

# Architectural Solutions Specification Guide

## Availability

**Electronic price list updated** with release 184.H (U.S.) and 148.H (Canada), dated October 16, 2017.

Spec News is available on [village.steelcase.com](http://village.steelcase.com). Search Steelcase Marketing Resources (Adstock) and download the current release's Spec News.

*Tip: Steelcase Marketing Resources is a new global platform for ordering Steelcase marketing materials that replaces Adstock.*

View or download Steelcase Specification Guides at <http://www.steelcase.com/en/resources/design/spec-guides/pages/specguides.aspx>.

Transitional products in this specification guide are **maintained for existing customers only** and are likely to be phased out over time. These products are indicated with a . Products that are scheduled to be culled are indicated with an , followed by the last order entry date.

## Surface Materials

**The surface materials team** has announced the launch of the Finish Library, found at <http://finishlibrary.steelcase.com>.

► For a list of all trademarks, refer to the last page of this specification guide.  
© 2017 Steelcase Inc.

### For Canadian Pricing

Canadian factor can be found at [steelcase.com/CADpricing](http://steelcase.com/CADpricing).

Calculate in the following order to avoid rounding errors:

- Multiply the base price and each option by the Canadian factor.
- Round each to the nearest dollar.
- Add base and options for total list price.

# Ten Tips: How to Get the Most Out of This Book

## Tip 1

**Watch** the tabs on the right-hand edges of the pages. They'll always indicate which chapter you are in.

## Tip 2

**Use the Statement of Line pages** for an overview of the available components, their sizes, and page references for additional information. Each *Understanding* chapter includes a statement of line after the table of contents.

## Tip 3

**Find cross references** by looking for page numbers flagged with an arrow.

## Tip 4

**Study the product detail pages** in the *Understanding* section to learn everything an expert knows about specific products. Each product detail page in this section contains the following features, where applicable:

- Product Drawing
- Actual Dimensions
- Product Details
- Connections
- Wiring and Cabling
- Surface Materials
- Application Topics

**Product Drawing** shows you what the product looks like and points out important features.

**Product Details** gives specific information on the product and how it is used.

**Connections** describes how the product is assembled or how it attaches to another product.

**Actual Dimensions** table lists the dimensions of the product.

**Wiring and Cabling** details the power and cable-management and cable routing capabilities of the product.

**Surface Materials** lists what material is used for each part of the product.

**Tip 5**

**Refer to the specifying pages** for all the information needed to order a product. Each product specifying page contains a variety of elements to help you complete a specification:

- Product Drawing
- Standard Includes
- Required to Specify
- Options
- Related Products
- Specification Information
  - Dimensions
  - Style Number
  - Price

**Standard Includes** (under the red or dark grey band) provides a list of what comes standard with the product.

**Required to Specify** (under the red or dark grey band) itemizes the information that you must provide to order the standard product and the preferred sequence for specification.

**Specification Information** (under the teal or light grey band) provides product dimensions, and prices for the standard product and any surface material choices that are available.

**Product Drawing** shows you what the product looks like.

**Base Horizontal Frame Packages—Thin Trim**  
or Panel Packages

Standard Includes		Required to Specify	
• Panel height • Product finish • Base trim with no brackets (on SPW) panel price • Glass 1/2" with maximum pan view to 2000 panel price • Glass 3/4" standard connecting base panel only	• Base trim height • Glass number • Glass color • Glass finish • Glass thickness	• Glass number • Glass color • Glass finish • Glass thickness	• Glass number • Glass color • Glass finish • Glass thickness

**Options**

Options	U.S. Price	Required to Specify
• Glass panel group 1	No cost	Specify glass panel number
• Glass panel group 2	-10	Specify glass panel number
• Glass panel group 3	-100	Specify glass panel number

**Options** (under the black band) lists all the options that apply to the product, their price, and what is required to specify.

**Related Products** provide specification information for products that are directly related.

**Tip 6**

**Required to Specify**

Specify with *Customiz Stain*

**Italic typeface** on specifying pages usually identifies wording that you should use in your order.

i

**Tip 7**

**To determine** how many skins are needed to complete a panel, consult the table at the right.

*Tip: Remember to order skins for both sides of the panel buildup.*

**Watch for tips** throughout the text that give you explanations and helpful instructions.

**Tip 8**

**Learn what you cannot do** by looking for drawings crossed out with an "X."

**Tip 9**

**Use the surface materials listings** in the Surface Materials section of this book to find surface material color numbers.

**Tip 10**

Style Number	Page
<b>TS7042BL</b>	131
<b>TS7042S</b>	130
<b>TS7048BL</b>	131
<b>TS7048S</b>	130
<b>TS7060BL</b>	131
<b>TS7060S</b>	130
<b>TS7072BL</b>	131

**Refer to the style number index** when you know a style number and you need to find the page that has more details about the product.

# Additional Resources

## Architectural Solutions

are supported with informational materials, tools, and software to help you plan, specify, and order an installation efficiently.

### Product brochures and planning tools

can be ordered through your Steelcase area office by calling 1.800.784.0358 or through the Marketing Resources web site at [village.steelcase.com](http://village.steelcase.com).

## Printed Materials

### Surface Materials Reference Manual

This publication provides:

- An explanation of the surface materials
- “Available on” matrices
- Vertical surface fabric and seating upholstery selection listing
- Technical data for surface materials
- Surface material care and cleaning instructions

## Computer Tools

### Electronic Catalog

Accurate sales quotations and purchase orders for Steelcase products are created with specification software that uses Steelcase Electronic Catalog data. Use the data to specify and price style numbers and options for every Steelcase product. The data is updated bimonthly by Steelcase and provided to software programs including: the Hedberg Business System, SmartTools—Steelcase’s design and specification software (for more information on SmartTools, please email [SmartTools@steelcase.com](mailto:SmartTools@steelcase.com)), the ProjectMatrix ProjectSymbols libraries, as well as 20-20 CAP Studio.

### Furniture Symbol Graphic Data

Steelcase creates 2D and 3D furniture symbols (with attributes) for planning and initially specifying Steelcase products. This data is incorporated into several add-on software packages that work in either a Microstation or an AutoCAD drafting environment.

For more information about these and other software tools to help you plan effective work environments, please email [fsl@steelcase.com](mailto:fsl@steelcase.com).

### Digital Publications

You can access these digital publications at [www.steelcase.com](http://www.steelcase.com) or [village.steelcase.com](http://village.steelcase.com).

## Architectural Solutions Product Training

Basic training for the products included in the Architectural Solutions product portfolio is available as part of the Building Product Muscle (BPM) curriculum on the Steelcase University Web site at [village.steelcase.com](http://village.steelcase.com).

The four BPM modules are Web-based, interactive courses filled with pictures, detailed positioning, statement of line, and feature benefit information, as well as practice exercises designed to build salespeople’s knowledge of the products. The BPMs also provide printable job aids of all content covered in the courses to serve as ongoing performance support. The available courses are:

- Privacy Wall—SAL271
- Architectural Solutions Low-Profile Floor—SAL243
- Architectural Solutions Modular Power—SAL245

Additionally, there are two courses available to help improve your understanding of how to position the advantages of an Architectural Solution with potential clients: Architectural Solutions—SAL242 and The AS Value Proposition—SAL258.

## Support

### Steelcase Capabilities

Steelcase products are distributed, installed, and serviced through a network of more than 600 dealers worldwide. Steelcase is also represented with offices and corporate showrooms in 26 U.S. cities, 4 Canadian cities, and in France, Germany, Great Britain, and Japan. Every Steelcase product meets our exceptionally high standards of quality and durability and comes with the Steelcase assurance of excellence in service.

**For assistance**, please call your local dealer, the Steelcase Solutions Resource Team, or the Steelcase Solutions Fulfillment Team at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to [lineone@steelcase.com](mailto:lineone@steelcase.com).

Call the Steelcase Solutions Resource Team prior to placing an order, when working on a bid, or when you need information about product applications and specifications.

Call the Steelcase Solutions Fulfillment Team if you have submitted an order to Steelcase and you need to speak to your Solutions Fulfillment Team Representative about the order. Also call if you have any post-shipment quality concerns or service parts questions.

For warranty information, please go to <http://www.steelcase.com/warranty/>.

Outside the U.S.A., Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands, call 1.616.247.2500.

For information about Steelcase, the name of your nearest Steelcase dealer, or for product literature, call 1.800.333.9939, or visit our Web site: [www.steelcase.com](http://www.steelcase.com).

# Solid Wall Panels

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Privacy Wall solid wall panels** create floor-to-ceiling walls, prefabricated to the height and width dimensions you specify. These panels, which offer power and communication capability, can be relocated to respond to changing needs.  
 ▶ Specifying, page 108

**Hollow core panel** enables wiring and cabling to be routed within the panel.

**Enhanced core panel** has an insulated core to afford greatest acoustical performance. Use with overlapping ceiling track to realize maximum results.

**Integral slotted verticals** allow for panel-supported furniture. Integral slotted verticals start above the base and run to a height of 84". Slotting will support components that are designed to hang on Answer and Kick, including Universal Storage and Worksurfaces.

**Adjustable levelers** allow panels to be installed on uneven floors.

**Floor track** anchors base of panel to carpeted floor, without fasteners.  
 Tip: For information about hard surface floors and Low-Profile Floor.  
 ▶ Page 282

## Product Details

**Panel height** can be specified from 8'0"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.  
 Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

**Ceiling track** allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment to accommodate variations at base.

**Panel widths** range from 6"W to 60"W.

**Width of panel** is measured to center of joint between two panels.

**Modular panels used with adapters** allow centerline planning. In the example above, two modular panels allow the distance between the centerline of the two parallel walls to remain at 12'0".

Standard panels

Modular panels

**Modular panel widths** are slightly smaller ( $15\frac{1}{16}$ " less) than regular panel widths so that when a corner condition is created, the overall dimension remains unchanged. All other features of modular panels are the same as standard panels.

**Continuous base trim**, ordered separately, is 5"H and available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

**Finished-end adapter** is available to finish the exposed end of a run of panels. Adapter adds approximately  $13\frac{1}{16}$ " to the length of the wall.

**Solid panels**, as tested per ASTM E90, achieve STC ratings as follows:

- STC 41 for hollow core panels with recessed ceiling track
- STC 42 for hollow core panels with overlapping ceiling track
- STC 45 for enhanced core panels with overlapping ceiling track

*Tip: Use of hang-on components or receptacles in panels may reduce acoustic effectiveness.*

Panel-end trim piece

**Panel end cut kit** connects a cut panel to another panel in line. It restores leveler and housing that is removed when panel is cut on site. Kit includes trim piece to finish the cut side of the panel and to enable feature strip connection to an adjacent panel.

*Tip: Hang-on components are not allowed on cut panels.*

▶ Page 180

**Different surface materials** can be applied to opposite sides of the panel. For example, you can have vinyl applied to side 1 and fabric applied to side 2.

**Vinyl** is available on panels that are 48"W or smaller.

**Ceiling track bypass cover** is available to conceal cable or conduit routed next to a recessed ceiling track as the conduit travels from the ceiling into a wall panel.

▶ Page 238

**Acoustic packing** is available to improve the acoustical performance at mini ends and wall channels. Each 120" length of acoustic packing provides enough material for three mini ends at 10' ceiling height.

▶ Page 248

### Connections

**Feature strips**, ordered separately, join panels together. Strip prevents light and sound leaks and can be cut to allow access to the integral slotted verticals. To rearrange panels, feature strips can be removed and reused.

▶ Page 244

**Furniture reveal strips**, ordered separately, are positioned between two sections of in-line feature strip to allow access to one set of panel slots when a single component is mounted on a Privacy Wall panel. When components are mounted side-by-side, both sets of slots are left exposed, and there is no need for a furniture reveal strip. Furniture reveal strips are painted to match the adjacent wall panel or to match the component bracket.

*Tip: Use of hang-on components with enhanced core panels may reduce acoustic effectiveness.*

▶ Page 247

Recessed

Overlapping

**Ceiling track**, ordered separately, joins the top of wall panels to the ceiling. Ceiling track is available recessed or overlapping.

*Tip: Use overlapping ceiling track with enhanced core panels to maximize acoustical performance.*

▶ Page 60

Solid Wall Panels, continued

**Base trim** fits into position at the bottom of panel surface above the floor track.

**Integral slotted verticals** accommodate any hang-on component that will hang on Answer or Kick panels, at any height in 1" increments up to 84".

- ▶ See page 86 for more information about hanging components.
- ▶ See *Storage and Freestanding Furniture Specification Guide*.

**Posts** join panels in in-line, L-, T-, X-, V-, and Y-configurations without blocking access to integral slotted verticals.

- ▶ Page 82

**Adapters** connect panels in L-, T-, and X-configurations without adding extra creep to panel dimension.

*Tip: Adapter blocks slotted verticals in panel edge of some panels.*

- ▶ Page 78

**Mini end** connects a panel or panel run to a perpendicular building wall. Elements of the mini end telescope allow a limited range of dimensional adjustability.

- ▶ Page 68

**Wall channel** connects an uncut panel to a perpendicular building wall.

- ▶ Page 72

**Solid panels** can be cut on site to conform to building walls and ceiling details including sills and bulkheads.

**Specify** an end filler cut kit when cutting a panel into a wall channel. The end filler cut kit includes a wall channel and a spreader.

**Cut edges of cut panel** can be finished with field-cut wall channel.

**End filler cut kit** combines a wall channel and spreader into one assembly. Kit is used when cutting a panel at a perpendicular building wall.

- ▶ Page 181

**I-Line interface post** allows a Privacy Wall panel to connect to an existing I-Line panel in line.

- ▶ Page 186

*Tip: Two I-Line feature strips are needed for the I-Line side of the connection. Two Privacy Wall feature strips are needed for the Privacy Wall side of the connection.*

- ▶ See *How to Connect Privacy Wall to I-Line Moveable Walls*, page 94.

**Post and Beam attachment kit** is available to connect Privacy Wall panels to Post and Beam at a feature strip. The Post and Beam kit cannot be used off-module. It is designed for use in overhead applications only. It should not be used in fence application.

- ▶ Page 249

**Universal floor grippers** are designed for use with Privacy Wall panels that are placed on top of Low-Profile Floor. The universal floor gripper fits underneath the panel floor channel and glides to evenly distribute weight on the floor. When used with double-sided adhesive tape, the universal floor gripper will also prevent movement on hard surface floors like tile, wood, or terrazzo.

*Tip: Universal floor grippers must be specified when installing in accordance with ICC Compliance Report.*

**Panels which are configured for low profile base trim** are not compatible with the universal floor gripper. Panels that are required to be secured to the floor must be directly anchored to the floor with conventional fasteners.

**Edge, Access, and Session, Premium Markerboard and Tackboard products**, can be surface mounted to Privacy Wall by clipping into panel slots. All mounting brackets and hardware are included with each board. In addition to bracket mounted boards, Senti markerboards can be magnetically mounted to painted panel surfaces. The maximum size markerboard for magnetic mounting is 48"x48". Application rules, magnetic mounting guidelines, and specification information can be found in the *Meeting Spaces Specification Guide*.

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com/Sales Guides](http://village.steelcase.com/Sales Guides) and more.

**Wiring & Cabling**

**Hollow core in panel** enables both vertical and horizontal cable routing within panel.

**Panels with enhanced core** do not allow for vertical cable routing. Cable can be routed laterally at the base.

**Solid hollow core Privacy Wall panels** can be specified with factory-installed powerkits. Powerkits include a power block and an installation cage. Field-installed powerkits are also available.

**Desk- and ADA-height power blocks** will be factory installed in center of panel to accommodate either power receptacles only or power and communication receptacles. A single power block can be specified to allow receptacles on one side or both sides of the panel.

Power receptacles

Power and communication receptacles

**Cover plates**, ordered separately, accommodate power receptacles and communication faceplates. Cover plates are used in panel face only.

▶ Page 253

**Base-height power block** will be factory installed in center of panel. A single power block can be specified to allow receptacles in one side or both sides of panel. Base-height power is available in both hollow core and enhanced core panels.

**Base trim**, ordered separately, is 59"W and available in three versions— power only, power and communication, and communication only.

**Width of panel** must be adequate to accommodate cutouts. See table below for minimum widths.

**Power and Communication**

- 30"W–60"W Standard panel
- 30"W–60"W Modular panel

**Power receptacles** are ordered separately and installed on site. They are coded to indicate which circuit and type of ground they engage.

▶ Page 251

**USB receptacles** are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

**Communication receptacles** are provided by others and installed on site. They can accommodate single-gang NEMA-style faceplate, snap-in modular furniture-style faceplate, or Decora mounting strap style.

Base height Desk height ADA height

Desk Base ADA Base Desk ADA Base

**Receptacles in hollow core panels** can be specified in any combination of base height, desk height, or ADA height, or on Clerestory panels.

**Utilities** can be specified on either side of the panel or on both sides. Receptacles can be installed on either side of the panel or on both sides. Fillers can be installed in any unused cutouts.

**Infeeds** can connect power blocks to building power in the ceiling or floor. Factory-installed infeeds extend a minimum of 12' from the panel.

**Modular harnesses and harness-to-harness connectors** can be used to extend power to a power block from another power block in an adjacent panel.

Solid Wall Panels, continued

**Wiring schematics** are available to accommodate a wide range of building types and power needs. 15-amp and 20-amp systems are available in 4-circuit, 3+1; 4-circuit, 2+2; and 3-circuit with separate neutrals. All of these choices are supported with a system ground and isolated ground.

**Local electrical codes vary.** Consult a qualified electrical contractor or engineer for the proper installation of electrical components.

