

# INSTALLATION INSTRUCTIONS

## PRESSURE ASSIST TOILETS

ATTENTION INSTALLER: PLEASE LEAVE THESE INSTRUCTIONS WITH THE CONSUMER

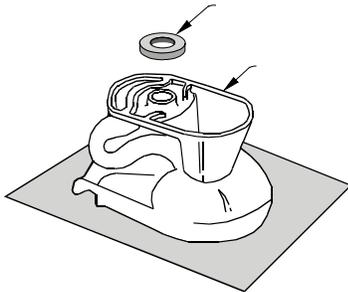

Thank you for selecting Crane Plumbing Products. To ensure this product installs properly, please read these instructions carefully before you begin. Be sure your installation conforms to local codes.

**REMOVE OLD TOILET:** Close toilet supply valve and flush the toilet. Sponge any remaining water from the bowl. Disconnect and remove supply line. If replacing valve, first shut off the main water supply. Remove mounting bolts and lift bowl off toilet flange. Plug waste opening to prevent sewer gas from escaping. Clean away old wax, etc. from installation area.

Before Beginning: The toilet is in two cartons. One contains the bowl, and the other has the tank, cover and assorted parts. **Assuming** that your bathroom has a four inch drain with a slotted toilet flange and cold water supply line in place, to complete your installation you will need the following items, not supplied: two closet bolts, wax ring or bowl gasket, supply pipe and shut off valve, toilet stop. **A Word of Caution:** The new toilet is made of fine china like the best quality tableware. It is ruggedly constructed: however extra care should be exercised during installation when rough handling and the danger of dropped tools threaten to chip or crack it. **Water Supply:** If your cold water line is through the wall, install an Angle Stop. If it is through the floor, install a Straight Stop.

### Installing the Toilet Bowl and Tank

**1**

Clean the immediate floor area thoroughly. Insert new toilet bolts in the slotted flange, bolt heads down. The toilet bowl should be placed upside down, on soft material to prevent scratching. Place the slightly warmed wax ring in the circular recess in the base of the bowl. **NOTE:** It is recommended that a wax setting ring with flange be used.

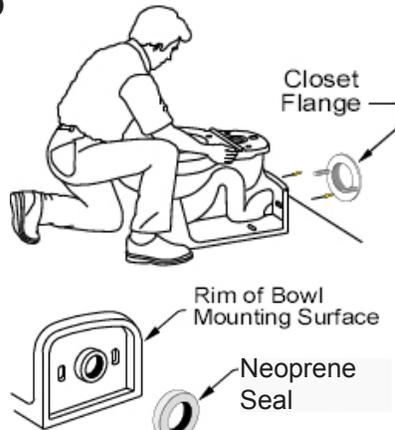

**2a**

Unplug floor waste opening. Gently place the bowl, right side up, in position with the toilet mounting bolts protruding through the holes in the china base. Press down, with a slight twisting motion, on the top center, with your full weight. Make sure the bowl is as level as possible. If needed, you can use wedges under the bowl to help leveling. Put the washers (Marked: This Side Up) and nuts on the bolts. Tighten them evenly and snugly.

**DO NOT OVERTIGHTEN NUTS, AS VITREOUS CHINA EASILY CHIPS AND CRACKS.** Pour water into the bowl to prevent the escape of sewer gas.

**2b**

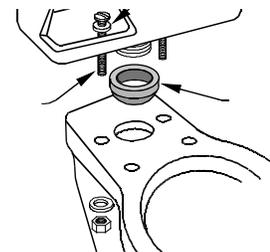

If the toilet you are installing is a "Back" or wall outlet unit, a closet flange must be installed in the wall 4" above the floor. The flange must be perpendicular to the floor, and aligned so the bowl mounting bolts will be parallel to the floor. To install, unplug the waste outlet and slide the bowl toward the closet flange so the bolts project through the bowl mounting holes. Install the washers with, "This Side Up" toward you and thread on nuts. Tighten the nuts alternating from side to side. **DO NOT OVERTIGHTEN. VITREOUS CHINA EASILY CHIPS AND CRACKS.** Pour water into the bowl to prevent the escape of sewer gas.

**2c**

Floor mounted, back outlet bowls must be fastened to the floor with Lag Screws (Supplied by others). Slip the plastic washer, marked side up, onto the lag screw and screw into pre drilled pilot holes.

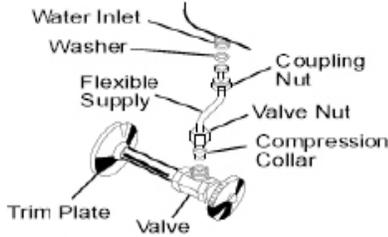

**3**

The tank should be inverted on the floor after removing the lid and parts bag. Open the plastic envelope and place the large doughnut shaped washer snugly on the threaded tank outlet. Invert the tank and place it on the bowl so that the large washer fits evenly into the bowl water inlet opening. Make sure tank is centered and properly sealed. Place the rubber washer on the bolts and insert the bolts downward through the bolt holes. Position the metal washer on each bolt. With tank parallel to wall, alternately finger tighten nuts. Using a Wrench, alternately turn the nuts until the tank is in contact with the bowl piers.

