Cleaning Code : WS

Water based cleaning agents and foam may be used for cleaning. This fabric may also be cleaned with mild, water-free solvents.

Cleaning by a professional service is recommended.

or

Cleaning Instructions: INCASE™ CRYPTON® TECHNOLOGY

Most new stains come off with a damp cloth and water. There is one suggested cleaning method that is universally and easily available – the use of enzyme detergent (listed below).

For Spot-Cleaning:
- Mix five parts water with one part enzyme laundry detergent (e.g., Tide® or Cheer®) to form a mixture that works well on most stains. Follow these simple steps:
- Remove excess soil and apply the soap mixture to the stained area
- Allow solution to remain on stain for one minute
- Blot up the stain with a dry, white towel, rinse any remaining soap and blot the area again
- Repeat if necessary

For Laundering:
Although INCASE™ fabric protection provides sustainable, durable performance even after repeated washings, not all fabrics protected by INCASE™ are machine-washable. Always refer to specific fabric care guidelines prior to washing.
- Pre-wash or treat the stained area with the appropriate Crypton cleaning agent or enzyme detergent mixture
- Rub solution into the stained area
- Follow washing machine directions – cold-water wash, spin-cycle drying
- Allow the fabric to air-dry (avoid excessive heat when using commercial dryers)

We know from experience that every facility has preferred cleaners and cleaning practices. Our engineers have tested hundreds of products to ensure they won't harm textiles, specifically Crypton. If there is a special cleaning agent you plan to use with a Crypton INCASE™, or for more information, contact us at inquiries@arc-com.com