**Chicago and New York City** require that all power be hardwired in the field. Modular power systems are not permitted. All Privacy Wall panels can be hardwired on site using conventional electrical components.

**New York City/Chicago power prep option** can be selected to provide panel cutouts and internal hardware to receive hardwired components.

**New York City/Chicago power prep option** requires use of Privacy Wall cover plate, ordered separately.

# Solid Wall Panels — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Panel height** can be specified from 7'5"H to 11'0"H, in one-inch increments, to accommodate different ceiling heights.  
*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*  
*Tip: Panels that are greater than 10'0"H cannot exceed 48" in width.*

**Solid panel widths** range from 6"W to 60"W in even 1" increments.  
*Tip: Panels with enhanced core do not exceed 48" in width.*

**Modular solid panel widths** range from 6 11/16"W to 58 11/16"W in 1" increments.  
*Tip: Panels with enhanced core do not exceed 46 11/16" in width.*

**4" high continuous base trim**, ordered separately, can also be specified and is available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other. When using 4"H base, panels and other vertical components must be specified with a modified height to accept 4"H base trim and to ensure that the correct overall ceiling height is achieved.  
*Tip: Other modified components that must be specified to accept 4"H base:*  
 Panels  
 Posts and adapters  
 Feature strips  
 Door frames  
 Slider doors  
 Mini ends  
 Wall channels and cut kits  
*Tip: 4" high base cannot be used with base-located power.*

**Panel surfaces** can be specified with a markerboard surface for use with dry erase markers.  
*Tip: When using adjacent markerboard panels, specify the shared feature strip in a black painted or anodized finish. Black painted strips will conceal marks on surface. Anodized surface will allow markers to be cleaned from surface.*  
*Tip: Markerboard surface is available in a maximum ceiling height of 120" and a maximum width of 48".*

**Wood veneer surfaces** are available on 5" high base trim, including straight, corners, and cutouts.

# Glass Wall Panels

Including Glass Selections Wall Panels

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Privacy Wall glass wall panels and Glass Selections wall panels** create floor-to-ceiling walls, prefabricated to the height and width dimensions you specify. These panels, which offer power and communication capability, can be relocated to respond to changing needs.  
 ▶ Specifying, pages 114–134, 188–202, 228–232

**Feature strip** joins panels.

**Factory-installed lites** can be specified in a variety of glass types.  
*Tip: For information regarding Etched and Pattern Glass Planning.*  
 ▶ Page 96.

**Muntins** divide glass into separate lites.

**Adjustable levelers** allow panels to be installed on uneven floors.

**Recessed or overlapping ceiling track** is available.

**Post extensions** are available in two versions to accommodate both types of ceiling tracks.

**Integral slotted verticals** above the base run to a height of 84".  
*Tip: Integral slotted verticals are available only on Clerestory and solid panels.*

**Surface of Clerestory panels** is steel, available in paint, fabric, or vertical surface vinyl.  
*Tip: Vertical surface vinyl is available only on panels 48"W or smaller.*  
*Tip: Vertical surface vinyl is not Greenguard and Indoor Advantage certified.*

**Power and communication outlets** can be located in the panel face at desk and/or ADA height and/or in the base of a Clerestory panel. Outlets can be located in the base of full-glass panel or divided lite panel. Receptacles and cover plates are ordered separately.

**Continuous base trim,** ordered separately, is added in the field.

**Product Details**

Glass wall panel Three equal divided lites

Four equal divided lites Two divided lites, transom-aligned top lite

Four divided lites, transom-aligned top lite Clerestory

**Glass wall panels** are available in the following types: one lite, three equal divided lites, four equal divided lites, two divided lites with transom-aligned top lite, four divided lites with transom-aligned top lite, and solid with glass Clerestory.

**Some pattern glass types** have a linear pattern. These linear patterns are oriented vertically as shown. See page 96 to identify vertical pattern glass.

**Glass Selections frame and glass kits** are assembled in the field. Butt joints must be sealed glazed with glazing tape or silicone sealant to be code-compliant. Tip: COM glass for frame and glass kits must be 3/8" thick for structural integrity. Tip: Standard glass thickness must be between 0.312" and 0.417" thick.

**Ceiling track** allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment to accommodate variations at base.

**Glass wall panels with transom-aligned top lite** correspond to transom-height doors. Tip: Top muntin is 2 1/4"H; other muntins are 1 1/2"H. Glass Selections muntins are 2 1/2"H.

**Muntins** are factory installed horizontal framing elements that physically divide glass lites. Muntins match frame color specified. Glass Selections is available in clear anodized aluminum only.

Tip: All muntins in glass wall panels with four equal divided lites are 1 1/2"H. Glass Selections muntins are 2 1/2"H.

**Panel height** can be specified from 8'0"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights. Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

**Panel widths** range from 6"W to 60"W. Exception: Clerestory and Glass Selections Clerestory wall panels range from 18"W to 60".

**Width of panel** is measured to center of joint between two panels.

**Modular panels used with adapters** allow centerline planning. In the example above, two modular panels allow the distance between the centerline of the two parallel walls to remain at 12'0".

**Modular panel widths** are slightly smaller (15/16" less) than regular panel widths so that when a corner condition is created, the overall dimension remains unchanged.

**Continuous base trim**, ordered separately, is 5"H and available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

Glass Wall Panels, including Glass Selections Wall Panels, continued

**Finished-end adapter** is available to finish the exposed end of a run of panels. Adapter adds approximately 13/16" to the length of the wall.

**Vinyl** is available on Clerestory panels that are 48"W or smaller.

**Glass Selections L-corner units**, ordered separately, join Glass Selections panels in L-configuration. Butt joints are field-glazed (glazing tape or silicone sealant) on site during installation. ▶ Page 224

Full-size panel for interior dimension planning      Modular-size panel for centerline planning

**Glass Selections L-corner units** plan dimensionally in the same manner as individual panels that are joined by a post.

Full-size panel for interior dimension planning

Modular-size panel for centerline planning

**Glass Selections T-corner frame kits** join Glass Selection panels in a T-configuration. Frame kits are assembled in the field. Glass kits include three pieces of glass. Butt joints must be glazed with glazing tape or silicone sealant to be code-compliant.

**Due to the process steps** involved in installation of glass, T-corner frame kits can be placed no closer than 20" to a single mini end or wall channel.

**Connections**

**Feature strips**, ordered separately, join panels together. Strip prevents light and sound leaks and can be cut to allow access to the integral slotted verticals in the Clerestory panels. To rearrange panels, feature strips can be removed and reused. ▶ Page 245

**For Clerestory panels**, you can specify two different feature strips when the solid-panel finish is different from the upper-glass frame finish.

**Half feature strips** are used in combination with inline feature strips for inside corner applications.

**Furniture reveal strips**, ordered separately, are positioned between two sections of in-line feature strip to allow access to one set of panel slots when a single component is mounted on a Privacy Wall panel. When components are mounted side-by-side, both sets of slots are left exposed, and there is no need for a furniture reveal strip. Furniture reveal strips are painted to match the adjacent wall panel or to match the component bracket. ▶ Page 247

**Ceiling track**, ordered separately, joins the top of wall panels to the ceiling. Ceiling track is available recessed or overlapping. ▶ Page 60

**Base trim** fits into position at the bottom of panel surface above the floor track.

**Panel-supported storage and work surface components** cannot be attached to glass wall panels. Use solid wall or Clerestory panels instead. ▶ See page 86 for more information about hanging components.

**Posts** join panels in in-line, L-, T-, X-, V-, and Y-configurations without blocking access to integral slotted verticals.

▶ Page 82

**Adapters** connect panels in L-, T-, and X-configurations without adding extra creep to panel dimension.

▶ Page 78

**Mini end** connects a panel or panel run to a perpendicular building wall.

▶ Page 68.

**I-Line interface post** allows a Privacy Wall panel to connect to an existing I-Line panel in line.

▶ Page 186

Tip: Two I-Line feature strips are needed for the I-Line side of the connection. Two Privacy Wall feature strips are needed for the Privacy Wall side of the connection.

▶ See *How to Connect Privacy Wall to I-Line Moveable Walls*, page 94.

**Post and Beam attachment kit** is available to connect Privacy Wall panels to Post and Beam at a feature strip. The Post and Beam kit cannot be used off-module. It is designed for use in overhead applications only. It should not be used in fence application.

▶ Page 249

**Universal floor grippers** are designed for use with Privacy Wall panels that are placed on top of Low-Profile Floor. The universal floor gripper fits underneath the panel floor channel and glides to evenly distribute weight on the floor. When used with double-sided adhesive tape, the universal floor gripper will also prevent movement on hard surface floors like tile, wood, or terrazzo.

**Panels which are configured for low profile base trim** are not compatible with the universal floor gripper. Panels that are required to be secured to the floor must be directly anchored to the floor with conventional fasteners.

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com](http://village.steelcase.com)/Sales Guides and more.

**Wiring & Cabling**

**Hollow core in Clerestory panel** enables both vertical and horizontal cable routing within panel.

**Glass Privacy Wall panels** can be specified with factory-installed powerkits. Power kits include a power block. Field-installed powerkits are also available.

**Desk- and ADA-height power blocks or Clerestory panel** will be factory installed in center of panel to accommodate either power receptacles only or power and communication receptacles. A single power block can be specified to allow receptacles on one side or both sides of the panel. Both sides must be specified with the same configuration (power receptacles only or power and communications receptacles). Both sides must be specified with the same configuration (power receptacles only or power and communication receptacles).

**Power** is located in the center of a panel except in Glass Selections frame kits, where the center of the power is located 12" from the panel edge.

Power receptacles

Power and communication receptacles

**Cover plates**, ordered separately, accommodate power receptacles and communication faceplates. Cover plates are used in panel face only.

▶ Page 253

**Base-height power block** will be factory installed in center of panel. A single power block can accommodate receptacles in one side or both sides of panel.

Glass Wall Panels, including Glass Selections Wall Panels, continued

**Base trim**, ordered separately, is 59"W and available in three versions— power only, power and communication, and communication only.

**Width of panel** must be adequate to accommodate cutouts. See table below for minimum widths.

**Power and Communication**

- 30"W standard panel
- 30"W (nominal) modular panel

**Power receptacles** are ordered separately and installed on site. They are coded to indicate which circuit and type of ground they engage. ▶ Page 251

**USB receptacles** are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampereage of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

**Communication receptacles** are provided by others and installed on site. They can accommodate single-gang NEMA-style faceplate, snap-in modular furniture-style faceplate, or Decora mounting strap style.

**Receptacles** can be specified in any combination of base height, desk height, or ADA height, on Clerestory panels.

**Utilities** can be specified on either side of the panel or on both sides. Receptacles can be installed on either side of the panel or on both sides. Fillers can be installed in any unused cutouts.

**Infeeds** can connect power blocks to building power in the ceiling or floor. Because glass panels cannot accommodate vertical routing of harnesses through the glass portion of the panel, use adjacent solid panels, mini ends, or door frames to bring power from the ceiling to a power block in a glass panel. Clerestory can route in panel from bottom.

**Modular harnesses and harness-to-harness connectors** can be used to extend power to a power block from another power block in an adjacent panel.

**Wiring schematics** are available to accommodate a wide range of building types and power needs. 15-amp and 20-amp systems are available in 4-circuit, 3+1; 4-circuit, 2+2; and 3-circuit with separate neutrals. All of these choices are supported with a system ground and isolated ground.

**Local electrical codes vary.** Consult a qualified electrical contractor or engineer for the proper installation of electrical components.

**Chicago and New York City** require that all power be hardwired in the field. Modular power systems are not permitted. All Privacy Wall panels can be hardwired. on site using conventional electrical components.

**New York City/Chicago power prep option** can be selected to provide panel cutouts and internal hardware to receive hardwired components.

**New York City/Chicago power prep option** requires use of Privacy Wall cover plate, ordered separately. ▶ Page 253

# Glass Wall Panels — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Panel height** can be specified from 7'5"H to 11'0"H, in one-inch increments, to accommodate different ceiling heights.  
*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*  
*Tip: Panels that are greater than 10'0"H cannot exceed 48" in width.*  
*Exception: Clerestory panels can be specified with a minimum ceiling height of 7'11".*

**Glass panel widths** range from 6"W to 60"W in even 1" increments.  
*Exception: Clerestory wall panels have a minimum width of 18"W, and maximum width of 60"W.*

**Modular glass panel widths** range from 6<sup>11</sup>/<sub>16</sub>"W to 58<sup>11</sup>/<sub>16</sub>"W in 1" increments.  
*Exception: Clerestory wall panels have a minimum width of 16<sup>11</sup>/<sub>16</sub>"W, and maximum of 58<sup>11</sup>/<sub>16</sub>"W.*

**4" high continuous base trim**, ordered separately, can also be specified and is available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other. When using 4" high base, panels and other vertical components must be specified with modified height to accept 4" base trim and to ensure that the correct overall ceiling height is achieved.  
*Tip: Other special components that must be specified to accept 4"H base:*  
 Panels  
 Posts and adapters  
 Feature strips  
 Door frames  
 Slider doors  
 Mini ends  
 Wall channels and cut kits  
*Tip: 4" high base cannot be used with base-located power.*

**Clerestory panel surfaces** can be specified with a markerboard surface for use with dry erase markers.  
*Tip: When using adjacent markerboard panels, specify the shared feature strip in a black painted or anodized finish. Black painted strips will conceal marks on surface. Anodized surface will allow markers to be cleaned from surface.*  
*Tip: Markerboard surface is available in a minimum of 18"W and a maximum of 48"W.*

**Glass wall panels** can be specified with wood veneer surfaces. This includes the glass frame on Clerestory panels as well as muntins.

**For Clerestory panels**, you can specify two different feature strips when the solid panel finish is markerboard.

**Any or all of the standard muntin positions** can be moved. Muntins and glass horizontals can be no closer than 6<sup>7</sup>/<sub>8</sub>".

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Muntin size** can be specified as 1 1/2" or 2 1/4".

**Additional muntins** can be added to a four divided lite panel to make up to six lites. Muntins and glass horizontals can be no closer than 6 7/8".

**A single muntin** can be added to a Clerestory panel to create two lites. Muntins and glass horizontals can be no closer than 6 7/8".

**Wood veneer surfaces** are available on 5" high base trim, including straight, corners, and cutouts.

**Surface Materials**

- The following components can be specified with wood veneer surfaces:
- Glass frames
  - Base trim
  - Ceiling track
  - Feature strips

# Glass Selections — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**The height for wall panels, frame kits, glass kits, L- and T-corners** can be specified from 7'5"H to 10'H in one-inch increments to accommodate different ceiling heights.  
*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*  
*Exception: Clerestory panels can be specified with a minimum ceiling height of 7'11".*

**Panel widths** range from 6"W to 60"W in even 1" increments.  
*Exception: Clerestory wall panels have a minimum width of 18"W and maximum of 60"W.*

**Modular glass panel widths** range from 6 11/16"W to 58 11/16"W in 1" increments.  
*Exception: Clerestory wall panels have a minimum width of 16 11/16"W, and maximum of 58 11/16"W.*

**Frame kits and glass kits** can range in widths from 61"W to 144"W in even 1" increments.

**For modular frame kits and glass kits, sizes** can range from 59 11/16" to 142 11/16".

**Glass Selections wall panels and frame kits** can be specified with painted surfaces as an alternative to anodized aluminum.  
*Tip: For painted posts, mini ends, and feature strips, use Privacy Wall components.*

**Glass Selections Clerestory panel surfaces** can be specified with a markerboard surface for use with dry erase markers.  
*Tip: When using adjacent markerboard panels, specify the shared feature strip in a black painted or anodized finish. Black painted strips will conceal marks on surface. Anodized surface will allow markers to be cleaned from surface.*  
*Tip: Markerboard surface is available in a minimum width of 18"W and a maximum of 48"W.*

**4" high continuous base trim**, ordered separately, can also be specified and is available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other. When using 4" high base, panels and other vertical components must be specified with modified height to accept 4" base trim and to ensure that the correct overall ceiling height is achieved.  
*Tip: Other components that must be specified with 4" base:*  
 Panels  
 Frame kits and glass kits  
 Posts and adapters  
 Feature strips  
 Door frames  
 Slider doors  
 Mini ends  
 Wall channels and cut kits  
*Tip: 4" high base cannot be used with base-located power.*

**Low profile base trim,**

ordered separately, can be specified on Glass Selections panels (including Clerestory) and frame kits. The base height is 2 1/2"H and is available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other. When using low profile base, specify panels with base trim height to match. Components must be specified with a modified height to ensure that correct overall ceiling height is achieved. Other components must also be specified with a modified height to ensure that correct overall ceiling height is achieved.

*Tip: Other special components that must be specified with low profile base:*

- Panels*
- Frame kits and glass kits*
- L- and T-corner units*
- Feature strips*
- Posts*
- Door frames*
- Slider doors*
- Mini ends*

**Panels with low profile base** have reduced vertical adjustment at the floor (plus/minus 3/8").

**Base trim for low profile base** is provided with a clear anodized finish.

**Panels which are configured for low profile base trim** are not compatible with the universal floor gripper. Panels that are required to be secured to the floor must be directly anchored to the floor with conventional fasteners.

**Product Details**

Single and pair versions of doors and door frames are available.

**Glass doors** can be ordered with a bottom rail height dimension of 5"H or 12"H. The 5" rail height will align closely with the bottom horizontal of a glass panel. In some areas of the country (such as California), a 12"H minimum bottom rail is required for code compliance in some applications.

**Door frames** can be specified from 8'0"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights. *Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Ceiling track** allows 1/2" of vertical adjustment to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment.

