

How VaporSeal 309 Saves You Money:

The use of VaporSeal 309 on your project will reduce or eliminate these costs. Typically, VaporSeal 309 is installed at \$1 - \$2 per square foot!

Sq.Ft. Costs of Traditional Curing and Moisture Control Systems

Alternative Curing Method/Product	\$0.20 - \$1.00
Moisture Vapor Emission Control System	\$2.00 - \$5.00
Crack Repair*	\$0.50 - \$1.00
Quality Assurance Costs	\$0.50 - \$1.00
Additional Costs of Multi-source Accountability	\$0.10 - \$1.00+
TOTAL	\$3.30 - \$9.00+

How are we able to offer this unique and cost saving solution? To answer simply: Experience.

With over 25 years of experience on thousands of projects, Floor Seal Technology, Inc. (FST) can assume all of the risk involved with preventing and correcting excessive moisture vapor emission at a lower cost than a customer that is required to use several different products from multiple manufacturers. This is achieved by FST becoming involved in a project earlier, and assisting with implementation and coordination of the program's Quality Assurance measures.

FST is with you through the entire project! Even after the placement of VaporSeal 309, we follow-up with moisture testing prior to the installation of your floor coverings. Any areas emitting moisture beyond the limits of your floor coverings are treated with our long-time trusted MES 100, at no additional cost!

VaporSeal 309 complies with ACI 308R and passes ASTM C309!