**CAUTION: Do Not Overtighten to avoid cracking china.**

4

Connect the cold water line to the tank with your straight or angle stop. Place the washer, then the plastic nut on the tank end of the connecting pipe and bend the pipe to fit into the inlet hole on the water regulator. Tighten all coupling nuts securely. **DO NOT USE PLUMBERS PUTTY!**

### 5 Adjusting Tank Filling Time

The tank pressure vessel has been designed and factory adjusted to provide a consistent, safe trap-seal and proper water depth in the bowl after each flush. Refill adjustments are not possible or necessary. The refill has been engineered and pre-set. All moving parts are inside the pressure vessel. Rarely does a vessel malfunction. If technical assistance is needed, please call the "800" telephone number listed on the pressure vessel. Place cover on tank. Place the plastic bolt covers firmly in place. Install the seat in accordance to the manufacturer's instructions.

**NOTE:** Check all connections for several days to detect any leaks which may develop. If they do, tighten all connections per instructions. Crane Plumbing, LLC is not responsible for leaking water connections. Also, after several days, remove the bolt caps from the bowl and tighten the nuts snugly.

## 10 Care and Cleaning of Vitreous China

Your new toilet is made of stain, acid and abrasion resistant vitreous china. But, like all fine finishes the china requires reasonable care. For day-to-day cleaning, wash with warm water, a soft cloth, and a mild detergent such as Handy Andy, Mr Clean or Lestoil. On stubborn stains, use one of the powdered detergents such as Spic & Span, on a damp sponge or scouring pad of nylon, saran, or polyethylene. Never use abrasive scouring powders, cleansers, or pads as they tend to create microgrooves that dull the finish and allow dirt to work into the surface. Use of tank cleaning products containing calcium hypo chlorite (chlorine) or any other reactive chemical shall constitute improper maintenance.

## WINTERIZING VITREOUS CHINA WATER CLOSETS.

**ALL WATER MUST BE REMOVED FROM THE TANK AND BOWL.**

**Prior to winterizing the bowl please refer to the pressure vessel manual provided with the tank for winterizing instructions.**

An anti-freeze solution must be poured into the bowl through the tank flush valve opening inside the tank to insure mixing with any water that may remain in the distribution area under the tank. Continue to pour anti-freeze solution until the level of solution in the toilet bowl stops increasing. There must be liquid in the bowl at all times to prevent sewer gas from coming through the toilet.

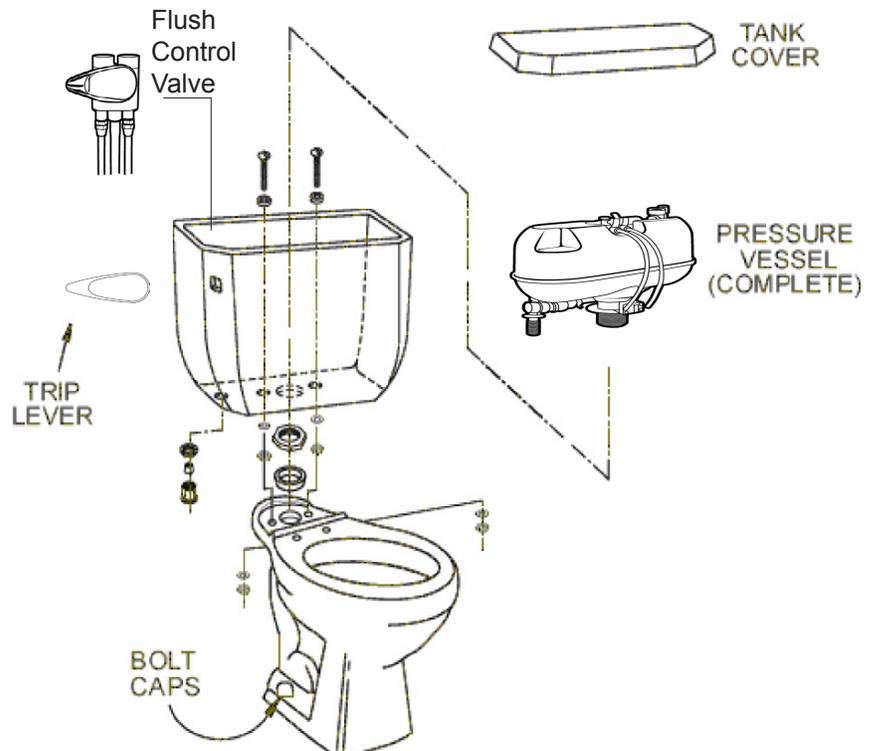

**NOTE:** It is recommended that RV Anti-freeze be used.

## REPLACEMENT PARTS

Please keep this manual for future reference. Retain product invoice in case warranty service becomes necessary. Record the Model Number of the toilet in this booklet. This will assist when ordering replacement parts, or in seeking technical assistance. Technical Assistance or Replacement Parts may be obtained by contacting:
