

1 + 1 = ONE

"There's a saying that a good designer is a person who looks at the same things as everybody else, but thinks something different. Therefore, I was determined to create a foldaway table that was radically different compared to the many traditional models with foldable legs mounted on the table top. From the beginning, I worked with the formula that 1+1 = one. This means: One part (the frame) + one part (the top) = one table. The result was a remarkably stable and elegant lightweight table that could fold within its own length. I was even surprised myself how easy the handling actually was..."

# SIMPLA

Simpla is a four-legged, lightweight table system with a lift-off top and a unique flat folding frame. It is intended for use in training, meeting and conference environments. The separate top and frame elements make the setting up and storing away an easy process even for just one person, probably the trainer him or herself! The folded frame has a thickness of only 79 mm, and with the purpose designed trolley, 8 tables can be wheeled away for storing thereby saving valuable space. Simpla won a Best of NeoCon award in 2001.

The lift-off tops and folded frames are placed on a transporter and can be rolled through a normal doorway.
