

NEVERS | Symposia™

Y/TPE/18036 WITH PREMIUM KNIFE EDGE AND R/PV5/07, METAL INLAY IN TOP AND BASE

The Most Refined Tables Begin with Your Imagination.

Symposia tables are modeled in the spirit of the great ancient philosophers and thinkers. They are open for discussion and they are open ended. They are shaped for spirited debate, formal presentation and deeply engaged problem solving. These tables are created for generous workspaces, integrated power, data and connectivity, steadfast construction with luxurious legroom and full height modesty panels and geometry that is designed to foster brilliant thinking.

Individuality and Variety.

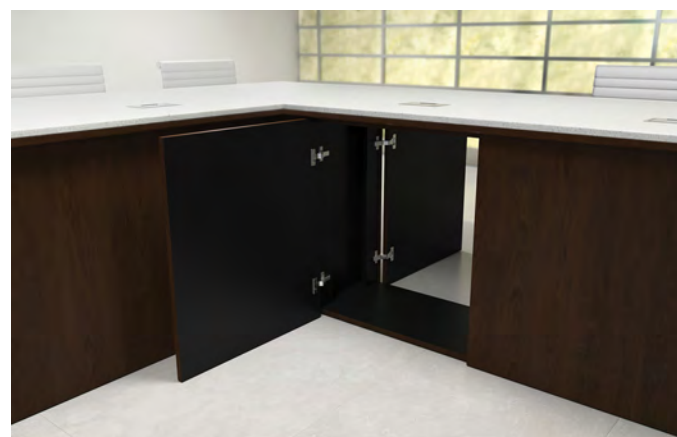

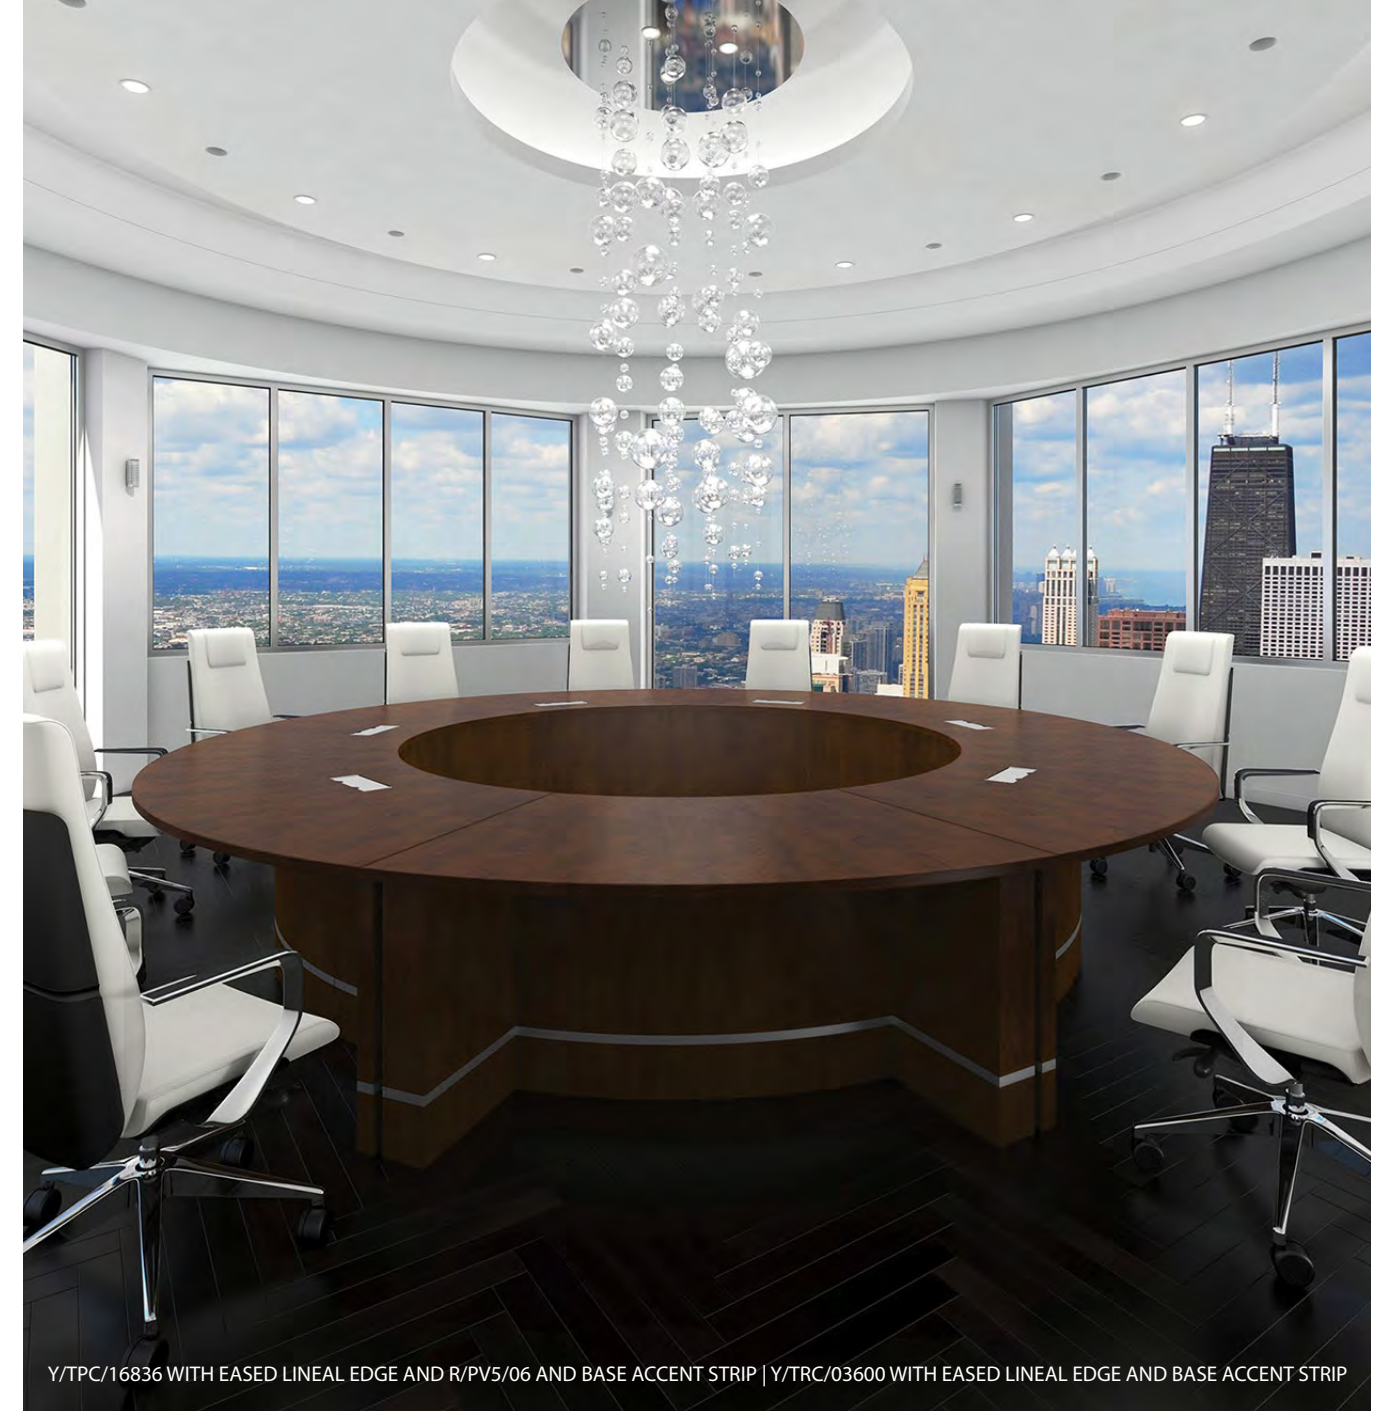

Since companies and conference rooms come in different sizes with different personalities, Nevers offers each of them a solution that works best for that room and that company culture. Choose Open Centers for lively debate and discourse. Choose massive table tops for reviewing maps, models, drawings and enormous legal cases. The Symposia Collection offers seven conference table geometries with solid table tops and eleven options for presentation and open centered tables.

Convenience and the Small Details.

Symposia tables contribute to the meeting. They function intelligently and with features that add value. Tables are offered with removable sections to seat additional guests when needed, to allow a speaker to present from the center of the table and to host different groups of thinkers in the same room by adding or subtracting a section of the table. The pass through door allows the cleaning crew to vacuum the center of the open table or retrieve errant papers, while a pencil ledge prevents those errant papers from falling off the table surface. Luxurious legroom is achieved without projecting panels so thinkers can work comfortably longer, or work closer together without hardware in the way.

Y/TCC/12072 WITH PREMIUM KNIFE EDGE, METAL INLAY IN TOP AND R/PV1/01

Relentless Design.

Symposia tables are as individual as your organization. Even a basic table exhibits personality – as shown on these pages. Nevers offers a tremendously generous selection of standard sizes, bases, and design features. Table tops are offered in woods with exquisite stains and finishes, in glass, in stone, in laminate with grain pattern inlay, metal inlay, ebony inlay and a full collection of edge profiles. Table bases are offered with architectural options like plinth base, traditional molding trim, recessed reveals, metal inlays, metal laminates, color coat finishes and accent strips. There are endless custom options available after that.

Intelligent Technology.

Nevers was the first wood table house to integrate technology into conference room tables, and we are still the industry leader. Our technology department and our industry partners ensure that your specifications for IT/AV are achieved by working hand in hand with you and your IT/AV specialists. The continuous full height base allows independent wire management on multiple levels to reduce static interference, convenient access with hinged doors adjacent to every power unit and the ease of integrating technology into the base prior to the top being secured. In addition, the continuous full height base allows monitors to be mounted on the interior of the base allowing every thinker seated at the table to have the perfect viewing angle and the best seat in the room.