**Plinths** are included to finish the bottom of both sides of a door frame.

**Full-height doors** increase in height as the door frame increases. *Tip: Maximum ceiling height of glass doors is 9'0"H.*

**Transom-height door leaves** are 7'0"H. Transom increases in height as the door frame increases.

**Width of single door frame** is 40"W and accommodates a 35<sup>13</sup>/<sub>16</sub>"W door.

**Width of pair frame** is 76"W and accommodates two 35<sup>13</sup>/<sub>16</sub>"W door leaves.

**Transom-height doors** correspond to Clerestory or glass wall panels with transom-aligned top lite.

*Tip: For information regarding Etched and Pattern Glass Planning.* ▶ Page 96.

**Transom-height frames for pair of doors with vertical directional, patterned glass** will have a vertical muntin installed in the center of the transom. ▶ See *Glass Availability Matrix* for directional glass options, page 360.

**Left- and right-hand versions of butt-hinged doors and door frames** are available. Swing orientation cannot be altered.

**To determine whether a door is left or right hand**, imagine yourself standing in the door's frame with your back against the side of the frame where the door's hinges will be attached. If the door will swing to your left, it is a left-hand door (and frame). If it will swing to your right, it is a right-hand door (and frame).

**Ceiling track bypass cover** is available to conceal switch conduit routed next to a recessed ceiling track as the conduit travels from the ceiling into a door frame. ▶ Page 238

Butt-Hinged Frames and Door Leaves, continued

**Cylindrical passage set or lockset**  
**Mortise passage set or lockset**

**Cutout for cylindrical passage set or lockset** is standard in butt-hinged door leaves. Cutout for mortise passage set or lockset is available as an option. Order passage sets and locksets separately.

▶ Page 160  
*Tip: Cutout and hardware must be the same for door and door frames.*  
*Tip: Locksets and passage sets ordered from another manufacturer must have a 1 3/8" curved strike plate.*  
*Tip: Doors that are specified with hardware prep for mortise locks will not have faces drilled for levers, cylinders, etc. All necessary holes in the face of the door must be drilled by the installer.*

**Magnetic wall stop**  
**Dome-style floor stop**  
**Screw-in base stop**

**Door stops** can be ordered for use with doors. Magnetic wall stop, dome-style floor stop, and screw-in base stop are available. Magnetic wall stop is for use with painted solid or Clerestory panels only.

▶ Page 162  
**All door openings** meet ADA requirements.

**Connections**

**Feature strips**, ordered separately, join door frames to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

▶ Page 244

**Ceiling track**, ordered separately, joins the top of door frames to the ceiling. Ceiling track is available recessed or overlapping.

▶ Page 60

**Panel-supported storage and worksurface components** cannot be attached to door frames. Use solid wall or Clerestory panels instead.

**Posts** join a door frame to a panel in an L-, T-, X-, V-, or Y-configuration. A T-, X-, or in-line post can also be used between two in-line door frames.

▶ Page 82

**Adapters** connect a door frame to a panel in an L-, T-, or X-configuration. A T-adapter can also be used between two in-line door frames.

▶ Page 78

**Mini end** connects a door frame to a perpendicular building wall.

▶ Page 68

**When positioned next to a door frame**, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

**Do not use a wall channel** to connect a door frame to a perpendicular wall.

▶ See *Wall Channel Flexibility*, page 75.

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com/Sales Guides and more](http://village.steelcase.com/Sales Guides and more).

**Wiring & Cabling**

**Installation of a switch in a door frame** will limit the ability to route a power infeed through the frame. If the door frame has no switch, you can route power to the base of an adjacent glass panel.

**Switch cutout**, available as an option on single door frames, will be factory-cut in the strike jamb of the frame, on the side that matches the direction in which the door swings. Switch cutout is located 42" from floor.

**Wiring** is routed from the ceiling or floor through the door jamb.

**Low-voltage switches** are available on all door frame types except pairs of doors.

**Low-voltage switches** can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

**Low-voltage switch kits** include:

- Switch device
- Cover trim
- Transformer
- Low-voltage (18-gauge) wire x 30'

**High-voltage switches** are rated for 120V and 277V applications, and are available on all door frame types except Privacy Wall slider doors, Glass Selections slider doors, and pairs of doors. You must specify door frame for use with switch cutout.

**High-voltage switch kits** include:

- Electrical box and strap
- Switch device
- Cover plate

Wiring and conduit are not included.

**Surface Materials**

**Door frame**

- Paint

**Aluminum rails and stiles on glass door leaf**

- Paint

**Solid door leaf**

- Paint
- Wood veneer

**Transom, glass door leaf**

# Butt-Hinged Frames and Door Leaves — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Door frames** can be specified with wood veneer surfaces.

8'0"H to 11'0"H

**Door frames with transom** can be specified from 8'H to 11'H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**A single muntin** can be added to a transom height door frame to create two lites. Muntins and glass horizontals can be no closer than 6<sup>7</sup>/<sub>8</sub>".

**When planning with 4" high base**, specify door frames to accept 4"H base and to receive special height plinths to match base trim.

**Muntin size** can be specified as 1<sup>1</sup>/<sub>2</sub>" or 2<sup>1</sup>/<sub>4</sub>".

# Pivot-Hinged Frames and Door Leaves

## Including Glass Selections Pivot-Hinged Frames and Door Leaves

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Privacy Wall doors** can be used with Privacy Wall panels. Door frames and leaves must be ordered separately.  
 ▶ Specifying, pages 142–146, 152–159, and 206–215  
*Tip: Glass Selections panels are compatible with pivot-hinged frames and leaves only.*

**Recessed or overlapping ceiling track** is available.

**Pair leaves** can be painted or specified with wood veneer.

**Frame** has a narrow (1¼"W) profile. Expanded frame to accommodate switch has a 2½"W profile.

**Inactive door leaf**

**Door frame** is factory prepped for pivot hinges. Door hardware is ordered separately.  
 ▶ Page 160  
*Tip: Hardware is mostly hidden.*

**Post extensions** are available in two versions to accommodate both types of ceiling track.

**Feature strip** joins door frames to panels, posts, or adapters.

**Active door leaf** accommodates latch.

**Glass Selections door frames** are available in anodized aluminum to match Glass Selections panels.  
*Tip: Glass Selections transom profile is slightly smaller than Privacy Wall. Therefore, only Glass Selections door leaves must be used with Glass Selections door frames.*

**Single door leaves** are solid or glass. Solid leaves can be painted or specified with wood veneer.

**Product Details**

**Single and pair versions of doors and door frames** are available.

**Glass doors** can be ordered with a bottom rail height dimension of 5"H or 12"H. The 5" rail height will align closely with the bottom horizontal of a glass panel. In some areas of the country (such as California), a 12"H minimum bottom rail is required for code compliance in some applications.

**Door frames** can be specified from 8'0"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.  
*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Ceiling track** allows 1/2" of vertical adjustment to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment.

**Plinths** are included to finish the bottom of both sides of a door frame.

**Full-height doors** increase in height as the door frame increases.  
*Tip: Maximum ceiling height of glass doors is 9'0"H.*

**Transom-height door leaves** are 7'0"H. Transom increases in height as the door frame increases.  
*Tip: For information regarding Etched and Pattern Glass Planning.*  
▶ Page 96.

**Width of single door frame without switch cutout** is 40"W and accommodates a 37 3/16"W door.

**Width of pair frame** is 80"W.

**Width of single door frame with switch cutout** is 42"W and accommodates a 36 3/8"W door.

**Maximum swing of door** is 115°.

**Transom-height frames for pair of doors with vertical directional, patterned glass** will have a vertical muntin installed in the center of the transom.  
▶ See *Glass Availability Matrix* for directional glass options, page 360.

**Transom-height doors** correspond to Clerestory or glass wall panels with transom-aligned top lite.  
*Tip: For information regarding Etched and Pattern Glass Planning.*  
▶ Page 96.

Left-hand pivot door

Right-hand pivot door

**Solid pivot-hinged doors and door frames** are non-handed. By removing and reinstalling the strike plate, you can convert a left-hand pivot door into a right-hand pivot door.  
*Tip: Glass pivot doors are handed to ensure that glass is properly oriented.*  
▶ Page 96

Pivot-Hinged Frames and Door Leaves, including Glass Selections Pivot-Hinged Frames and Door Leaves, continued

**Pivot-hinged door frames with switch cutout** are handed. The switch cutout is on the side of the frame opposite the pivots. You cannot change the swing orientation of the door frame in the field, although you can change the swing of the door.

**To determine whether a door is left or right hand,** imagine yourself standing in the door's frame with your back against the side of the frame where the door's hinges will be attached. If the door will swing to your left, it is a left-hand door (and frame). If it will swing to your right, it is a right-hand door (and frame).

**Ceiling track bypass cover** is available to conceal switch conduit routed next to a recessed ceiling track as the conduit travels from the ceiling into a door frame. ▶ Page 238

**Cutout for cylindrical passage set or lockset** is standard in pivot-hinged door leaves. Cutout and strike plate for mortise passage set or lockset is available as an option. Order passage sets and locksets separately. ▶ Page 160

*Tip: Cutout and hardware must be the same for door and door frames.*  
*Tip: Mortise locksets and passage sets ordered from another manufacturer must have a 1 1/8" flat strike plate.*  
*Tip: Doors that are specified with hardware prep for mortise locks will not have faces drilled for levers, cylinders, etc. All necessary holes in the face of the door must be drilled by the installer.*

**Door stops** can be ordered for use with doors. Magnetic wall stop, dome-style floor stop, and screw-in base stop are available. Magnetic wall stop is for use with painted solid or Clerestory panels only. ▶ Page 162

**All door openings** meet ADA requirements.

**Connections**

**Feature strips,** ordered separately, join door frames to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused. ▶ Page 244

**Ceiling track,** ordered separately, joins the top of door frames to the ceiling. Ceiling track is available recessed or overlapping. ▶ Page 60

**Panel-supported storage and worksurface components** cannot be attached to door frames. Use solid wall or Clerestory panels instead.

**Posts** join a door frame to a panel in an L-, T-, X-, V-, or Y-configuration. A T-, X-, or in-line post can also be used between two in-line door frames. ▶ Page 82

**Adapters** connect a door frame to a panel in an L-, T- or X-configuration. A T-adapter can also be used between two in-line door frames. ▶ Page 78

**Mini end** connects a door frame to a perpendicular building wall. ▶ Page 68

**When positioned next to a door frame,** the mini end should be specified "to floor," and will be field-cut by the installer to final length.

**Do not use a wall channel** to connect a door frame to a perpendicular wall.

▶ See *Wall Channel Flexibility*, page 75.

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com/SalesGuides](http://village.steelcase.com/SalesGuides) and more.

**Wiring & Cabling**

Pivot door with switch

Pivot door without switch

**Installation of a switch** in a door frame will limit the ability to route a power infeed through the frame. If the door frame has no switch, you can route power to the base of an adjacent glass panel.

**In door frame with glass transom,** switch wiring must run down through the floor. Wiring cannot be run up to the ceiling.

**Switch cutout in pivot-hinged door frames** is always on the strike jamb of the frame. Cutout is standard on the side that matches the direction in which the door swings. Switch cutout is located 42" from floor.

**Low-voltage switches** are available on all door frame types except pairs of doors.

**Low-voltage switches** can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

**Pivot-hinged door frames** can remain non-handed by installing low-voltage switches in the feature strip rather than positioning them in the door frame.

**High-voltage switches** are available on all door frame types except Privacy Wall slider doors, Glass Selections slider doors, and pairs of doors. You must specify door frame for use with switch cutout.

**Surface Materials**

**Door frame**  
• Paint

**Glass Selections door frame**  
• Clear anodized aluminum

**Aluminum rails and stiles on glass door leaf**

• Paint  
• Clear anodized aluminum (Glass Selections only)

**Solid door leaf**

# Pivot-Hinged Frames and Door Leaves — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

### Privacy Wall door frames with transom

can be specified from 8' 0"H to 11' 0"H, in one-inch increments, to accommodate different ceiling heights.

*Exception: Glass Selections door frames are available in a maximum of 10'0".*

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**When planning with 4" high base, or low profile base**, specify door frames to accept 4"H or 2 1/2"H base and receive special height plinths to match base trim.

**Privacy Wall door frames** can be specified with wood veneer surfaces. Glass Selections frames are not available with veneer.

**A single muntin** can be added to a Privacy Wall transom height door frame to create two lites. Muntins and glass horizontals can be no closer than 6 7/8".

**Muntin size** can be specified as 1 1/2" or 2 1/4".

**Glass Selections door frames** can be specified with painted surfaces as an alternative to anodized aluminum.

# Door Swing Orientation Choices

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

## Butt-Hinged Door Frames

## Butt-Hinged Door Frames with Switch Cutout

Left-hand swing orientation

*Tip: Glass pivot doors are handed to ensure that glass is properly oriented.*

▶ Page 96

*Tip: Transom-height door frames are also available.*

# Privacy Wall Slider Doors

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Privacy Wall slider doors** include door frame, slider door, fixed panel, and hardware.

► Specifying, page 166

**Post extensions** are available in two versions to accommodate both types of ceiling track.

**Feature strip** joins slider door to panels, posts, or adapters.

**Recessed or overlapping ceiling track** is available.

**Fascia** conceals track and ceiling mechanism and projects beyond the face of the wall.

**Knockout for low-voltage switch** is located on fixed panel 42" from floor.

**Fixed panel** does not move. It provides space for the overlapping door when it is in the open position.

**Strike post** marks the extreme limit of door's travel.

**Door pull** is brushed stainless.

**Slider door** slides in front of fixed panel.

**Continuous base trim** is 5"H and ordered separately.

**Floor track** connects base of fixed panel to floor, without fasteners.

## Product Details

**Slider doors** can be specified from 8'0"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

Slider door units are available with five different glass configurations.

**Ceiling track** allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment to accommodate variations at base.

**Width of slider door** is 80"W or 96"W. Full opening is slightly less than half of the total width of sliding door assembly.

Left-hand Slider door

Right-hand Slider door

**Slider door** is available left hand and right hand when viewed from slider door side.

**Glass lite types** can be specified individually per row. ▶ See *Surface Materials*, page 354. *Tip: For information regarding Etched and Pattern Glass Planning.* ▶ Page 96.

**Some pattern glass types** have a linear pattern. These linear patterns are oriented vertically as shown. ▶ See page 96 to identify vertical pattern glass.

Frame  
Muntin

**Muntins** are factory-installed horizontal framing elements that physically divide glass lites. Muntins match frame color specified. *Tip: All muntins in slider doors with four equal divided lites are 1 1/2"H.*

**Low voltage switch cutout** is located in the side face of the finished opening frame.

*Tip: If slider door is oriented to the outside of the room, the switch cutout will be positioned on the inside of the room. If slider door is oriented to the inside of the room, the switch cutout will be positioned on the outside of the room.*

**Low-voltage switches** can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

**Door lock with interior thumb latch** is available as an option. Locks are keyed randomly.

**If using an alternate pull**, sliders can be specified to be provided without a pull and without mounting holes in the door. Care should be taken to use an offset pull, and to avoid interference with the lock mechanism.

**Plinths** are included to finish the bottom of both sides of a door frame.

**Continuous base trim**, ordered separately, is 5"H and available in 10' lengths. It runs along multiple panels and slider doors to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

Privacy Wall Slider Doors, continued

**Back-to-back slider cover** is available to trim the gap produced when two slider doors are installed side by side.

▶ Page 176

*Tip: Back-to-back slider cover is used in a strike-to-strike centerline planning application only.*

Recessed

Overlapping

**Ceiling track**, ordered separately, joins the top of doors to the ceiling. Ceiling track is available recessed or overlapping.

▶ Page 60

**Panel-supported storage and worksurface components** cannot be attached to slider doors. Use solid wall or Clerestory panels instead.

**Posts** join a slider door to a panel in an L-, T-, X-, or in-line configuration. A T-, X-, or in-line post can also be used between two slider doors.

▶ Page 82

**Connections**

**Feature strips**, ordered separately, join slider doors to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

▶ Page 244

**Adapters** connect a slider door to a panel in an L-, T-, or X-configuration. A T-adapter can also be used with two slider door strikes back to back.

▶ Page 78

**Back-to-back slider doors** will work at all adapters and posts when slider doors are on the outside of an office.

Plan view of T-post

Plan view of L-post

**Slider doors** will not work with an L- or T-adapter when slider doors are on the inside of an office. Use a post when positioning slide doors to the inside of an office.

*Tip: Slider door handing is oriented to the door side of the unit. Be sure to consider door position when determining handing.*

**Mini end** connects a slider door unit to a perpendicular building wall.  
 ▶ Page 68

**When positioned next to a door frame**, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com/Sales Guides](http://village.steelcase.com/Sales Guides) and more.

**Slider doors** are compliant with ADA guidelines for door openings, door hardware, and pull force.

Clear opening width when door is open is as follows:

Dimensions	
A	B
80"	34 <sup>1</sup> / <sub>4</sub> "
96"	42 <sup>1</sup> / <sub>4</sub> "

**Wiring & Cabling**

**Slider door** does not accommodate vertical wire and cable routing.

**Knockout** is available on Privacy Wall slider doors for low-voltage switches.

**Surface Materials**

**Door frame and muntins**

- Paint

**Lite**

- Glass

**Floor track**

- Paint

**Base trim**

- Paint

▶ Page 86

# Privacy Wall Slider Doors — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Slider doors** can be specified from 7' 5"H to 10' 0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Variable widths – side panel only:** variable slider door assembly widths can be achieved by varying the width of the side panel while the door and frame remain unchanged.

