†Water hook-up fits in back air clearance when calculating installation depth.

If installed against a wall, allow clearance of 10-3/4" on freezer side to remove bin.

Clearance required to remove fresh food full-size pan without disassembling is 15".

Allow additional space for any necessary leveling adjustments.

### Rough-In Dimensions

#### Standard, New Construction and Replacement Installation

#### Installation Tips to Maximize the Built-In Look

- All wall/floor molding should be removed prior to installation.
- Water recess on rear wall recommended to prevent water line damage. 48" minimum length, 1/4" diameter water line tubing recommended.
- When possible, recess both copper water line and electrical outlet. (See local codes)
- Front and rear leveling legs are adjustable for the built-in look. (See owner's manual)
- If optional collar trim kit is to be used or anticipated, see collar trim installation on next page for different rough-in dimensions.

\*The rough-in dimension of 70-3/4" is minimum and is measured from the finished floor to top of opening (or the underside of the overhead cabinets). For Models with Trim Kit: If frameless style cabinets are planned for above the refrigerator, you may need to consider adding a maximum of 1/4" (71") to height of opening to allow additional clearance between cabinet doors and top of refrigerator trim when cabinet doors are in open position.
