

Skip system

Skip is a bookcase system based on the concept of equipped wall panelling, which can be completed with shelves, units and sliding doors. The principal aesthetical characteristic of the system is the minimal thickness of the shelves, endowed with the rail that allows the integration of the sliding doors. The range of the modular elements includes: floorbenches, freestanding or hanging units with flap doors or chest of drawers, hanging shelf writing desks. The vertical dividing elements, that can be freely positioned, allow modifying the compositions, creating open units that are able to assume various functions.

design Studio Kairos, 2009

The bookcase Skip, design Studio Kairos, is a project that offers an exceptional variety of modular solutions for a conception of the day area based on individuality.

Finishings:

Bookcase with modular system realized in spessart oak and matt lacquered colours.
