GLOBALContract

*Point™ is a technically refined seating series with an ergonomically contoured mesh back*

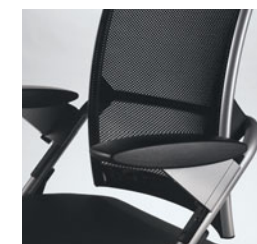

**Back Height and Seat Depth Adjustment**  
With one control element on the right and one on the left, adjusting the depth of the seat and height of the backrest can be perfectly synchronized.

**Armrest**  
Adjusts individually at the touch of a button independently of the synchronized body-size adjustment. Foamed polyurethane armrests are comfortable and pleasing to the touch.

**Seat and Back Controls**  
Adjust the height of the seat with the right control located under the seat. The tilt-lock control on the left adjusts the angle of the seat and back. Adjust the spring suspension to suit the user's body weight with the tension control knob.

**Mesh Back**  
The airy transparency of the taut netlike webbing backrest is made from Trevira-CS. Also available in upholstered back.

Point combines its striking form with a lightness of design and mature ergonomics. Airy transparency of the netlike webbing backrest designed in the shape of a taut sail communicates elegance and harmony. With its patented synchronized size-adjustment system,

Point offers excellent seating quality. The decisive advantage of Point is its unique adaptability to every body size. Operating the adjustment is simplicity itself because the controls can be reached comfortably from the sitting position ensuring accuracy. Point features

individually adjustable arm rests. The height of the armrests can be selected individually and independently of the synchronized adjustment system.
