thermolam

THERMAL CURE Powders for Wood Products

Thermolam powder coatings were developed to powder coat wood and wood products using a traditional thermal cure. These powders are ideal for MDF as well as other woods such as oak and maple. Thermolam powders are extremely durable and are available in a range of colors and textures. They are reclaimable, safe and environmentally friendly. Most importantly, Thermolam powders are backed by the technical and service expertise that has been the hallmark of Protech's technical leadership in the powder coating industry.

ADVANTAGES

- Environmentally friendly - no solvent emissions
- One coat application process
- Compatible with conventional powder application systems
- Excellent application characteristics and durability
- Wide choice of appearance capabilities
- Less sanding required for MDF products
- Significant energy, time and space savings
- Low temperature cure permits wide range of wood substrates to be powder coated
- Design friendly--provides excellent edge coverage on conventional and multi-faceted pieces
