

Mesh responds to your needs.

- For greater comfort
- For more design options
- For lighter weight

WORKING  
FOR  
YOU

■ The first all mesh high-density stack chair – for comfort and for light weight.

**A brief history of stack chairs.**

The first stack chairs had metal seats. Then wood, followed by plastic, and finally fabric over foam. A continuous evolution toward greater comfort. And now, KI is offering the ultimate stack chair material. Mesh. A mesh seat and back is unequalled for comfort. The mesh conforms to the shape of *your* body – not to a hypothetical *average* physique. Each Daylight chair becomes your Daylight chair – responsive to your shape and your size. Experience Daylight and experience the ultimate in stack chair comfort.

Ganging glides are standard and are a great aid in maintaining straight rows. Extremely light weight (9 pounds). Easy to reconfigure. Easy to stack. Stacks to 44 high. Transport dolly is available. Slight “give” to the back enhances comfort.

Daylight™ Stack Chairs

Daylight is the first chair of its kind to feature both a mesh seat and a mesh back. What does this mean to you? Exceptional comfort. Mesh conforms to and cradles your body. Daylight eliminates uncomfortable pressure points. And its open weave revives you with continuous ventilation. For cooler seating that looks cool, too.

A designer's dream.

Daylight weaves an exquisite mesh material around a clean, contemporary design. It blends seamlessly into various settings. Whether used as a solitary guest chair for a workstation or grouped en masse in an auditorium, Daylight's quiet “presence” adds an air of elegance to any environment.

Colorful choices.

Choose from a variety of powder coat colors for the steel frame. Or chrome. Whatever fits your aesthetic.

Purpose and possibilities.

Modern settings demand flexibility. That's why Daylight is amazingly lightweight. Simple to reconfigure. Simple to stack. Weighing just nine pounds, it's a chair to take anywhere.
