ABOUT

DESIGN PROCESS

Our Cradle to Cradle manufacturing system starts with sophisticated designs from leading industry designers and in-house design and engineering departments. Each design flows from the natural strength and beauty of wood, and is the result of extensive research on the unique requirements of healthcare facilities. We work with designers and customers to select products and configurations for their interiors that provide a sustainable design solution.

David Edward understands that healthcare furniture must be durable, lightweight, easily cleaned or reupholstered, and above all, comfortable - particularly for patients and seniors. Our lines include products in a wide variety of price ranges and hundreds of possible configurations to suit any space. From initial design through manufacture and installation, we have complete quality control every step of the way through our vertical integration. 100% Designed and Made in America. David Edward's Healthcare Collection is entirely created in our own facilities starting from raw wood to delivery in our truck.

QUALITY

- Long lasting strength from mortise and tenon joinery, providing 60% more bonding area between joints than dowel joints
- Catalyzed varnish finish system that hermetically seals the wood and is impervious to alcohol, blood, bleach solution, urine and other fluids
- An ultraviolet inhibitor protects the wood from sunlight preventing fading and cracking in desert conditions or humid areas
- Flame resistant codes that meet all fire codes, including Cal 133, Cal 117, and NAFFP can be easily accommodated
- All of our products meet and exceed the ANSI/BIFMA tests - David Edward utilizes an internal testing lab backed up by certified third party testing organizations

AVAILABLE SPECIFICATIONS

- Bariatric Seating is available on all of our designs
- StaphCheck[™] Moisture Barrier provides a hermetically sealed barrier for incontinence requirements
- Fire Code - Cal 117 available at no additional charge. Cal 133 and NAFFP are available, contact Customer Service for pricing and lead time.
- Variable Foam Package Densities with optional soy based or all natural latex rubber
- Teflon protective coatings, solid surfaces, and metal components are all available
- Field re-upholsterable designs for longevity and maintenance can be accommodated, as Sustainable Design is our underlying mandate in all of our product designs
- Non-ferrous product designs allow our designs to be incorporated into Radiology departments
- Hip stools have been developed to match our best selling models

BARIATRIC OPTIONS

SEATING

The need for Bariatric seating in today's modern healthcare facility has greatly increased over the years. According to a study done by the Centers for Disease Control and Prevention, an estimated 35% of adults, and almost 17% of children and youth are obese. These growing statistics indicate the need for hospitals and other healthcare facilities to consider the Bariatric patient when designing their spaces.

An important part of Bariatric seating, in addition to holding a large weight capacity, is the need for Bariatric seating to mesh well with the other furnishings to make patients feel comfortable and remain confident and dignified when entering into any healthcare facility. David Edward offers standard Bariatric seating with three of our already existing collections, while our vast knowledge of custom capabilities enables us to modify ALL of our products to meet the stringent demands of high density Bariatric seating. These abilities will allow the designer to create a beautifully designed healthcare space suited for patients of all shapes and sizes.

FEATURES:

- Dimensions and structure engineered for Bariatric use
- Steel reinforced framework adds stability to the chair
- Upgraded foam package to a highly resilient urethane foam for additional support.
- Meet and exceed ANSI-BIFMA tests.

TESTING DATA:

Static Test (Dead Load) - 1,400 lbs.

Structural Durability/Cyclic - 100,000 cycles, side to side force

Drop Test/Dynamic - Heavy impact abuse each seat, 300 lb. drop test

Back Strength/Vertical Static - 600 lbs. and 900 lbs. back pull

Back Durability/Horizontal Cyclic - 120,000 cycles, 225 lbs. back pull

Back Durability/Vertical Cyclic - 10,000 cycles, 200 lbs. force

Back Strength - 150 lbs. and 750 lbs. back pull

LEVEL 1 -

Upgrade seating capacity to a live load of 350 pounds per seat, a settee equates to a load of 700 pounds per seat.

LEVEL 2 -

Adds additional inches to the width of the product while upgrading the seating capacity to a live load of 500 pounds per seat, a settee equates to a load of 1,000 pounds per seat.

LOUNGE:
Increase width 12"

PULL-UP:
Increase width 8"

HOW TO READ PRODUCT NUMBERS:

David Edward has developed an easy to use numbering system when referring to the different Bariatric Levels. This system will help to make sure that you are getting the correct package with your order.

See below for examples:

09113-B1 = Open Arm Gower Lounge with Bariatric Level 1 Package

72993-B2 = Open Arm Aussie Pull-Up with Crumb hole Back and Bariatric Level 2 Package

STANDARD BARIATRIC PRODUCT LIST:

09114 Gower Lounge

92214 Bridgeport Pull-up

09214 Gower Lounge

92114 Bridgeport Pull-up

11914 Aussie Lounge

93124 Gower Pull-up

29114 Bridgeport Lounge

93114 Gower Pull-up

29214 Bridgeport Lounge

72994 Aussie Pull-up

On a custom basis; any David Edward product can meet Bariatric specifications.

CUSTOM CAPABILITIES

The custom design option is uniquely capable of reconciling the conflicting demands for maximum value and innovative aesthetics and functionality. Custom designs can provide an exclusive look, harmonious integration with architectural details, and optimal space utilization; often, they become original expressions of a company's individualization. The custom process also offers the opportunity to develop a comprehensive standards program that can address a variety of issues including price inflation control, long-term availability, inventory control, quick-ship or guaranteed deliveries, long-term maintenance and quality assurance.

Contrary to popular impression, custom work does not invariably mean premium pricing. To the contrary, because budgetary requirements are an integral focus of the developmental process, custom orders are typically very competitive in price with orders of stock designs.

It is unnecessary, therefore, to make aesthetic or functional compromises to accommodate budgetary realities. By focusing attention on all aspects of the project - aesthetics, function, and budget - a custom solution can achieve the best possible value for the amount of money spent.

CUSTOM STEPS:

THE REQUIREMENT:

Revision to existing design or a total custom project

THE DESIGN BRIEF:

Establishes all of the parameters for the project - aesthetic considerations, function, quantity, size and scale, budget, wood specie and finish, fabric or leather

SKETCHES:

Concept sketches to you within 24 to 72 hours

DRAWINGS:

Full-scale drawings with detailed specifications and a written cost/logical quote to you within two to five weeks

PROTOTYPE:

Building the prototype and revising it until you are satisfied takes a week to six weeks, and costs range from \$500 to \$2,500

EVALUATION:

Finished product is evaluated using the Design Brief criteria

The result of this meticulous process, with its many controls and evaluations, is a product that successfully fulfills your requirements in a way that no stock product ever could.