80"W: 80" min – 103" max  
96"W: 96" min – 111" max

**Variable widths – door and side panel:** variable slider door assembly widths can be achieved by varying the size of both the side panel and the door, keeping both symmetrical in width.

80"W: 76" min – 95" max  
96"W: 96" min – 113" max

**4" high continuous base trim**, ordered separately, can also be specified and is available in 10' lengths. When using 4" high base, panels and other vertical components must be specified with a modified height to accept 4" base trim and to ensure that the correct overall ceiling height is achieved.

*Tip: Other modified components that must be specified to accept 4" H base:*

- Panels*
  - Posts and adapters*
  - Feature strips*
  - Door frame*
  - Mini end*
  - Wall channels and cut kits*
  - Base trim*
- Tip: 4" high base cannot be used with base-located power.*

**Any or all of the standard muntin positions** can be moved. Muntins and glass horizontals can be no closer than 6 7/8".

**Muntin locations** apply to both the slider door and side panel.

**Muntin sizes** can be specified as 1 1/2" or 2 1/4".

**Additional muntins** can be added to a four divided lite slider to make up to six lites. Muntins and glass horizontals can be no closer than 6 7/8".

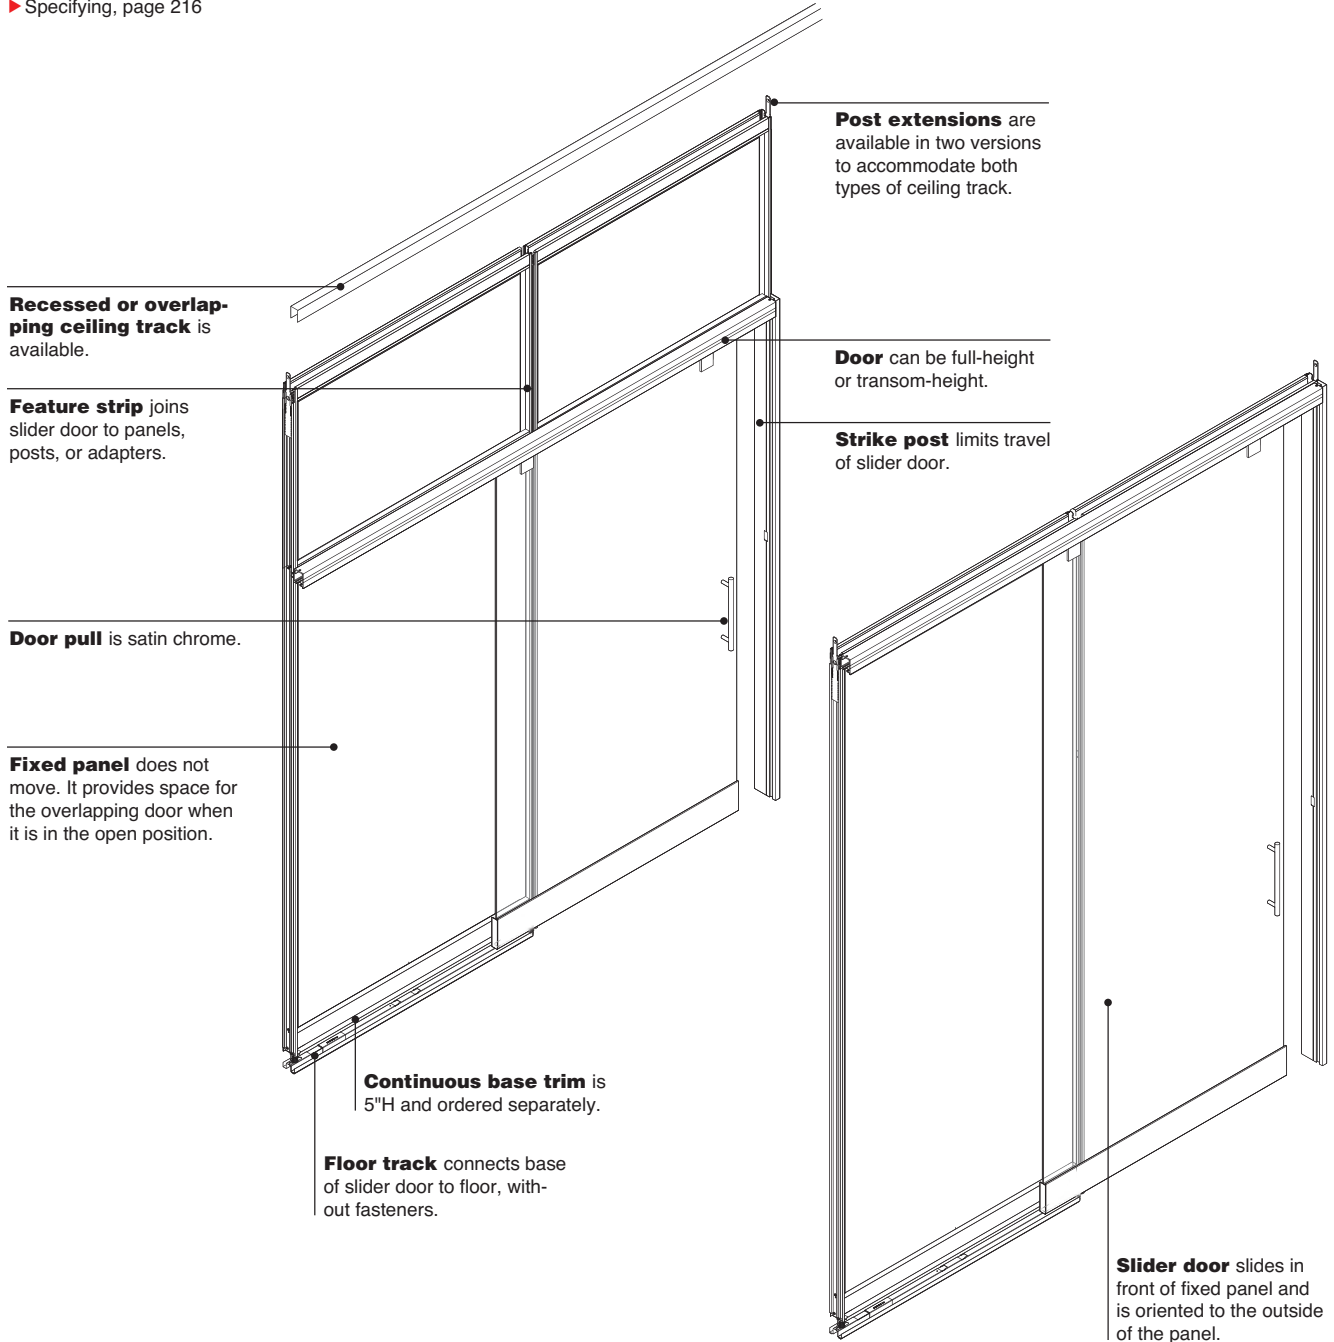

# Glass Selections Polished Edge Slider Doors

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Glass Selections slider doors** include door frame, slider door, fixed panel, and hardware.

► Specifying, page 216

**Product Details**

**Full-height slider doors** can be specified from 8'0"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.  
*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Transom-height slider doors** can be specified from 8'0"H to 10'0"H, in one-inch increments. Door height is always 7'. Transom-height varies depending on ceiling height.

**Ceiling track** allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions. **Floor track** allows 3/4" of vertical adjustment to accommodate variations at base.

**Width of slider door** is 80"W, 84"W, or 96"W. Full opening is slightly less than half of the total width of sliding door assembly.

**The glass selections slider door** is available with an optional close-assist feature. The close-assist mechanism offers the convenience of controlling the door through its final closing motion and provides an additional safety measure by slowing the door as it contacts the door frame. The glass selections slider door can be specified in the following configurations: no close-assist, close-assist on the leading edge of the door, or close-assist on both edges.

**Use of the self-close mechanism on doors** that exceed 32 square feet is not recommended, as the weight of the door may diminish the performance of the soft-close functionality to the point where it may not meet customer expectations. If specifying a full height door that is greater than 9' ceiling height, it is recommended to specify the overall slider assembly width at 80" or less (using a nominal 40" wide door).

**Slider door** is available left-hand and right-hand.  
*Tip: Slider door handing is oriented to the door side of the unit. Be sure to consider door position when determining handing.*

**Glass lite types** can be specified individually per section.  
 ▶ See *Surface Materials*, page 354.  
*Tip: For information regarding Etched and Pattern Glass Planning.*  
 ▶ Page 96.

**Some pattern glass types** have a linear pattern. These linear patterns are oriented vertically as shown.  
 ▶ See page 96 to identify vertical pattern glass.

**Muntins** are factory-installed horizontal framing elements that physically divide glass lites. Muntins are anodized aluminum.  
*Tip: Glass Selections muntins are 2 1/2"H.*

**Low-voltage switch cutout** is located in the side face of the finished opening frame.

**Low-voltage switches** can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

**Door lock with interior thumb latch** is available as an option. Locks are keyed randomly on single slider door only.

**Door base** is painted to match adjacent base trim. Base trim for the adjacent fixed panel is ordered separately.

Glass Selections Polished Edge Slider Doors, continued

**Plinths** are included to finish the bottom of both sides of a door frame.

**Continuous base trim**, ordered separately, is 5"H and available in 10' lengths. It runs along multiple panels and slider doors to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

**A vertical seal** can be specified and installed between the door frame and side panel to engage the trailing edge of the door when closed.

**Connections**

**Feature strips**, ordered separately, join slider doors to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

▶ Page 244

Recessed

Overlapping

**Ceiling track**, ordered separately, joins the top of doors to the ceiling. Ceiling track is available recessed or overlapping.

▶ Page 60

**Panel-supported storage and worksurface components** cannot be attached to slider doors. Use solid wall or Clerestory panels instead.

**Posts** join a slider door to a panel in an L-, T-, X-, or in-line configuration. A T-, X-, or in-line post can also be used between two slider doors.

▶ Page 82

**Adapters** connect a slider door to a panel in an L-, T-, or X-configuration. A T-adapter can also be used with two slider door strikes back to back.

▶ Page 78

**Back-to-back slider doors** will work with all adapters and posts when slider doors are on the outside of an office.

Plan view of T-post

Plan view of L-post

**Slider doors** will not work with an L- or T-adapter when slider doors are on the inside of an office. Use a post when positioning slide doors to the inside of an office.

*Tip: Slider door handing is oriented to the door side of the unit. Be sure to consider door position when determining handing.*

**Mini end** connects a slider door unit to a perpendicular building wall.

► Page 68

**When positioned next to a door frame**, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com/Sales Guides and more](http://village.steelcase.com/Sales Guides and more).

**Slider doors** are compliant with ADA guidelines for door openings, door hardware, and pull force.

Clear opening width when door is open is as follows:

Dimensions	
A	B
80"	33 <sup>5</sup> / <sub>16</sub> "
84"	35 <sup>5</sup> / <sub>16</sub> "
96"	41 <sup>5</sup> / <sub>16</sub> "

**Wiring & Cabling**

**Slider door** does not accommodate vertical wire and cable routing.

**Low-voltage switches** are available for Glass Selections slider doors.

**Surface Materials**

**Door frame and muntins**

- Clear anodized aluminum

**Lite**

- Glass

**Door base**

- Paint

**Base trim**

- Paint

**Feature strip**

- Plastic
- Fabric
- Vinyl
- Anodized aluminum

**Application Topics**

**Feature Strip Application**

► Page 86

# Glass Selections Polished Edge Slider Doors — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Full-height slider doors** can be specified from 7'5"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Special widths – side panel only:** special slider door assembly widths can be achieved by varying the width of the side panel while the door and frame remain unchanged.

80"W: 80" min – 100" max  
84"W: 84" min – 102" max  
96"W: 96" min – 108" max

**Special widths – door and side panel:** special slider door assembly widths can be achieved by varying the size of both the side panel and the door, keeping both symmetrical in width.

80"W: 78" min – 83" max  
84"W: 84" min – 95" max  
96"W: 96" is maximum width

**Slider doors with frame kit as side panel:** slider door frames and doors can be combined with frame kits and glass kits in variable widths.

40" door frame: 112" min – 184" max  
42" door frame: 114" min – 186" max  
48" door frame: 120" min – 192" max

**Glass Selections wall panels and frame kits** can be specified with painted surfaces as an alternative to anodized aluminum.

**Glass kit** must be ordered separately for slider with frame kit as a side panel.

**4" high continuous base trim,** ordered separately, can also be specified and is available in 10' lengths. When using 4"H base, slider door units and other vertical components must be specified with a modified height to accept 4"H base trim and to ensure that the correct overall ceiling height is achieved.

**Other modified components that must be specified to accept 4"H base:**

- Panels
  - Posts and adapters
  - Feature strips
  - Door frame
  - Mini end
  - Wall channels and cut kits
  - Base trim
- Tip: 4" high base cannot be used with base-located power.*

**Low profile base trim,** ordered separately, can be specified on Glass Selections slider units. The base height is 2 1/2"H and is available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other. When using low profile base, slider door units and other vertical components must be specified with a modified height to accept 2 1/2" base trim and to ensure that the correct overall ceiling height is achieved.

**Other modified components that must be specified to accept profile base:**

- Panels
  - Frame kits and glass kits
  - Feature strips
  - Posts
  - Door frame
  - Mini end
- Tip: Low profile base cannot be used with power.*

**Glass Selections slider doors,** when used with low profile base trim, have no bottom trim.

**Panels with low profile base** have reduced vertical adjustment at the floor (plus/minus 3/8").

Glass Selections Polished  
Edge Slider Doors –  
SmartTools Options

# Ceiling Tracks

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Ceiling track** attaches the top of Privacy Wall panels, door frames, and other components to the ceiling. Ceiling track is available in recessed or overlapping versions.  
 ▶ Specifying, page 234

**Recessed ceiling track** is set back from the surface of the panel on both sides.

**Factory-formed corner pieces** are available to form L- and V-configurations.  
*Tip: Use overlapping ceiling track with enhanced core panel to achieve greatest acoustical performance.*

## Product Details

**Straight ceiling track** is available in 120" lengths. It can be cut on site to accommodate any condition. Multiple straight lengths can be joined in line.

**Finished-end ceiling track** is available to finish the exposed end of a straight run of overlapping or recessed ceiling track.

**L corner pieces** are available recessed or overlapping to form 90° corners.

**V corner pieces** are available recessed or overlapping to form 120° or 135° corners.

**To join panels in a Y-configuration**, use straight ceiling track with an L corner piece.

**For panels joined in a T-configuration**, use two straight lengths of ceiling track, placed perpendicular to each other.

**For panels joined in an X-configuration**, use multiple straight lengths of ceiling track placed perpendicular to each other.

**T-clip** can be used for panels joined in a T-configuration to improve track alignment. Use two T-clips for panels joined in an X-configuration.   
▶ Page 238

**Connections**

**Ceiling track** can be removed and repositioned using optional hardware, without damaging ceiling grid or tile.

**Attachment hardware** is available in a variety of types to accommodate most standard ceiling types and other field conditions. To discuss unusual field conditions, call the Steelcase Solutions Resource Team at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to [lineone@steelcase.com](mailto:lineone@steelcase.com).   
▶ Page 234

**Ceiling clip attachment hardware** is included with ceiling track. Additional ceiling clips can be ordered separately for inventory or changes.   
▶ Page 236

**Panels that are wider than 48"** may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. When required by the local seismic design criteria, additional ceiling fasteners and/or structural bracing may be required. For more information regarding seismic applications, visit the Architectural Solutions web site at [village.steelcase.com](http://village.steelcase.com).

**Wiring & Cabling**

**Overlapping ceiling track** conceals power harnesses and cables routed vertically from the ceiling into a run of panels.

**Bypass cover** is available to conceal power harnesses and cables routed next to a recessed ceiling track as the conduit travels from the ceiling into a run of panels or a door frame.   
*Tip: Bypass cover must be used to conceal a ceiling infeed when the ceiling track is directly under a T-runner and when a modular infeed is being used.*   
▶ Page 238

**Surface Materials**

**Ceiling track**  
• Paint

# Ceiling Tracks — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Recessed and overlapping ceiling track** can be specified with wood veneer surfaces.

**V corner ceiling track sections**, 24" x 24" are available recessed or overlapping, in 5° increments, from 70° minimum to 175° maximum.

# Cornice Track

**Privacy Wall** is designed and intended for use with ceiling track that is connected to a suspended ceiling grid. In some cases, it may be desirable to install Privacy Wall in an application where there is no ceiling. In these cases, in order to provide an acceptable level of stability, it is necessary to follow the panel stability guidelines for cornice application. Also, cornice track is inserted into the top of the walls and fastened in place. Ceiling track is not used.

► Specifying, page 239

**Glass Selections** is not approved for applications with cornice track.

## Product Details

**Cornice track** is available in 120" lengths. It can be cut on site to accommodate any condition. Multiple straight lengths can be joined in line.

**When ordering panels and door frames**, specify the recessed option for ceiling track.

**Glass Selections** is not approved for applications with cornice track.

**Cornice-supported walls** cannot support panel-hung furniture components.

## Connections

**For panels joined in an L-configuration**, use two straight lengths of ceiling track, placed perpendicular to each other using a cornice track L bracket.

**For panels joined in a T-configuration**, use two straight lengths of ceiling track, placed perpendicular to each other using a cornice track T bracket.

**For panels joined in a X-configuration**, use three straight lengths of ceiling track, placed perpendicular to each other using a cornice track X bracket.

**When installing on hard surface floors**, it is recommended to use the universal floor grippers (GPUFG) at each in-line panel joint.

**Termination at wall channels or mini ends** requires a mechanical fastening to the foreign wall. Either plastic anchors or toggle bolts at drywall, or tapcons at concrete or masonry.

**When ordering panels and door frames**, specify recessed option for ceiling track.

**Glass Selections** is not approved for applications with cornice track.

**Cornice supported walls** cannot support panel hung furniture components.

**Maximum runs for solid panels** are 20 feet or 5 panels and both ends must terminate at an intersection or properly anchored termination. An intersecting wall must be at least 48" long.

**Maximum runs for solid panels including a door unit** is 16 feet, and both ends must terminate at an intersection or properly anchored termination.

**A maximum run for all glass fronts or all glass with a door unit** is 12 feet and both ends must terminate at an intersection or properly anchored termination.

**If intersecting wall includes two panels or more**, another intersecting panel is required at the end.

**Post and Beam, with a minimum beam length of 60"**, can be used for support in place of an intersection or termination, but only at one end of the wall. One end of the beam must be anchored to the floor or some permanent part of the structure. Only overhead beams should be used with Privacy Wall.

**When a single wall exceeds the maximum length as defined above**, an intermediate intersecting panel or Post and Beam can be inserted to stabilize the wall. If both ends of the wall intersect with either a fixed wall or a connecting wall that is 72" in length, then the intermediate panel can be as small as 24" wide.

**When required by the local seismic design criteria**, structural bracing may be required. For more information regarding seismic applications, visit the Architectural Solutions web site at [village.steelcase.com](http://village.steelcase.com).

# Ceiling Clip Application

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Exposed Tee Grids – Privacy Wall Fastener Kits

Ceiling clips support the most common types of ceiling systems.

**Bolt and Screw Grids – Privacy Wall Fastener Kits**

**Concealed Grids – Field-Purchased Generic Fasteners**

**For these and other types of ceilings, the following fasteners can be sourced locally by the installer:**

Concealed spline	#7 – 17 x 1 5/8" Bugle Head Self-Drilling Screws
Drywall	#14 – 1" Phillips Head SMS with plastic anchor
Plaster	1/4 – 20 Toggle Bolt
Concrete	Tapcon Anchor x 2"
Metal pan	#7 – 17 x 1" Bugle Head Self-Drilling Screws

# Mini Ends

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Mini ends** connect a panel to another panel or to a perpendicular building wall or column.

► Specifying, pages 177 and 225

**Verticals** on inner channel allows the mini end to connect to adjacent panel using feature strips. Panel slots remain accessible to support panel-supported furniture. The mini end has no slots and cannot support components.

**Neoprene seals** provide light and sound seal between the mini end and the building wall.

**Outer channel** has a flat surface to fit flush against vertical surface of the building wall. No permanent alteration to the building wall is needed.

**Inner channel** slips inside the outer channel to allow adjustability to fit specific field conditions.

**Mini end** consists of two telescoping components—inner channel and outer channel.

**Feature strip** joins the panel to the mini end in the same way that two panels are joined.

**Continuous base trim**, ordered separately, is added in the field. Mini end extends into the base cavity and is covered by base trim.

## Product Details

**Height** of mini end must be the same as the adjacent panel. Mini ends are available in all the same heights as panels. Indicate height when you order by specifying the ceiling height of the installation.

**Three sizes** of mini ends are available. Each telescopes to accommodate a different range of dimensions. For installations that require a dimension smaller than 1 1/2", use a wall channel. ► Page 72

For installations that require a dimension larger than 6", consider using a larger panel somewhere in the run or use a panel end cut kit. ► Page 76

Both recessed and overlapping ceiling tracks can be used with mini ends.

Base of mini end is finished with continuous base trim, ordered separately, like any panel.

When positioned next to a door frame, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

**Connections**

All panel types and door frames can connect to a mini end.

Adjacent panels connect to a mini end in the same way all panels connect. Feature strip on both sides of the panel form a continuous link to the mini end by engaging the verticals of the mini end and the adjacent panel.

Acoustic packing, when used with mini ends, may help to improve acoustical performance.

Physical connection to the building is not needed. Mini end fits tightly against the building wall, and the contact points are sealed with continuous neoprene strips to form a light and sound seal.

Panel-supported components cannot be attached to a mini end. Use the adjacent panel to support storage and worksurface components.

Due to the process steps involved in installation of glass, T-corner frame kits can be placed no closer than 20" to a single mini-end or wall channel.

**Wiring & Cabling**

Wire and cable routing vertically through a mini end is possible. Mini ends are often used to route power to a run of glass panels which don't have sufficient space to accommodate vertical power and cable routing.

**Surface Materials**

Surfaces of mini ends can be paint, fabric, vinyl, or anodized aluminum for Glass Selections. Both sides must be the same material and color.

**Mini end**

- Paint
- Fabric
- Anodized aluminum (Glass Selections only)

# Mini Ends — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Privacy Wall mini ends** can be specified from 7' 5"H to 11' 0"H, in one-inch increments, to accommodate different ceiling heights. *Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Glass Selections mini ends** can be specified from 7' 5"H to 10' 0"H, in one-inch increments, to accommodate different ceiling heights. *Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**When planning with 4" high base, or low profile base,** specify mini ends with modified height to accept 4" base trim and to ensure that the correct overall ceiling height is achieved. *Tip: Mini ends to the floor do not need to be modified for use with 4" base or low profile base.*

**Privacy Wall mini ends** can be specified with wood veneer surfaces.

**Mini ends** can be specified with an angled interface for end conditions that are not perpendicular to fixed surfaces. Angles are available in 5° increments ranging from 45° to 135°. *Tip: Mini ends can be adjusted during installation by as much as 3°.*

# Wall Channels

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Wall channels** connect panels with uncut edges to a perpendicular building wall or column.

► Specifying, page 179

**Neoprene seals** provide light and sound seal between the wall channel and the building wall.

**Shape** of the wall channel allows it to fit over the end of a solid panel.

**Wall channel** has a flat surface to fit flush against vertical surface of the building wall or window frame. No permanent alteration to the building wall is needed.

► See *Wall Channel Flexibility*, page 75.

*Tip: Wall channels are not available in anodized aluminum. Dimensions of wall channel do not allow for use with Glass Selections panels.*

**Continuous base trim**, ordered separately, is added in the field. Wall channel extends into the base cavity and is covered by base trim.

## Product Details

**Height** of wall channel must be the same as the adjacent panel. Wall channels are available in all the same heights as panels. Wall channel ships in 10' lengths and is cut to size in the field.

**Three sizes** of wall channels are available. Each accommodates a range of different dimensions.

► For the dimensions of glass panels and doors, see *Wall Channel Flexibility*, page 75.

Recessed

Overlapping

**Both recessed and overlapping ceiling tracks** can be used with wall channels.

**Wall channel** is cut to the top of the base trim and covered by the base trim.

**Solid panels** can be inserted to make use of full dimension of the wall channel.

**Glass panels** should not be inserted too deeply into the wall channel because the wall channel will overlap the glass.

► See *Wall Channel Flexibility*, page 75.

Wall channel

Leveler

**Specify** an end filler cut kit when cutting a panel into a wall channel. The end filler cut kit includes a wall channel and spreader.

**Connections**

Wall channel

**All panel types** can be used with a wall channel. Adjacent panel is inserted inside the wall channel.

**Acoustic packing**, when used with wall channels, may help improve acoustical performance.

**Physical connection** to the building is not needed. Wall channel fits tightly against the building wall, and the contact points are sealed with continuous neoprene strips to form a light and sound seal.

**Slotted edges of the adjacent panel** are blocked by wall channel. Use mini ends if planning with panel-supported furniture.

► For installations with cut panels, see *Cut Panels*, page 76.

**Wiring & Cabling**

Multipurpose infeed  
Vertical jumper

**Wire and cable routing vertically** through a wall channel is possible. Wall channels can be used to route power to a run of glass panels which don't have sufficient space to accommodate vertical power and cable routing.

**Surface Materials**

**Surfaces** of wall channels can be paint, fabric, or vinyl. Both sides must be the same material and color.

**Wall channel**

- Paint
- Fabric

**Application Topics**

Panel-end trim piece

Leveler

**Panel end cut kit** connects a cut panel to another panel in line. It restores leveler and housing that is removed when panel is cut on site. Kit includes trim piece to finish the cut side of the panel and to enable feature strip connection to an adjacent panel.

► Page 180

*Tip: Hang-on components are not allowed on cut panels.*

# Wall Channels — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**Wall channels** can be specified as 10'0\"H or 11'0\"H.  
*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Wall channels** can be specified with wood veneer surfaces.

# Wall Channel Flexibility

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Wall channels** allow panels to telescope inside. The amount of flexibility varies depending on the size of the wall channel and what type of panel it is or whether it is a door frame.

*Tip: Wall channels are not recommended for use with Glass Selections.*

*Tip: Order an end filler cut kit when positioning a cut panel at a wall channel.*

*Tip: 1" wall channel is recommended for use with glass panels. The 2 1/4" and 4" wall channels may overlap a portion of the glass area.*

## Solid Panels

## Glass Panels

## Door Frames

**Door frames** must be joined to a perpendicular building wall with a mini end, not a wall channel.

# Cut Panels

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Cut panels** are typically positioned at the end of a run, adjacent to a wall channel. Cut panels can also be positioned in the middle of a run. All cut panels require an end filler cut kit.  
 ▶ Page 181

**Solid panels** can be cut on site to allow walls to fit with existing building conditions. Glass panels cannot be cut.

**Plan your cuts** so that at least 4" of panel width is removed and at least 4" of panel remains. Angled cuts are possible if they conform to these guidelines.  
*Tip: When you need multiple cut panels, you may be able to specify a larger panel and cut it to produce two smaller cut panels.*

**Cut section of panel** must have at least one vertical edge intact to be functional.

**Panel end cut kit** is available to restore leveler and housing that is removed when panel is cut on site. Kit includes trim piece to finish the cut side of the panel and to enable feature strip connection to an adjacent panel.  
 ▶ Page 180  
*Tip: Hang-on components are not allowed on cut panels.*

**An end filler cut kit** is used when a cut panel is positioned adjacent to a fixed wall.

**A panel end cut kit** is used when a cut panel is positioned in the middle of a run or adjacent to a corner.

**Panel end** finishes the edge of a cut panel installed in line with other panels to produce a wall of a specific length. A panel end is typically used to achieve a specific length in a wall that has no wall channel. Panel end trim piece is included in the panel end cut kit.

**End filler cut kits** can be used to finish the edge of a panel that has been cut to conform to the specific shape of a perpendicular building wall, or when a panel is next to an architectural element such as a drywall partition. In this case, you will need to apply an end filler cut kit, which includes a wall channel, spreaders, and a leveler.  
 ▶ Page 181

**Surface materials** don't affect cutting. Painted, fabric, and vinyl surfaces can all be cut on site.

**Plan your cuts** with installation in mind to make sure that it will be possible to fit behind any soffits. Aligning cuts with boundaries may simplify installation.

# Adapters

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Adapters** engage the verticals on the edge of a panel to allow perpendicular panels to connect.  
 ▶ Specifying, pages 182 and 226

## Product Details

**Height** can be specified from 8'0" to 10'0", in one-inch increments, to accommodate different ceiling heights.

**Ceiling track** allows 1/2" of vertical adjustment to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment to accommodate variations at base.

**Finished-end adapter** caps the exposed vertical edge of the last panel in a run. Surface of the adapter is steel, covered in paint, fabric, or vinyl, or anodized aluminum for Glass Selections. The plinth, which is included in the finished end assembly, is painted to match the adjacent base trim. Finished-end adapter adds approximately 1 3/16" to the length of the wall.  
 ▶ See *Feature Strip Application*, page 86.

**L-adapter** allows a perpendicular panel to attach at the end of a panel. Surface of the adapter is steel, covered in paint, fabric, or vinyl, or anodized aluminum for Glass Selections.  
 ▶ See *Feature Strip Application*, page 86.

**T-adapter** allows a perpendicular panel to attach on the centerline between two panels joined in line.  
 ▶ See *Feature Strip Application*, page 86.

**X-adapter** allows two perpendicular panels to attach on opposite sides of the centerline between two panels joined in line.  
*Tip:* Base trim projects 1/16" from the face of the panel.  
 ▶ See *Feature Strip Application*, page 86.

**Panel end cut kit** can be used to finish the end of a cut panel so that it functions like a conventional panel and can make connections to an adjacent panel, door frame, or mini end. Surface of the adapter is painted steel.  
 ▶ Page 180  
*Tip:* Panel end is included in panel end cut kit.

**Connections**

**Any panel, door frame, or mini end** can be connected to an adapter.

**Feature strips**, ordered separately, join panels and other components to adapters and prevent light and sound leaks. Feature strip can be cut on site to provide access to the integral slotted verticals so that panel-supported components can be attached. To rearrange panels, feature strips can be removed and reused.  
 ▶ Page 244  
*Tip:* Anodized feature strips are designed for use with Glass Selection anodized door and glass frames. They are not compatible with upholstered panels.

**Overlapping or recessed finished-end ceiling track** is available for use with finished end adapter. This ceiling track component finishes the end of the ceiling track in the same way that the finished end adapter completes the exposed vertical edge of the last panel.  
 ▶ Page 234

**Blocked slots** occur on the edges of some panels in configurations with adapters. This makes it impractical to attach panel-supported components at these points.  
 ▶ For an overview of the planning choices, see *Centerline Versus Interior Dimension Planning*, page 88.

**T-adapters**, unlike T-posts, produce a simpler, cleaner visual by presenting one joint instead of two.

**Exact fit** between fixed elements, such as building columns, is possible by using a panel end cut kit. The cut panel behaves exactly like a conventional panel but its width dimension can be modified on site to match field conditions.  
*Tip:* You cannot hang furniture on a cut panel.  
 ▶ See *Cut Panels*, page 76.

**Wiring & Cabling**

**Adapters** do not accommodate vertical wire and cable routing.

**Surface Materials**

**Finished-end adapter and L-adapter**

- Paint
- Fabric
- Anodized aluminum (Glass Selections only)

# Adapters — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**When planning with 4" high base or low profile base,** specify adapters with modified height to accept 4"H or 2 1/2"H base trim and to ensure that the correct overall ceiling height is achieved.  
*Tip: Base trim is ordered separately.*

7'5"H to 11'0"H

**Privacy Wall adapters** can be specified from 7'5"H to 11'0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Privacy Wall L- adapters and finished ends** can be specified with wood veneer surfaces.

7'5"H to 10'0"H

**Glass Selections adapters** can be specified from 7'5"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

# Posts

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

**Posts** join panels in a variety of configurations.  
► Specifying, pages 184 and 227

## Product Details

8'0"H to 10'0"H

**Height** can be specified from 8'0" to 10'0", in one-inch increments, to accommodate different ceiling heights.

**Ceiling track** allows 1/2" of vertical adjustment to accommodate variations in field conditions. **Floor track** allows 3/4" of vertical adjustment to accommodate variations at base.

L-post

L-post has a square profile.

Y-post is made up of a 90° corner and two 135° angles.

V-post is available either 120° or 135°.

**Configurations for posts** include in-line, L, T, X, V, Y, and I-Line interface.

*Tip: Base trim projects 1/16" from the face of the panel.*

**Connections**

Any panel, door frame, or mini end can be connected to a post.

**Feature strips**, ordered separately, join panels and other components to posts and prevent light and sound leaks. Feature strip can be cut on site to provide access to the integral slotted verticals so that panel-supported components can be attached. To rearrange panels, feature strips can be removed and reused.

▶ Page 244

**Posts** are often more appropriate when planning with interior room dimensions.

*Tip: Remember to allow for post dimensions when calculating the overall length of a wall.*

▶ See *Centerline Versus Interior Dimension Planning*, page 88.

**Wiring & Cabling**

**Posts** can be used to vertically route power and cable infeeds down from the ceiling or up from the floor.

**Post**

- Paint
- Fabric
- Vinyl
- Anodized aluminum (Glass Selections only)

**Base trim**

- Paint

**Feature strip**

- Paint
- Fabric
- Anodized aluminum

**Application Topics**

**Feature Strip Application**

▶ Page 86

**Centerline Versus Interior Dimension Planning**

▶ Page 88

**Slotted verticals** are available when using posts.

▶ For an overview of the planning choices, see *Centerline Versus Interior Dimension Planning*, page 88.

# Posts — SmartTools Options

**Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.**

## Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

**When planning with 4" high base or low profile base, specify adapters with modified height to accept 4"H or 2 1/2"H base trim and to ensure that the correct overall ceiling height is achieved.**

*Tip: Base trim is ordered separately.*

7'5"H to 11'0"H

**Privacy Wall posts** can be specified from 7'5"H to 11'0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**Privacy Wall L-adapters and finished ends** can be specified with wood veneer surfaces.

7'5"H to 10'0"H

**Glass Selections posts** can be specified from 7'5"H to 10'0"H, in one-inch increments, to accommodate different ceiling heights.

*Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.*

**V-post** can be specified at different angles in 5° increments, from 70° minimum to 175° maximum.

*Tip: Base trim and ceiling track can also be ordered in corresponding angled configurations.*

*Tip: Each angled post has different dimensions. Exact dimensions should be requested through the quote process.*

# Feature Strip Application

**Use the table at right** to determine the quantity of individual feature strips you need in specific applications.

*Tip: For correct fit of feature strips, you must specify type of components that will be used in conjunction with feature strips. Example: One painted component and one upholstered component.*

▶ See page 244 to order feature strips.

**Two kinds** of feature strips are available. They are available individually (style numbers GPFS1, GPFSH1, GPFS1A, or GPFSH1A available in 10' only) or in packages of 25 (style numbers GPFS, GPFSH, GPFS1A, or GPFSHA ordered by 1" increments).

**When positioned next to a door frame**, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

**In-line feature strips** are used when joining two surfaces on the same plane. They can be specified to correspond to the installation height, or 120"-long feature strips are available to be field-cut.

**Half feature strips** are used in combination with in-line feature strips for inside corner applications.

*Tip: To ensure best fit for feature strips, specify a wall application option.*

▶ Page 244

**Specify both a painted and fabric half feature strip** for Clerestory panels with one painted and one upholstered component.

**When ordering painted feature strips**, specify the type of wall application for the adjoining components.

**For use with two painted components.**

**For use with one painted and one upholstered component.**

**For use with two upholstered components.**

**For Clerestory panels**, you can specify two different feature strips when the solid-panel finish is different from the upper-glass frame finish.

**Furniture reveal strips**, ordered separately, are positioned between two sections of in-line feature strip to allow access to one set of panel slots when a single component is mounted on a Privacy Wall panel. When components are mounted side by side, both sets of slots are left exposed, and there is no need for a furniture reveal strip. Furniture reveal strips are painted to match the adjacent wall panel or to match the component bracket.

*Tip: Use of hang-on components with enhanced core panels may reduce acoustic effectiveness.*

▶ Page 247

**Furniture reveal strips** are used when hanging components on Privacy Wall panels. The furniture reveal strip finishes off one half of an in-line panel joint, while allowing access to panel slots. They are cut to size from a 34" length as part of the installation process. Typically, one 34" strip is adequate to trim out both edges of a worksurface or storage cabinet.

▶ Page 247

**Privacy Wall** uses the same furniture interface as Answer. When specifying overhead storage and worksurfaces to be mounted on Privacy Wall, select the Answer bracket option.

Product	Number of in-line feature strips GPFS, GPFSH1, GPFS1A, or GPFSA	Number of half feature strips GPFSH, GPFSH1, GPFSHA, or GPFSH1A
Panel	2	0
Hinged door frame	2	0
Slider door unit	4	0
Mini end	2	0
Panel end cut kit	2	0
Finished-end adapter	2	0
L-adapter	1	1
T-adapter	0	2
X-adapter	0	4
L-post	1	1
T-post	2	2
X-post	0	4
In-line post	2	0
V-post	0	2
Y-post	1	1
I-Line interface post	2	0

**When hanging furniture on panels,** optional acoustic seals can be field-applied to the cantilever or shelf brackets to minimize sound transmission through the wall.

**Low-voltage switches** can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

# Centerline Versus Interior Dimension Planning

## Planning Choices

Architects and designers typically use either centerline planning or inside-dimension planning when laying out walls. Privacy Wall supports either approach or a combination. Your decision about which strategy to use will depend on your building and integration and interface issues. Each approach offers its own advantages and disadvantages.

**Centerline planning** concerns the distance between the centerline of walls; the thickness of the walls is a secondary consideration. For example, two parallel walls that are  $2\frac{3}{8}$ " thick and with centerlines that are 96" apart will produce an interior space that is  $93\frac{5}{8}$ "W.

**Interior planning** concerns the physical dimensions of the room created by walls. For example, to create an interior space that is 96"W, two parallel walls that are  $2\frac{3}{8}$ " thick would have a centerline dimension of  $98\frac{9}{16}$ ".

### Using Adapters

#### Advantages

- Allows centerline planning.
- No creep added to the dimensions of the run of panels in one axis.
- Lower cost than using posts at T- and X-corners.
- Clean visuals. No double feature strips visible when the back side of the wall doesn't have perpendicular panels.

#### Disadvantages

- Vertical slots in some panels will be blocked by overlapping panels and therefore cannot accommodate panel-supported storage or worksurface components.

### Using Posts

#### Advantages

- Ideal for interior dimension planning because the inside dimensions of the room will always match the dimensions of the panels that make up the wall.
- Vertical slots will never be blocked, so adding panel-supported storage or worksurfaces is never a problem.

#### Disadvantages

- Must allow the  $2\frac{11}{16}$ " increment that each L-post adds and  $2\frac{11}{16}$ " increment that each T-post adds to the length of the run of panels.

- Posts and two feature strips will be visible on the opposite side of the wall if no panels are joined at those points.
- More expensive than using adapters at T- and X-corners.

**Combining Techniques**

In some applications it is desirable to combine centerline planning with inside-dimension planning. For example, you might want a front wall that produces alignment in a building that has columns or window elements on centerlines that are spaced 96" apart. But along the cross walls, you may want to use inside-dimension planning to ensure that standard-sized furniture components, such as workspaces and bins, will match panel dimensions.

**Interior dimension planning** along cross walls means that vertical slots will be available to attach storage components and workspaces to cross wall panels.

**Centerline planning** along front wall allows fin walls to match centerlines of building elements such as columns, window frames, and ceiling grid.

**Adapters and posts** add different dimensions to a run of panel depending on the configuration.

# Base Trim Details

## Panels

### In-line

### Inside corner

Continuous base trims meet at an inside corner regardless of angle.

### Outside corner

One-piece outside corner base trim must be specified to trim outside panel corners regardless of angle.

## Doors

### Inside corner

### Outside corner

**Back-to-back**

**Inside slider door**

**Two doors separated by a post**

**Outside slider door**

## Base Trim Details, continued

### Product Details for SmartTools Options

**SmartTools Options** are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request for Quote) process.

# How to Connect Privacy Wall to I-Line Moveable Walls

**I-Line interface posts** connect Privacy Wall to its predecessor, I-Line Moveable Walls.

**Two I-Line feature strips** are required for the I-Line side of the connection.

**Two Privacy Wall feature strips** are required for the Privacy Wall side of the connection.

**I-Line interface post** can be cut in the field.

## Product Details

**Width of I-Line interface post** adds  $1\frac{1}{4}$ " to the width of any panel it is attached to. Because a Privacy Wall modular panel is  $1\frac{1}{4}$ " less wide than a standard panel, using an I-Line interface post with a Privacy Wall modular panel will retain the overall dimension of a regular panel.

**Ceiling track**, ordered separately, continues uninterrupted from the I-Line panel to the Privacy Wall panel. Ceiling track is available recessed or overlapping.

**Continuous base trim** on Privacy Wall panels extends over the I-Line interface post. I-Line panels have their own base trim. Height of both I-Line and Privacy Wall base trims may vary slightly.

**Connections**

**Any Privacy Wall panel or door frame** can connect to I-Line using an I-Line interface post.

**In-line connections** are possible by adding an I-Line interface post between Privacy Wall and I-Line panels.

**I-Line interface posts** attach to adjacent posts in L-, T-, X-, V-, and Y-configurations.

**T- and X-adapters** can be used to connect Privacy Wall to I-Line Moveable Walls.

**Wiring & Cabling**

**Power** cannot be routed vertically inside an I-Line interface post. The post allows horizontal cable routing at the base.

**Surface Materials**

- I-Line interface post**
  - Paint
  - Tip: Not all Privacy Wall paint colors match classic I-Line paint colors.*
  - Fabric
  - Vinyl

# Etched and Pattern Glass Planning

## Planning Guidelines

You should consider the orientation of the faces of etched and pattern glass in relation to the insides and outsides of rooms.

**Etched glass** should be installed with the rough side facing the inside of the room and the smooth side facing the corridor. This placement allows for easier cleaning of the more heavily traveled corridor.

**Pattern glass** should be installed with the rough side facing the corridor and the smooth side facing the inside of the room. This placement allows more people to appreciate the visually interesting and attractive side of the glass.

**When using etched and/or pattern glass on the slider doors,** the glass will be oriented as outlined above when the door is positioned on the outside of the room. If slider doors are to be positioned on the inside of the room and glass surfaces are desired to be oriented outlined above, the slider door units must be ordered through specials.

**Clerestory panels that** are ordered with split finish surfaces or single sided electricals will be oriented to side one and side two. When determining how to order these, keep in mind that glass surfaces are always oriented as follows: for etched glass, the rough side will be oriented to side two; for pattern glass, the rough side will be oriented to side one.

## Etched glass

Satin

## Pattern glass

Bamboo  
Harp  
Mirage

## All other glass types

are either rough on both faces or smooth on both faces.

# How to Power a Panel

**Factory-installed components** are available to power panels with receptacles at desk height, ADA height, or at the base of the panel. Power infeeds can feed through the ceiling or the floor.

*Tip: Bypass cover may be required when specifying recessed ceiling track.*  
 ▶ Page 234

**Ceiling infeed** can be factory installed in panel to ADA or desk height, or field installed at base height.

**Communication cable,** field installed.

**Power and communication receptacles** are factory installed at ADA height, desk height, or base height.

**Floor infeed** can be factory installed in panel at ADA or desk height, or field installed at base height.

**Power blocks** can be factory or field installed at ADA height, desk height, or base height. ADA and desk-height power blocks are available in hollow core panels only.  
*Tip: For power installation at ADA or desk height in the field, you must use a power and communication powerkit and cover plate. Powerkits with power blocks and communication openings can only be installed in the field at ADA- or desk-height locations.*

**Vertical jumper,** factory installed to extend power between power blocks at base height, desk height, and ADA height.

**Modular harness,** field installed

**Power blocks,** factory or field installed at base height.

**Base power infeed**  
*Tip: Multipurpose infeeds can be installed to route power to base from floor or ceiling.*

**Powering a Privacy Wall panel** requires five things—power blocks, receptacles, cutouts in the surface of the panel to access the receptacles, a harness or infeed to bring power to the power block, and a cover plate or power and communication base trim to trim the opening.

**Power Blocks**

**Power blocks** must be installed in a panel in order to accommodate power receptacles. Power blocks can accommodate receptacles on one side or both sides of a panel.

Desk height 34" ADA height 21" Base height

**Three different heights** are possible for power blocks—desk height, ADA height, and base height. Any combination of these heights is possible. ADA and desk-height power blocks are available in hollow core panels only. *Tip: When placing furniture on or in front of a powered panel, review the furniture type and position to avoid obstructing the power or communication termination.*

**Utilities** can be specified on either side of the panel or on both sides. Receptacles can be installed on either side of the panel or on both sides. Fillers can be installed in any unused cutouts.

**Power** is located in the center of a panel except in Glass Selections frame kits, where power is located 12" from the panel edge. *Tip: If using base trim with power and communication cutout, plan on placing cutouts at right edge of panel.*

**Power blocks** can be located in the base without cutouts to continue distribution of power between panels.

**Panel type** determines which receptacle locations are available. For example, solid wall panels can have receptacles in any position, but glass wall panels can have receptacles in the base only.

Panel Type	Desk-height	ADA-height	Base
Solid	●	●	●
Glass	N.A.	N.A.	●
Clerestory	●	●	●

**Field-installed power-kits, infeeds, and jumpers** can be ordered separately and added on site. For installations at desk or ADA height, solid panel surface must be cut carefully to position power block correctly and to accommodate cover plate. Power and communication is available in panel face only.

**Receptacles**

**Receptacles** are ordered separately and field installed in power blocks. Separate duplex receptacles are available to engage each of the different circuits that are possible in the electrical system. Receptacles are coded to indicate which circuit and type of ground they engage. **▶ Page 251**

**USB receptacles** are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

**Installation** is done on site. Receptacles snap into power block. Tools are not required for installation.

**Cutouts**

**Power and communication base trim**, ordered separately, frames receptacles and communication outlets. Three kinds are available—power only, power and communication, and communication only. *Tip: Base communication cutouts are designed to accommodate only NEMA faceplates. Cutout is 3"W x 2"H.*

**Power and communication base trim for Chicago and New York City power**, ordered separately, frames receptacles and communication outlets. Two kinds are available - power only, and power communication. *Tip: Base communication cutouts are designed to accommodate only NEMA faceplates. Cutout is 3"W x 2"H.*

## How to Power a Panel, continued

The **floor track** is factory cut at both ends to provide access for multipurpose infeeds that are routed up from the floor.

Power-only

Power and communication

**Plastic cover plate**, ordered separately, frames receptacles and communication outlets in the panel face. Two kinds of cover plates are available—power only and power and communication. They are required for utilities in the panel surface.

▶ Page 253

**Width of panel** must be adequate to accommodate cutouts.

- Panels that are 30"W (standard or modular) can accommodate power and/or communication in any position or configuration.
- Panels that are smaller than 30"W cannot accommodate power or communication in any configuration.

**Communication opening** is sized to accommodate a standard NEMA-size faceplate, modular furniture faceplate, or Decora mounting strap style outlet supplied by the electrician.

**Fillers**, ordered separately, fill empty receptacle and communication openings. *Tip: Power and communication filler is not designed for use with the base communication cutout. Fillers for this NEMA-size cutout should be sourced locally.*

### Infeeds

Ceiling infeed

**Ceiling infeeds** are factory installed to bring power to a power block installed at desk height or ADA height. Harness orientation is standard on the left side when facing side 1. *Tip: Panels that are less than 24"W are not factory punched for infeeds.*

Floor infeed

**Floor infeeds**, for use with raised floor systems, are factory installed to bring power to a power block installed at desk height or ADA height. Harness orientation is standard on the left side when facing side 1. Factory-installed infeeds extend a minimum of 12' from the panel.

*Tip: Panels that are less than 24"W are not factory punched for infeeds.*

**Base power blocks** always receive their power from field-installed harnesses or factory-installed jumper harnesses.

▶ Page 102

**Field-installed multi-purpose infeed** can be used to bring power from the ceiling or floor by routing it through an adjacent component such as a mini end or post.

Base power infeed

**Field-installed base power infeed** can bring power from a floor monument to a power block in the base of a panel. Floor infeed harness at the base occupies one receptacle location in the base power block.

Modular harness

**Field-installed modular harness** can bring power from a power block installed in the base of an adjacent panel.

▶ To calculate harness length, see page 106.

**Harness-to-harness connector or branching harness-to-harness connector**, ordered separately, links harnesses. Harness-to-harness connector allows multiple harnesses to connect to allow power networks to branch.

Hardwire

Modular

**End of the power infeed** can be hardwire or modular. Hardwire allows the electrician to make a conventional connection to the building's power inside a junction box. Modular allows the infeed to connect to any corresponding modular connector or harness using a harness-to-harness connector. This is the same modular connector used by Answer, Montage, and Architectural Solutions Modular Power System.

**Modular infeed cover** is included with modular multi-purpose infeed to hardwire to a junction box. It allows modular connector to snap into position. This allows walls to be disconnected, moved, and reconnected later.

Vertical jumper

**Vertical jumper** is factory installed to extend power between power blocks at base height, desk height, and ADA height. Jumper can also be field installed to achieve same configuration.

**Glass panels** cannot accommodate vertical routing of power harnesses through the glass portion of the panel. Use adjacent panels, mini ends, or door frames to accommodate a field-installed multipurpose infeed.

*Tip: A power switch installed in a door frame will block the path of a multipurpose infeed.*

**Chicago and New York City electrical code**

requires that all power be hardwired in the field. Modular power systems are not permitted. All panels can be hardwired on site using conventional electrical components.

**Desk or ADA power and communication in Chicago and New York City** can be accommodated in two ways.

**Specify the Chicago/New York City hardwire power prep option**

and the factory will cut the panel at desk and/or ADA height on one side of the panel. This allows the electrician to install a Chicago/New York City junction box and hardwire standard Decora-style receptacle(s) in the field. Order power/communication Chicago/New York City junction box and cover plate separately. Only power/communication is available with this option.

*Tip: Hardwire power boxes cannot be double sided.*

**New York City/Chicago prep option** requires use of Privacy Wall cover plate, ordered separately.

▶ Page 253

**San Francisco electrical code** requires that base power infeeds be encased in metallic liquid-tight conduit.

**Electrician** can cut solid or Clerestory panels in the field and install conventional components (junction box, receptacle, outlet cover, and conduit) as in typical drywall construction.

**Base power for panels installed in Chicago or New York City** is hardwired in the field using conventional components (Decora-style receptacle, junction box, conduit) supplied by the electrician.

*Tip: Order Chicago/New York City base trim.*

**All Privacy Wall electrical components** are listed by Underwriters Laboratory (UL) and certified by the Canadian Standards Association (CSA).

**All Steelcase electrical systems** are designed in compliance with the National Electrical Code (NEC) and Canadian Electrical Code (CEC) to function as a multi-wire branch circuit. Installations should be made in accordance with the NEC or CEC provisions for multi-wire branch circuits.

**Local electrical codes vary.** Consult a qualified electrical contractor or engineer for the proper installation of electrical equipment.

**Specifying**

For guidelines about the steps to specify power components for a panel, see *Power Options*.  
▶ Page 138

# Overview of Powered Panels

## Power in Base

**Power in the base of a solid or glass panel** can be energized using field-installed harnesses or infeeds.

**Power source A:** Field-installed harness from adjacent panel with power in base.  
▶ Page 138

**Power source B:** Field-installed multipurpose infeed from ceiling through hollow core in solid panel.  
▶ Page 138

**Power source C:** Field-installed multipurpose infeed from floor.  
▶ Page 138

**Power source D:** Field-installed base power infeed from floor monument or adjacent wall. Occupies one receptacle location.  
▶ Page 138

## Power at Desk Height or ADA Height

**Power source E:** Factory-installed ceiling infeed.  
▶ Page 138

**Power source F:** Factory-installed floor infeed.  
▶ Page 138

**Power source G:** Factory-installed vertical jumper. Base must receive power using one of the approaches shown at the top of the page. When base/ADA/desk combinations are specified, a jumper will be factory installed.  
▶ Page 138

**Power blocks** can be located in the base without cutouts to allow for distribution of power or to bring power from floor or ceiling.

