### PRODUCT DESCRIPTION

The Orion style wave form is a visually stunning material upon which light dances and varies in color and dimension as you move around it. The fixtures are a Fire Farm invention of alternating layers of metal wire cloth and a proprietary light-manipulating dichroic diffusing film. This combination of materials captures the light, breaks it into its rainbow of colors and bounces it amongst the folds in the crumpled metal mesh. As you move around the fixtures, the light shimmers and changes from magenta and blue when back-lit, to yellow and green when lit from the front.

The panels can be made up to 44" wide without a seam to whatever length you require. Wider widths are available but would have to be sewn together. The number of panels, shape and orientation can be adapted to fit your space. The Orion wave is a sculptural architectural element designed to work with recessed lighting, spot flood, or an internal net of point source lights.

Each panel sold separately.

### SPECIFICATIONS

**STYLE CODE** 22802-01  
**MANUFACTURED IN** USA

**OVERALL DIMENSIONS** 44"W x 72"L (each panel)

**OPTIONS** Contact Fire Farm for Options
