

MAKING THE BRIGHT CHOICE

LightCorp's capacitive touch dimming feature puts you in control of perfect lighting throughout the day. Located on our Amble*, Revo, Voyage, Tino and Reed Premier products, the touch and hold button allows for light output adjustability from 15%-100%.

HOW IT WORKS

- A quick tap of the finger is all you need to toggle the light on or off.
- To adjust the brightness levels simply place your finger on the raised power button and hold. The fixture will dim down to 15% output and cycle back to 100%.
- Upon release, the last state will be remembered for the next time the fixture is turned on.

* Amble's light output adjustability ranges from 20%-100%.
