

JUST LIKE FOLDING YOUR HANDS

“It can be difficult to combine stability and flexibility in one product. For that reason, Plico is a story of consistency and uncompromising design. We quickly realised that the majority of folding tables on the market had either angled or staggered legs, or were supported by diagonal struts. In terms of design, it is the “easiest” way to make a folding table stable. But our vision was to create a beautiful and stable table that was also both space-saving and easy to handle. It was therefore necessary to invent a completely new folding principle inspired by the way we fold our hands, where you have to shift your fingers to make them fit each other.”

Whenever space-saving, easy handling and multi-functionality are paramount, the Plico table is the obvious solution. It is the ideal table for mealtimes, meetings, training and conferencing. A key design aspect of this table is its unique, concealed folding mechanism. The intuitive mechanism is a delight to operate and permits extremely simple, low stacking dimensions (each table takes up only 78 mm in height). The table's simple and elegant aesthetics make it easy to combine with a wide range of chair designs. The Plico table is designed by Boris Berlin and Poul Christiansen, the award-winning designers from KOMPLOT Design.

With a folded depth of only 78 mm the Plico table permits extremely flat storage.
