**ECLCP (Chicago Plenum)****Emergency Circuit Lamp Module**

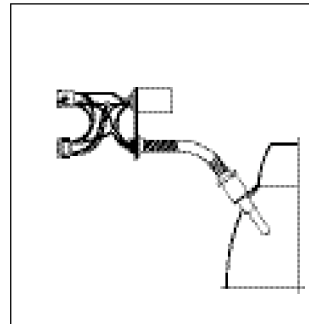

Emergency circuit lamp module for operation and control of 100W, 120V D.C. bayonet base T4 quartz lamp by an emergency circuit. Use with CP (Chicago Plenum) housings. Module includes lamp, socket, wiring, and enclosed and gasketed F.M.T. (Flexible Metal Tubing). Specify X option reflector as noted on individual specification sheets.

**ISL50150****FIELD INSTALLED INTERNAL QUARTZ LAMP RESTRIKE SYSTEM WITH TIME DELAY RELAY**

Internal auxiliary 100W, 120V D.C. bayonet base T4 quartz lamp provides temporary low-level illumination in the event of a momentary power interruption. Use with 50W through 150W magnetic ballast housings. The quartz lamp operates for several minutes until the HID lamp restrikes. This field installed kit includes relay, lamp, socket, BX cable and all necessary hardware. The relay assembly replaces a junction box cover. Plug-in connectors eliminate the possibility of mis-wiring. With 277V or 347V service, the transformer in the ballast provides 120V to the quartz lamp (magnetic ballasts only). Specify X option reflector as noted on individual specification sheets.
