

Ultra-clear Solite is stipple patterned for obscurity

## Solite®

AFG's Solite® solar glass is a low-iron, rolled product formed with a stippled pattern on one surface. The stipple effect provides the desired obscurity while retaining high transmission values. Solite is the product of choice for most active applications where obscurity of the absorber plate in active solar panels is an important factor.

AFG Industries, the world's leading producer of solar glass, has been supplying solar glass products since 1972. AFG is dedicated to producing quality solar glass products suitable for photovoltaic, commercial greenhouse glazing, and active or passive applications. AFG solar glass products are affordable, durable and virtually maintenance free.

Solar glass products from AFG are ultra-clear, non-flammable and fully temperable. The material composition and low-iron content of AFG solar glass provides a near colorless product which allows for superior light and energy transmission rates.
