Type:

Project:

Rectangular 3 5/8" x 4 1/16"

LLML

UNIVERSAL MOUNTING BRACKET (F1)

Standard mounting for T-bar (grid) ceilings

HORIZONTAL J BOX MOUNT (F2)

Optional mounting for hard ceilings

Caution:

- Ceiling must be adequately reinforced at support locations — by others.
- Junction box may be subject to additional loads during installation and relamping.

WEIGHT AND SUPPORT SPACING FOR SOFTSHINE ROWS

A row will consist of a starter, joiner(s) if the row is long enough, and an ender section. Support locations for each section type are shown below.

WEIGHT AND SUPPORT SPACING FOR SOFTSHINE ROWS CONT.

To determine suspension spacing:

1. Check catalogue number for **row length** and **max section type**

Example: LLML 1 28T5 SSH **24FT4IN** **R12** 277 GEB10 SCT LP835 F1/18 C100

row length **max section type**

2. Check chart below to determine the type, quantity and length of sections per specified **row length** and **max section type**.

3. To determine the support locations, layout the row based on the required section types and lengths for the row length. Note that starter and ender section lengths differ from joiner lengths. A row will always end with the smallest section type (E4<E8<E12).

Note:

If a suspension point falls on the ceiling grid, adjust the provided fixture joining hardware to move the suspension point.