**Power in Panels with Glass**

Power cannot be routed vertically through the glass portion of a Clerestory panel so desk-height and ADA-height receptacles in glass panels always receive power from below.

*Tip: Power block in base doesn't have to be expressed. You may choose to use it only as a connection point for an infeed and not install base trim with receptacle openings.*

**Power source F:**  
Factory-installed floor infeed.  
▶ Page 138

**Power source G:**  
Factory-installed vertical jumper. Base must receive power using one of the approaches shown on previous page.  
▶ Page 138  
*Tip: When base/ADA/desk combinations are specified, a jumper will be factory installed.*

**Adjacent mini end** can be used to route a field-installed multipurpose infeed. Factory-installed vertical jumper can extend power to desk height or ADA height.  
*Tip: When base/ADA/desk combinations are specified, a jumper will be factory installed.*

**Adjacent door frame** can be used to route a field-installed multipurpose infeed.  
*Exception: Switch installed in routing side of door frame will block harness.*

# Wiring Schematics

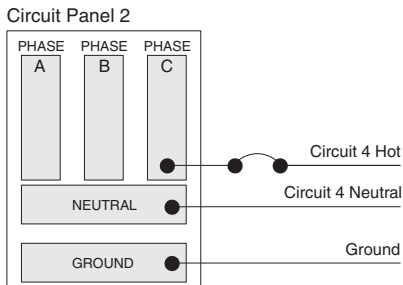

## Details for the Electrician

**Privacy Wall modular power components** are offered in three different wiring schematics to allow you to match your specific wiring strategy to any typical building wiring plan.

*Tip: All the components in an electrical system must use the same wiring schematic. The components are color coded and keyed to make it impossible to connect mismatched parts.*

- Black = Four-circuit, 3+1
- Brown = Four-circuit, 2+2
- Rust = Three-circuit, separate neutrals
- Shared neutral conductors = 10 gauge
- Separate neutral conductors = 12 gauge
- Hot conductors = 12 gauge
- Grounding conductors = 12 gauge

### Four-Circuit, 3+1

**In the four-circuit 3+1 schematic,** circuits 1, 2, and 3 are distributed from the first circuit panel and are supported with one shared neutral and one shared ground. Circuit 4 is distributed from a second circuit panel and is supported with a separate neutral and ground.

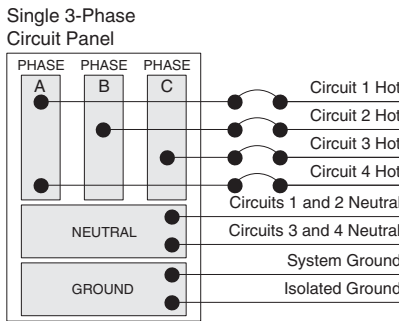

**On a single 3-phase circuit panel,** all four circuits are distributed as shown.

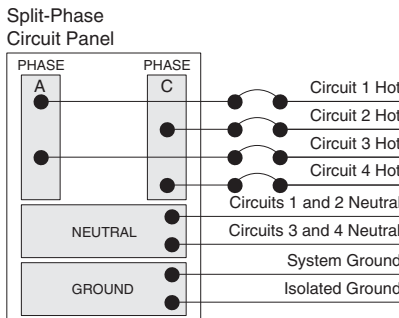

### Four-Circuit, 2+2

**In the four-circuit 2+2 schematic,** circuits 1 and 2 are distributed from two different phases from the first circuit panel and are supported with one shared neutral and one shared ground. Circuits 3 and 4 are distributed from a second circuit panel and supported by their own shared neutral and ground.

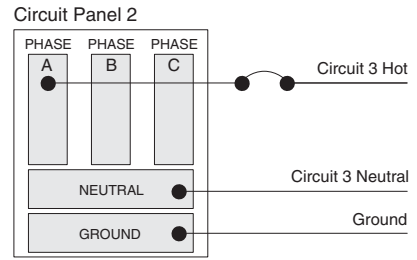

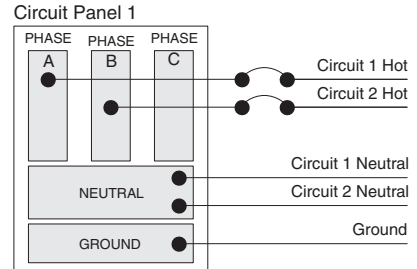

**On a single 3-phase circuit panel,** all four circuits are distributed as shown.

**On a split-phase circuit panel,** all four circuits are distributed as shown.

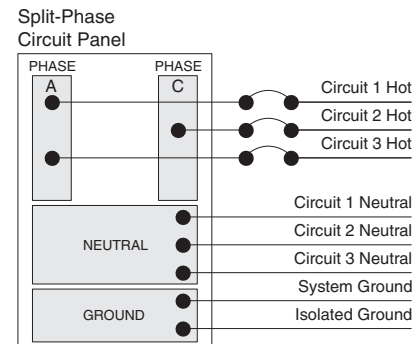

### Three-Circuit, Separate Neutrals

**In the three-circuit, separate neutral schematic,** circuits 1 and 2 are distributed from two different phases from the first circuit panel. Each circuit is supported with its own neutral and a common ground. Circuit 3 is distributed from the second circuit panel and is supported by its own neutral and ground.

**On a single 3-phase circuit panel,** three circuits are distributed as shown.

**On a split-phase circuit panel,** three circuits are distributed as shown.

# How to Calculate Power Needs

Use This to Determine How Many Power-Ins You'll Need

**When planning a power network,** you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

**If your usage is not known in advance:** The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in and 40 receptacles for each 4-circuit power-in.

**If your usage is known in advance:** Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60 amps (20 amps times 3 circuits) or 80 amps (20 amps times 4 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.

▶ See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

## Approximate power consumption for common devices

• Device	• Wattage	• Amperage	• Voltage	• Number of Devices Supported on Single 20 Amp Circuit*
Laptop	90	0.8	110	20
CPU/Desktop Computer	120	1.1	110	15
Monitor	60	0.5	110	29
Phone	5	0.0	110	352
High Power Tablet (e.g. Surface Pro)	40	0.4	110	44
Low Power Tablet (e.g. iPad Air)	15	0.1	110	117
Desktop Printer	40	0.4	110	44
42" LCD Screen	210	1.9	110	8
DVD Player	25	0.2	110	70
Projector	175	1.6	110	10
Desktop Lamp	19	0.2	110	93
Large Printer/Copier (high)	1900	17.3	110	1
Large Printer/Copier (low)	850	7.7	110	2
Paper Shredder	360	3.3	110	5
Desktop Fan	20	0.2	110	88
Standing Fan	180	1.6	110	10
Coffee Maker (high)	1200	10.9	110	1
Coffee Maker (low)	600	5.5	110	3
Microwave (high)	400	13.6	110	1
Microwave (low)	150	5.5	110	3
Refrigerator (high)	1500	3.6	110	4
Refrigerator (low)	200	1.4	110	12
Vacuum (high)	1500	13.6	110	1
Vacuum (low)	200	1.8	110	9
Space Heater (high)	1500	13.6	110	1
Space Heater (low)	750	6.8	110	2

*Tip: These calculations are estimations and are meant solely for informational purposes. It is important to conduct proper power planning for each installation to prevent overloading a circuit.*

# Field-Installed Modular Harness Length Guidelines

**Modular harnesses** allow power to be extended from one power block to another. Use the guidelines on this page to determine harness length.  
 ▶ Page 256

*Tip: For field-installed ADA-to-desk connections, order desk-height to ADA-height jumper.*

*Tip: Harnesses stretch 3". For example, a 33" harness will allow for a 33" to 36" connection.*

*Tip: When two powered panels are separated by a third panel, calculate the harness length by adding the result of these tables plus the width of the third (middle) panel.*

*Tip: Power is located in the center of a panel except in Glass Selections frame kits, where the center of the power is located 12" from the panel edge. All GS frame kits connect with the same size harnesses, regardless of width.*

GS = Glass Selections

# Solid Wall Panels with Hollow Core

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: Paint price group 2 is only available on panels 36"W or smaller.

Tip: Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. For more information regarding seismic applications, visit the Architectural Solutions Web site at [village.steelcase.com/Sales Guides and more](http://village.steelcase.com/Sales Guides and more).

Standard Includes		Required to Specify

• Continuous base trim	► Page 240
• Feature strips	► Page 244
• Power receptacles	► Page 251
• Power and communication cover plates	► Page 253
• Infeeds	► Page 254
• Modular harnesses	► Page 256
• Field-installed powerkits	► Page 258
• Cornice track	► Page 239

Tip: To price power in two locations, add the upcharges together.

Tip: Infeed is included in price of ADA- or desk-height receptacle power location option. Base power block location does not include infeed. It must be ordered separately, if needed.

Tip: NYC/CHI prices replace the receptacle power location option prices when selected.

Tip: Order power and communication and power-only cover plates separately.

Tip: Panels that are less than 24"W are not factory punched for infeeds.

Tip: SmartTools options are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request For Quote) process.

Tip: Markerboard surface cannot exceed 48"W or 120" in height.

Tip: Standard Privacy Wall ceiling heights are 8'0" through 10'0".

Tip: Panels for ceiling height of 10'1" to 11'0" are available in width up to 48"W only.

SmartTools Options	U.S. Price	Required to Specify
<b>7610 White Markerboard Surface</b>	• 6"W through 24"W +\$487	Specify with markerboard.
	• 25"W through 36"W +\$523	Specify with markerboard.
	• 37"W through 48"W +\$559	Specify with markerboard.
<b>Parametric Ceiling Height</b> (Available in 1" increments)	• 7'5" through 7'11" No cost	Specify ceiling height in 1" increments.
	• 10'1" through 11'0" +\$163	Specify ceiling height in 1" increments.
<b>Parametric Panel Widths</b> (Available in 1" increments)	• Non standard widths No cost	Specify panel widths in 1" increments.
	• Non standard modular widths No cost	Specify panel widths in 1" increments.
<b>Base</b>	• 4"H base +\$ 63	Specify to accept 4"H base.

# Power Options

**This page** guides you through specifying Privacy Wall panels. Use these steps to specify factory-installed power components or communication openings in panels, or to have the factory alter panels to accommodate field-installed power.

*Tip: Chicago and New York City electrical code requires field-supplied components to be field installed.*

**Factory-installed power components** are available in all Privacy Wall panels. Use the options on this page to tell the factory how to assemble your panels so they include the power components you want.

**Field-installed power components** are required in New York City and Chicago. To streamline installation, use the options on this page to tell the factory how to modify the panels so they are ready to accept the power components you must order or supply separately. For details about how power is accommodated in Privacy Wall panels, see:

- ▶ [How to Power a Panel](#), page 98
- ▶ [Overview of Powered Panels](#), page 102

**This page** guides you through specifying Privacy Wall panels. Use these steps to specify factory-installed power components or communication openings in panels, or to have the factory alter panels to accommodate field-installed power.

## Specifying

### Panels

**1** Choose appropriate panel width to accommodate power and communication receptacles. See the table below for minimum widths.

### Power and Communication

Desk height and ADA height

- 30"W standard panel
- 30"W (nominal) modular panel

At base

- 30"W standard panel
- 30"W (nominal) modular panel

### 2 Power schematic

Specify the power schematic:

- 4-circuit, 3+1
- 4-circuit, 2+2
- 3-circuit, separate neutrals (3SN)
- Chicago and New York City power and communication power prep

### 3 Power locations

Specify one or more of the following power locations that is available on the panel type you have chosen:

- Desk height
- ADA height
- Base
- Base and desk height
- Base and ADA height
- Desk and ADA
- Desk, ADA, and base

### 4 Utility choices by locations

Cutouts are only available in the positions you specified for power locations in step 3. See the table below for utility choices and designate side 1, side 2, or both side 1 and side 2.

*Tip: For New York City and Chicago power prep options, no specification for utility choice at base height is needed because you add components in the field.*

### Desk height

- Power only
- Power and communication

### ADA height

- Power only
- Power and communication

### Base height

- Power only
- Power and communication
- Communication only

### 5 Remember to specify

receptacles, cover plates, and power and communication base trim to finish your panel.

*Tip: For Chicago and New York City installations, electrician must supply conduit, receptacles, and junction boxes for base of panel. Junction box for desk or ADA height is available from Steelcase and is required when using Privacy Wall power and communication cover plates.*

- ▶ [Page 258](#)

## Infeeds

### 6 Power infeeds

Panels with factory-installed power blocks at desk or ADA height can have a factory-installed power infeed harness to supply power from the ceiling or floor. Factory-installed infeeds extend a minimum of 12' from the panel. Specify one of the following:

- Hardwire ceiling infeed
- Modular ceiling infeed
- Hardwire floor infeed
- Modular floor infeed

*Tip: If you do not specify one of the above infeeds, a hardwire infeed, located top left in a solid panel and bottom left in a Clerestory panel, will be provided.*

When ADA- and/or desk-height power is specified, a factory-installed jumper is included to link the two locations. When ADA-, desk-, ADA- and desk-, and base-height power is specified, a factory-installed jumper is included to link ADA/desk to base.

- ▶ [Multipurpose power infeeds](#), page 254

*Tip: Infeeds are not required on panels with the Chicago or New York City power prep option.*

## Example

- One GPSS60
- 9'0" ceiling height
- 4843 Linen side 1
- 4844 Glacier side 2
- 4750 Champagne Metallic floor track
- 2+2 wiring schematic
- Power base height
- Power only side 1 ADA height
- Power and communication side 2 ADA height
- Modular ceiling infeed

Order receptacles, cover plates, and power and communication base trim separately.

# Butt-Hinged Door Frames

Tip: Glass door is available up to 9'0"H ceiling height.

Tip: For information regarding Etched and Pattern Glass Planning.  
▶ Page 96

Tip: Recommended for use with Privacy Wall only. Not for use with Glass Selections.

Tip: Door frame glass option is available on transom door frames only.

Tip: Remember to specify switch cutout option if you want a butt-hinged door frame with a switch.

Tip: Switch cutout is located in strike jamb of single door frame and not available in pair frames. Order switch separately.  
▶ Page 164

Tip: Cutout option is not available on pair door frames.

# Glass Selections All-Glass Frame Kits

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: When power option is specified, connector harness is included to join power blocks with frame kit.

Tip: Frame kits include two power blocks per kit.

Tip: Frame kits are assembled in the field. Butt joints must be glazed with glazing tape or silicone sealant to be code-compliant.

Tip: SmartTools options are available and easily ordered when using SmartTools software. If you do not have access to SmartTools software, these options can also be ordered using the normal Specials RFQ (Request For Quote) process.

# Glass Selections All-Glass Glass Kits

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: Glass kits are assembled in the field. Butt joints must be glazed with glazing tape or silicone sealant to be code-compliant.

Tip: Glass kits 72"W to 96"W have two pieces of glass. Kits 108"W to 144"W have three pieces of glass.

# Glass Selections Two Divided Lite Glass Kits

## Transom-Aligned Top Lite

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: Glass kits are assembled in the field. Butt joints must be glazed with glazing tape or silicone sealant to be code-compliant.

Tip: Glass kits 72"W to 96"W have two pieces of glass. Kits 108"W to 144"W have three pieces of glass.

Standard Includes	Required to Specify

# Glass Selections Pivot-Hinged Door Frames

Tip: Glass door is available up to 9'0"H ceiling height.

Tip: Recommended for use with Glass Selections panels only.

Tip: Glass Selections pivot-hinged door frames work with Glass Selections door leaves only.

Tip: For information regarding Etched and Pattern Glass Planning.   
▶ Page 96.

Tip: Order switch separately.

Tip: Swing orientation is available on single pivot-hinged door frame with transom only to properly orient etched and patterned glass.

**For Canadian Pricing**  
Multiply U.S. Price by the Canadian price factor.

# Glass Selections Transom-Height Pivot-Hinged Door Leaves for Use with Switch Cutout

Tip: Glass Selections pivot-hinged door leaves work with Glass Selections door frames only.

Tip: In a Glass Selections door frame with glass transom, switch wiring must run down through the floor only. Wiring cannot run up to the ceiling.

Tip: For information regarding Etched and Pattern Glass Planning.

# Glass Selections Transom-Height Polished Edge Slider Doors

► Need help? Product details, page 54

### Standard Includes

- Ceiling height from 8'0"H to 10'0"H, in one-inch increments
- Slider door: glass with polished edges
- Frame: clear anodized aluminum
- Side panel
- Door base: paint
- Floor track with adjustable levelers to accommodate continuous 5"H base trim (ordered separately)
- Slide hardware
- Door pull: satin chrome
- Door: 3/8" thick

### Required to Specify

- 1 Style number
  - 2 Ceiling height
  - 3 Glass thickness for door
  - 4 Glass number for door frame top lite (door 1)
  - 5 Glass number for slider door (door 2)
  - 6 Glass number for side panel top lite (glass 1)
  - 7 Glass number for side panel (glass 2)
  - 8 Paint color number for door base
  - 9 Post extension
  - 10 Slide orientation
  - 11 Options, if selected (see below)
- See *Surface Materials*, page 354.

*Tip: Door height is always 7'. Transom height varies depending on ceiling height.*

*Tip: Transom-height doors are standard with 3/8" thick glass. 1/2" thick glass can be selected for enhanced rigidity.*

*Tip: High-voltage switch is not available on Glass Selections slider door.*

*Tip: All locks are random keyed.*

*Tip: For information regarding Etched and Pattern Glass Planning.*

# Glass Selections Transitions

## All-Glass L-Corner Units and All-Glass L-Corner Units with Two Transom-Aligned Lites

Tip: L-corner units are factory-assembled. Glass joint is field-glazed (glazing tape or silicone sealant) as part of the installation process.

