

FLEX BACK

*A little give goes a long way.*

PATIENT SEATING

## DESIGN INSPIRATION

Flex Back seating's design intent is to provide the comfort of a flexible chair in a small footprint, helping to conserve the already limited space in patient rooms and other healthcare spaces. Taking a different approach to providing comfort, the back of the chair flexes separately from the seat to create the support of an adjustable chair without the need for adjustment. The result? An outstanding sitting experience for users.

Flex Back is available with a high or low back in two frame styles, the heritage style featuring subtly curved lines and the contemporary style featuring smooth straight lines.

## FEATURES AND BENEFITS

**ELEGANT** Solid maple frame, arms, and legs create a durable platform with aesthetic appeal.

**COMFORTABLE** Unique back design allows chair back to flex separately from the seat for the ultimate in user comfort.

**ACCOMMODATING** Arm caps overhang the legs to provide a comfortable grip for ease of entry and exit from the chair.

**CLEANABLE** All models feature a generous clean out space between the seat and back for easy cleaning.

**CHOICES** Additional options include moisture barrier and contrasting fabrics on the seat and back.

## STATEMENT OF LINE

*Refer to Nurture specification guide for complete product details.*

## DIMENSIONS

### Contemporary Arm Chair

	overall depth	overall width	overall height	seat width	seat height	arm height
