Shedding some light on Light Corporation

At Light Corporation, we have been enlightening the world's workspace since 1986. While our business started with designing and manufacturing fluorescent task lights and ambient light fixtures for the office furniture industry, we actually do much more than that. When we say we enlighten the workspace, **we mean we help to create an environment where workers feel comfortable and motivated—an environment that's warm and inviting—a place where work gets done safely and efficiently.**

Who do we think we are?

We think of ourselves as a progressive, customer-focused company. What does that mean? It means we provide cost-effective lighting solutions that improve productivity and energy efficiency. In short, we don't just turn on your lights; we turn on your whole operation.

We design lighting products for today and tomorrow. The things we do particularly well are product design, assembly and delivery. **Our 100,000 sq. ft. facility employs 125 people, is registered to ISO 9001:2000, ISO 14001, and is a Michigan Clean Corporate Citizen.** We are extremely proud of our environmental record.

healthy workplace

Lighting up your bottom line

Many of today's factories and warehouses suffer from "cave-like" conditions created by HID, HPS and Mercury Vapor lighting systems. By applying our knowledge and skills to the warehouse, gymnasium and factory floor, we'll not only brighten the work environment, we'll brighten your bottom line as well. **Effective lighting from Light increases worker productivity, enhances and brightens the work environment, reduces fatigue and promotes a safe and healthy workplace**—not just in the front office, but every place people work.

If 80% of what we do is based on the visual sense, shouldn't we do everything we can to better the lighting within these areas so that we can maximize our ability to see?

Lighting
increases

Why fluorescent?

Fluorescent light stays brighter longer. Over their 24,000-hour lifetime, fluorescent lamps maintain 94% of their luminosity as compared to 65% for HID. Fluorescent lights are less costly to operate, averaging 55% savings per fixture over HID.

Fluorescent light has a high color-rendering index—up to 85 compared to 65-70 for standard HID. This can be especially important in warehousing, where accurate reading of color codes and color-coded tags is essential for error-free operation.

Glare control. Fluorescent light provides clean, even lighting with fewer shadows and no 'spot-lighting.'

Instant on. Fluorescent light comes on instantly, unlike HID, which can take 15 minutes to reach full brightness.

Dimmable and occupancy sensor capabilities. Fluorescent lights further reduce your energy costs by allowing lights to turn off in low-activity areas.

Potential energy company rebates. Some energy companies offer rebates to companies who significantly reduce their energy demand.

Light's industrial fixtures are an ideal solution for high mounting applications and an excellent alternative to costly HID fixtures.

Some light reading about our products

The Semaphore industrial fixtures are an ideal solution for high mounting applications and an excellent alternative to costly HID fixtures. **Each fixture features fluorescent lamps and electronic ballasts, coupled with 96% reflectivity specular reflectors to create a high performance lighting system.** The Semaphore is designed to maximize lamp efficiency and optimize light output and is constructed with a lightweight corrosion resistant aluminum alloy.

Mounting options include a hook and chain application or Light's own Slip-Fit cable mounting system. A lens assembly or cage option is also available, ensuring the protection of the fixture's lamps.
