CASEGOODS COLLECTION

by SOM Collaborative

The Medio Casegoods Collection represents the latest evolution in the Medio line introduced to the market in 2005.

As in the Medio Conference and Training lines, the smart drawer remains a feature, allowing users to hide wires and cords neatly whilst working. While the wireless age is certainly upon us, there are still many laptop computers and peripherals that require power or data cords.

Much computer work requires a lower level of lighting intensity and reduction in contrast. The casegoods collection includes an option for indirect room lighting from the top of the work wall cabinets. This lighting will be conducive to digital work.

The casegoods collection introduces the "Elevated Rail" integrated into the work wall. The rail is intended to accommodate track task lighting and movable monitor articulated support arms.

Also new is a hutch design integrated into the work wall. The sides of the work are full depth to create a finished boundary to the credenza surface and the lighting and monitor supports.

There remains, as with all Halcon furniture, a high degree of customization with a large number of configurations and finishes available.
