

Curtain Measurement Specification

Standard Construction Specifications

Top hem – 1 1/2" wide, triple thick, double lock stitched

Side hem – 1 1/2" wide, double thick, single lock stitched

Bottom hem – 1 1/2" (38mm) wide, double thick, single lock stitched

Vertical seams (when applicable) 1/2" (38mm) wide, double turned and double lock stitched

Grommets: #2 rust-proof metal grommets spaced 6" (152.4mm) on center

Curtain Construction

All stitching will be performed with lock stitching machines.

Edgings and hems are tacked assuring a top quality product that will provide outstanding durability for years.

Patterned nylon mesh has integral webbing at the top and bottom to ensure long lasting durability. The mesh is sewn to the body of the curtain using a double needle interlocked stitch, which ensures that the curtain will have a finished look that will be durable.

All curtains are inspected for quality construction prior to being packaged in clear plastic bags to guarantee the customer receives a clean curtain at the time of delivery.

Curtain Drop

If mesh can not be used on a curtain, nickel plated drop chains can be specified.

Cubicle Curtain Fabrics

Cubicle curtains are both permanently and inherently flame resistant. Launderable at 160°F, the fabrics meet NFPA 701 small scale.
