

Our Heavy Float Glass is available in thicknesses from 5/16 inch to 3/4 inch.

## Heavy Float Glass for Residential and Commercial Applications

Our heavy float glass offers increased strength, yet outstanding clarity. In certain wind load areas, AFG heavy float glass may be specified instead of heat strengthened or tempered glass. Available in a variety of thicknesses from 5/16 inch up to 3/4 inch, our heavy float glass offers superior strength and durability with greater spans, high daylight transmittance, enhanced noise suppression and reduced light deflection when compared to thin float glass.

With modern manufacturing facilities strategically located across North America, AFG provides a wide variety of heavy glass products for Residential and Commercial applications. From tabletops and shelving to aquariums and storefronts, AFG provides the right glass to meet a variety of needs.
