

Solatex[®]

AFG's Solatex solar glass is formed with smooth rolls to create a glass surface having a lightly textured finish. The light textured surface pattern of the Solatex glass provides excellent light diffusion, which allows slightly higher transmission values at acute angles of incidence. Solatex is recommended for those applications where ultimate levels of transmission are required. The texture of Solatex glass creates an excellent surface for adhesion of solar panels. It is used effectively in flat plate solar collectors, photovoltaics, and commercial greenhouses. Solatex is fully temperable and conforms to federal specifications.

AFG Industries, the leading producer of solar glass, has been supplying solar glass products since 1972. AFG is dedicated to producing quality glass products for active, passive and photovoltaic applications. AFG solar glass products are affordable, durable and virtually maintenance free.

Solatex is excellent for Solar Panels.
