

HERMAN MILLER OUTDOOR FURNITURE CARE AND MAINTENANCE

We hope you enjoy the beauty of your Herman Miller outdoor furniture. To ensure a quality crafted product, we use only materials that meet the highest standards for durability and strength.

With regular care and maintenance, your Herman Miller furniture will provide years of superior performance and satisfaction. To maintain the quality of your Herman Miller product, please follow the cleaning procedures provided below.

The instructions for the care and maintenance of Herman Miller products are provided to you as a service. No warranty is implied, since results may vary.

Eames® Aluminum Group Chairs Outdoor

Products in the Eames Aluminum Group Chairs Outdoor include Side Chair Outdoor, Lounge Chair and Ottoman Outdoor. These products feature Herman Miller suspension technology for the ultimate in comfort and support.

The Value of Caring

The materials of the Herman Miller outdoor furniture are built for strength and durability. The construction results in long-lasting and easy-to-clean products.

Please note that suntan lotions and sprays, as well as insect repellants, may discolor the chair material.

Acid-based liquids, such as coffee, wine, and fruit juice, need to be wiped up immediately using a clean, soft cloth. The longer a spill remains, the more difficult it will be to remove and may stain.

Chairs – Outdoor Weave Mesh Material

Cleaning

For normal cleaning, use a solution of 1 tablespoon of Tide detergent powder (unscented) that has been diluted in 1 cup of warm water. Dip a clean, dry cloth into the solution, and wipe the Outdoor Weave mesh material. After cleaning, rinse the mesh material and the entire chair with clean, warm water, and wipe dry with a clean, soft cloth.

Do not use abrasive, acid, alcohol-based, or solvent-based cleaners; they could damage the mesh material.

Do not use a power washer to clean Aluminum Group Outdoor chairs; it could damage the mesh material.

Note: do not leave your Aluminum Group Outdoor chair standing in water.

Ultraviolet (UV) and Fading

When you're not using your Aluminum Group chair, we recommend covering it to avoid prolonged exposure to direct sunlight.

Storage

We recommend you bring your Aluminum Group chair indoors for storage if the temperature stays below 40 degrees Fahrenheit (5° Celsius) for an extended period.

Chairs – Arms, Frame, and Base Finish

Cleaning

We recommend normal cleaning at least once a year. For normal cleaning, use a solution of 1 tablespoon of Tide detergent powder (unscented) that has been diluted in 1 cup of warm water. After cleaning, rinse the metal with clean, warm water, and wipe dry with a clean, soft cloth. For added protection or to remove scuff marks, apply with pre-softened paste wax, such as Meguiar's Cleaner Paste Wax, following the manufacturer's instructions. Take care not to get wax on the mesh material.

Do not use abrasive, acid, alcohol-based, or solvent-based cleaners; they could damage the paint finish.

Do not use a power washer to clean Aluminum Group Outdoor chairs; it could damage the paint finish.

Note: do not leave your Aluminum Group Outdoor chair standing in water.

Ultraviolet (UV) and Fading

When you're not using your Aluminum Group chair, we recommend covering it to avoid prolonged exposure to direct sunlight.

Tables Outdoor

Stone Tabletop

Products using stone for outdoor furniture tabletops of marble, granite, and slate include Eames Tables Outdoor, Eames Wire Base Low Table Outdoor, and Nelson™ Pedestal Table Outdoor.

Stone Is a Natural Material

As with any stone product, there are a few special points to consider.

Natural characteristics in stone cause variations in hues, veins, crystals, and distinctive marks. These variations and subtle changes seen as the stone ages are values associated with natural materials.

Each tabletop is hand crafted. No tabletops are identically the same, just as no stone pieces are the same. Variations in both color and veining are to be expected.

The marble, granite, and slate used on our products are inherently strong and stable. Stone is a natural material that will age, adding character to the product.

Over time the stone may fade in color, staining of the surface may appear, and surface cracks -- if not already visible at time of purchase -- may appear. Small cracks do not affect the structure of the tabletop.

The Value of Caring

Stone tabletops are naturally beautiful and timeless. Herman Miller outdoor stone tabletops are treated with a sealer that penetrates deep into the porous surface. To maintain the quality, it is important to care for your product properly.

Stone tabletops are susceptible to staining. Suntan lotions and sprays, as well as insect repellents, may discolor the finish.

Acid-based liquids, such as coffee, wine, and fruit juice, need to be wiped up immediately using a clean, soft cloth. The longer a spill remains, the more difficult it will be to remove and may stain.

Cleaning

Rinse the tabletop with warm water to remove surface dirt and wipe dry with a clean, soft cloth for routine maintenance.

For normal cleaning, wash with a soft cloth and a mixture of a mild detergent and warm water. Rinse with warm water, and wipe dry with a clean, soft cloth.

Do not use abrasive, acid, alcohol-based, or solvent-based cleaners; they will damage the surface.

Ultraviolet (UV) and Fading

We recommend that when not in use your Herman Miller stone tabletop be placed away from the sun or appropriately covered.

UV light can be a cause of outside environmental damage and fading to your stone tabletop. Over time, stone tops will fade in direct sunlight.

To check if your stone tabletop requires resealing, pour a small amount of water onto the table. If the water still beads, resealing is not necessary. If beading does not occur, we recommend a natural stone sealer (available at hardware and home improvement stores) to rejuvenate a faded stone tabletop

Storage

If you choose to cover your stone table, be sure to remove the cover when the weather is warm or humid to reduce the chance of mold and mildew growth.

Do not keep your stone table out of doors below 40° Fahrenheit (5° Celsius) as the stone may be compromised.

Table Base

Base Finish

The base materials of the Herman Miller outdoor furniture are built for strength and durability. The construction results in a long-lasting and easy-to-clean base.

Coated Metal

For normal cleaning, wash coated metal surfaces with a soft cloth soaked in detergent and warm water; rinse thoroughly and dry.

Remove scuff marks from low-gloss coatings with pre-softened paste wax, following the manufacturer's instructions.

Remove scuff marks and scratches from high-gloss coatings using automotive polishing compounds, either liquid or paste. After polishing, apply a pre-softened automotive paste wax to restore original sheen.

Do not use abrasive, acid, alcohol-based, or solvent-based cleaners; they could damage the paint finish.

Do not use a power washer to clean Aluminum Group Outdoor chairs; it could damage the paint finish.

Note: Do not leave your Herman Miller outdoor table standing in water.