Tip: L-corner units plan dimensionally in the same manner as individual panels that are joined by a post.

Standard Includes	Required to Specify
<ul style="list-style-type: none"> <li>▶ Need help? ▶ See page 1 for details.

**Feature Strips**

*Tip: Single feature strips are 120" long and are cut to size in the field. They are required when joining door frames to other components.*

*Tip: To determine quantity and length of feature strips, see Feature Strip Application. ▶ Page 86.*

*Tip: Feature strip(s) may be shipped slightly longer than needed. Excess will be concealed behind base trim and no cutting is required.*

*Tip: Half feature strips are used in combination with in-line feature strips for inside corner applications.*

*Tip: For correct fit of feature strips, you must specify type of components that will be used in conjunction with feature strips. Example: One painted component and one upholstered component.*

## Power Track and Power Track Infeeds

Power hub

Power track infeed with ramps and wall

### Product Details

**Power track infeeds** provide the option of connecting the Thread system to the building power, either through the wall or through the floor. Infeed lengths are available from 24" to 144" in 12" increments.

**Power track lengths** are available from 24" to 144" in 12" increments. It connects to an infeed to distribute power. Power tracks can be ordered with ramps (for a more modular install and can be used with carpet or resilient flooring materials) or with infills (required for use with resilient flooring materials, such as luxury vinyl tile).

**Connectors**, four varieties: Blank (No power access), one-door low profile (provides one access point utilizing Steelcase's proprietary low profile plug), two-door low profile (provides two access points utilizing Steelcase's proprietary low profile plug), and the NEMA monument, which provides four standard three-prong plug (NEMA 5-15) receptacles.

**Power hub** is available in lounge height and desk height and with a standard three-prong plug or Steelcase's proprietary low-profile plug. The hub provides a user interface for power that is off the floor and capable of moving around the space. It features an integrated cord wrap in the design of the base.

**Low-profile plug adapter** is an 8<sup>3</sup>/<sub>4</sub>" long adapter that allows a single three-prong plug to connect to Steelcase's proprietary low-profile connectors.

**Thread power track and power track infeeds** are prefabricated modular tracks capable of distributing up to 20 amps of power and come in lengths of 24" to 144" in 12" increments. These tracks must be fastened to subfloor, but can be reconfigured or removed without leaving substantial damage to the subfloor like more permanent solutions do.

► Please refer to page 264 for more information on applications and reconfiguration.

**Proprietary low-profile plug** can only be used with the Thread system and will not interface with existing receptacles. In order to achieve ADA compliance for connectors in an egress location, we developed our own plug design.

*Note: Always consult your local inspector prior to purchasing the Thread system to ensure all local codes and ordinances are satisfied since local regulations may supersede those spelled out in the National Electric Code.*

**Connections**

12 gauge insulated wires

**The power track and power track infeeds** utilize three standard 12 gauge insulated wires encased in a riveted metal housing that stands 3<sup>1</sup>/<sub>16</sub>" off the subfloor.

**The infeed track** comes with 12' of extra wiring to easily connect to the building power through a new or existing junction box. If longer infeed wiring is necessary, it may be submitted to specials.

**Each power track and infeed track** comes with either two flexible ramps or two infills. The ramps ease the transition between the subfloor and the height of the track. These ramps simply rest on top of the track and do not need to be adhered or fastened. The infills rest within the track to create a smooth surface for the floor covering to be applied over. When ordering a power track and/or infeed track, you can specify the track and ramps or the track and infills, depending on your installation method determined by your flooring selection.

**The Thread power hub** provides six standard three-prong (NEMA 5-15) receptacles to provide power access where users need it. (indoor dry locations only).

**The power hub** is available in two heights, lounge height and desk height. The lounge height hub is 30" tall overall with the user interface starting at 22". The desk height hub is 37<sup>1</sup>/<sub>8</sub>" tall overall with the user interface starting at 28".

Standard three-prong plug

Low-profile plug

**The cord** is 5' long and is available with either a standard three-prong plug for use with standard receptacles or with Steelcase's proprietary low-profile plug for use with one-door and two-door low-profile connectors.

**The metal connector cover on the low-profile connectors** is a stamped, painted steel plate. This connector cover is ADA compliant for egress locations.

**The low-profile connector doors** are made of cast zinc. They are spring loaded and gasketed to ensure compliance with small liquid spill requirements. The system is not fully waterproof and is only acceptable for use indoors in dry locations.

**The plastic trim ring** is spring loaded to provide a tight fit against the carpet. It provides a simple ramp transition to the 1<sup>1</sup>/<sub>2</sub>" maximum height of the connector cover and hides any imperfections in the access hole cut in the carpet.

**NEMA connector** is designed to accept most standard NEMA three-prong plug and cord orientations. If cord exits in a non-standard fashion, please check for fit before ordering. A low-profile connector and adapter should be utilized for non-standard configurations.

**The NEMA monument** is made of a two piece plastic housing that provides access to four standard three-prong receptacles. This connector is not ADA compliant for egress locations.

**When planning a power network**, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

## Thread, Power Track and Power Track Infeeds, continued

**Technical Electrical Information and Power Planning**

**The Thread system** is listed as a 20 amp branch circuit. It utilizes three standard 12 gauge wires (hot, neutral, and ground). When more than one circuit is required to support a space or application, additional circuits will need to be provided using Thread power track infeeds connected to other circuits in the building. The number of circuits available to pull from will be determined by building construction. Please consult your electrician if you are unsure of the building power capabilities.

**The Thread power track infeed** begins with a universal connector that is capable of connecting to any standard 1/2" conduit or other listed product such as Wiremold or Panduit. The building electrical supply connection must be performed by a licensed electrician. Please consult with your electrician if you have questions regarding what type of conduit will be used.

**UL limits the number of outlets on a single circuit to 10**, but our connectors count differently than typical wall mounted receptacles.

- Blank covers do not count towards the number of receptacles because no access points are present.
- One-door and two-door low-profile connectors each count as a single receptacle.
- NEMA monument counts as two receptacles.
- Hub counts as zero receptacles.

**Due to voltage drop**, the National Electric Code (NEC) recommends that the distance between the building circuit box and the user access point not exceed 75–150 feet (depending on gauge of wires running from the building circuit box to the Thread infeed junction). Since the distance from the Thread infeed junction to the building circuit box may be difficult to ascertain, we recommend planning conservatively for the total distance of any individual Thread branch and keep it as short as possible. Thread branches longer than 70 feet may risk contributing to voltage drop exceeding acceptable levels.

**Listing categories:** Thread power track is listed as a multi-outlet assembly and is considered a 20 amp branch circuit, which means it meets the same requirements as the hard wire outlets in the wall. The power hub is listed as a relocatable power tap (RPT, which means it is treated the same as a typical power strip). The plug adapter is listed as an accessory to the Thread system.

**UL 5** is the standard for multi-outlet assembly (which correlates to article 380 in the National Electric Code) and UL1363 is the standard for RPT, but has no direct correlation in the NEC.

**The power hub** has a circuit breaker in the base that is intended to trip should excessive power draw occur. If the total draw from all receptacles on a hub exceed 15 amps, the breaker will trip and a black button will pop out of the base where it meets the stalk. Pressing the black button back in will reset the circuit.

**It is important to plan for expected power consumption** in a given application to ensure enough infeeds are present to prevent tripping the circuit breaker either at a hub or at the building circuit box.

**Building construction** varies and there may be components hidden below the floor surface that must be avoided when drilling holes to anchor the power track infeed and power track. Sub-flooring, including concrete, may contain electrical wiring, structural cabling, radiant heating lines, etc. To avoid potential property damage or unsafe conditions, consult with the building architect or Engineer of Record to plan accordingly.

**The building electrical supply connection** must be performed by a licensed electrician. Only connect this system to a dedicated 120-127 V~ 60Hz 20A single phase GFCI protected building power circuit.

**Codes Information**

**Thread** is UL certified as a multi-outlet assembly and not a manufactured wiring assembly. Manufactured wiring systems are defined in Article 604 of the NEC and provide very clear guidelines regarding construction methods. Thread is constructed in a manner not consistent with any defined method in this section of the NEC and because of this, cannot be considered a manufactured wiring system. It is consistent with the definition for multi-outlet assemblies as defined in Article 380.

**The system** is capable of distributing 20 amps of power. Power planning to 80% consumption means the system is not designed to deliver more than 16 amps total. Thread was not designed as a dedicated single outlet (it is a modular, multi outlet assembly), which would then not allow us to utilize a 20 amp receptacle. Thread is compatible with 5-15 plug types, not 5-20 plug types.

**The NEC does not** permit plugging an extension cord or relocatable power tap (RPT) into another extension cord or RPT. Many of the power units embedded in furniture are listed as a RPT and, per the NEC, are required to be plugged into a building hardwired receptacle. The Thread cord adapter is a listed multi outlet accessory and as such, is not considered an RPT, extension cord or a building receptacle. We recommend the NEMA monument for any Thread application where furniture-hosted power will be plugged in but some may desire to use the low profile connector with an adapter for this application. Please note that while it is not a safety hazard, a local inspector may not approve because of the definitions and restrictions mentioned above.

**Thread** is listed as a multi outlet assembly in accordance with Article 380 of the NEC; it is not a flat conductor cable system (FCC) as identified in Article 324. FCC is not permitted in education, healthcare, or residential facilities.

**The intent of this requirement within the code** is that outlets are not to be covered by carpet. The traditional multi outlet assembly design was covered with receptacles across the entire face and field wired. With that type of design, it is easy to understand it applies to the entire product. Thread is a new design, yet certified as a multi outlet assembly. The raceway is factory wired and able to be covered with carpet, but the connector/receptacle still cannot.

## Applications

### Floor Specifications

**The Thread power distribution system** is intended for indoor use/dry locations only. It is designed to be used with carpet and works best with carpet tiles, though broadloom carpet may also be used. Each connector in the system will require a hole to be cut in the carpet to permit access to the system. This is true for every connection point, even if only using a blank cover where no power access is needed. For this reason, we strongly recommend carpet tile over broadloom carpet. See installation guide for tools and direction.

**Each piece of Thread power track or power track infeed** must be fastened to the subfloor using one screw at each end of the track and one additional screw every 48". This means for power tracks that are shorter than 48" only two screws are required. For tracks 60" to 96" in length, three screws are required and for tracks longer than 96", four screws are required. Connectors require additional screws in to the subfloor. The track itself has multiple holes to allow it to be screwed down and has many more holes than are needed. For example, at the end of each track you will find four holes placed closely together but only one screw needs to be used. The extra holes are available in case of a damaged screw or some form of interference in the subfloor (like a rock in concrete) that might prevent a hole from being used. The same is true for holes all the rest of the way down the track; there are holes on both sides of the track and they are placed approximately every 12" to provide multiple options in case of interference in the subfloor. Please see installation guide for detailed instructions regarding this topic, including recommended types of fasteners and locating pilot holes.

**A power track infeed** may be installed perpendicular to a wall or at any angle between 45° and 135°. However, it should be noted that once the infeed track is installed, all subsequent track connections will be either inline or at right angles to this track. There is no ability to create an angled connection between two tracks. Please refer to the installation guide for detailed instructions and drawings.

**The Thread system** does have some flexibility to accommodate uneven floors, however flooring elevation changes greater than 1/8" must be filled in or sanded down to even out the surface. The area underneath and immediately surrounding a junction (connector of any type, including a blank) must be flat within 1/16" in a 9" radius from the center of the junction. The Thread system is not designed for use on raised floors, across building expansion joints, or in areas where it will be subject to constant or rolling loads heavier than people. Please refer to the installation guide for additional details.

**For connectors that will be in an ADA defined egress location**, in order for the low-profile connector to be considered ADA compliant, the carpet thickness (including pad) must be between 0.225" and 0.450". Carpets thicker than 0.450" will not work with the Thread system and carpets thinner than 0.225" may be used but will not be ADA compliant in egress locations.

**Floor covering materials such as tile or wood** are not compatible with the Thread system.

**The length of a track** is measured from the center of one connector to the center of another connector; a 24" power track by itself may not be precisely 24". This is intended to simplify planning and layouts.

*Note: While this system has been developed to minimize its impact on the physical environment and to work with a broad range of existing furniture, certain conditions exist that may create undesirable interactions with other products. One example is the use of sled-base chairs since it may not sit flat when interacting with the track or connectors. Chairs utilizing pneumatic cylinders with minimum clearance of less than 1/2" should be used with care as the bottom of the cylinder can catch on a connector cover or on the slightly raised profile of the track beneath the carpet. Steelcase always strives to exceed the 1/2" clearance on our seating products but if you identify a seating product that does not have this level of clearance, a spacer ring is available from our service parts that can be placed between the cylinder and the base to increase the clearance. Please see part number 895446201SR in the Service Parts catalog, or part number 895446201MP for a quantity of 10 spacers.*

**Notice Regarding Installation:** Thread must be anchored to the building floor for safe and proper use. Building construction varies and there may be components hidden below the floor surface that must be avoided when drilling holes to anchor the power track infeed and power track. Sub-flooring, including concrete, may contain electrical wiring, structural cabling, radiant heating lines, etc. To avoid potential property damage or unsafe conditions, consult with the building's architect or Engineer of Record to plan accordingly.

# Thread Power Hub

Tip: Plugtop cap finish is 6053 Seagull. Hub receptacle faceplates are 7360 Merle.

Tip: Power cord is 5' in length.

Tip: 30" high power hub's lowest user interface is 22" off the floor. 37 1/8" high power hub's lowest user interface is 28" off the floor.

Tip: Neck is 1 3/4" wide and 1/2" deep.

Tip: Head is 2" wide and 1 1/2" deep.

# Low-Profile Floor Power and Communication Overview

Architectural Power System

# Low-Profile Floor

## Architectural Solutions

**Low-Profile Floor** is a raised platform of triangular tiles on 2½"H supports. It is designed for routing wiring and cabling to access tile locations determined by the user. It can be reconfigured to support changing utility needs.

► Specifying, page 290

### Floor access boxes

provide access to power and communication routed beneath Architectural Solutions Low-Profile Floor. Modular and hardwire versions are available.

### Customer-supplied carpet tiles

cover Low-Profile Floor tiles, trim, and ramps.

**Edge trim** is cut on site to finish exposed edges. It is available in two depths—2"D and 4"D.

**Tiles** interlock with supports without screws or adhesives.

**Wall scribe trim** is cut on site to accommodate field conditions such as building walls or structural columns.

**Supports** interlock with tiles for a tight fit.

**Ramp kits** provide a gradual transition from the subfloor to Architectural Solutions Low-Profile Floor.

## Actual Dimensions

► Page 285

**Product Details**

**Supports** are 2 1/2"H. The overall height when tiles are installed is 2 9/16"H.

**Customer-supplied carpet tiles** are used to cover Architectural Solutions Low-Profile Floor tiles, trim, and ramps. Follow floor covering manufacturer's recommendations concerning floor preparation, adhesive coverage and dry time.

**Triangle tile** is the primary tile used in an Low-Profile Floor installation. Triangle tiles cannot be used against a wall. Instead use wall scribe trim or edge trim.

**Grommet triangle tile** provides pass-through of power harnesses and communication cables.

**Seismic triangle tile** provides lateral bracing of the Architectural Solutions Low-Profile Floor in areas of seismic activity as required by local building codes. The seismic triangular tile Z bracket can also be used by the electrical contractor to make electrical ground connections of the floor installation to ground. *Tip: Any requirements for ground wiring should be addressed as part of the electrical contractor's work, along with other power connections to the building source.*

**Rectangular and square tiles** are cut on site to accommodate field conditions such as structural columns. Extra supports are placed underneath the tiles to support the infill condition. Wall scribe trim can also be used for infill conditions.

**Floor box access tile** provides a factory formed opening for the Architectural Power low-profile floor box.

**Distribution tile** must be positioned over a power distribution module, transition module, zone box, and consolidation point.

**Edge trim** is cut on site to finish exposed edges.

**Corner edge trim** has closed ends to finish the exposed edge at the end of the run. Both ends are closed so corner edge trim can be used in either left- or right-hand position.

**Wall scribe trim** is cut on site for a flush, finished edge against a building wall. Wall scribe trim requires extra supports underneath.

**Transition trim** finishes angled corners. Sizes are available to accommodate depth changes between ramp edge trim and the trim on the surrounding edges.

**Ramp kit** includes ramp tiles that can be inset or out-set. A corner ramp kit is also available.

**Ramp edge trim** finishes the exposed sides of a ramp. Edge trim is included with the ramp kit.

**When positioning Privacy Wall** on Low-Profile Floor, include universal floor gridders in the wall specification. **▶ Page 20**

**Commercial handrails** are customer-supplied. Most codes will not require handrails when the low-profile floor height is less than 6 inches above the slab or the length of the ramp is less than 72 inches.

**Architectural Solutions Low-Profile Floor Performance Data (per CISCA)**

**Concentrated point load** - 32 square inches per triangular tile. 500 lb on 1 square inch.

**Deflection** 0.057"

**Permanent set** 0.002"

**Recovery** > 99%

**Ultimate point load** - 32 square inches per triangular tile. Edge - 1,291 lb on 1 square inch. Safety factor ultimate to concentrated > 2.5:1. Center - 2,399 lb on 1 square inch. Safety factor ultimate to concentrated > 4.5:1.

**Rolling load** (net weight per wheel) 500 lb (3" hard phenolic tread wheel at 10 cycles < 0.02" permanent set.) 350 lb (6" soft alathane tread wheel at 10,000 cycles < 0.02 permanent set.)

**Supports** Axial load 4,200 lb Slow buckling in failure.

**System uniform load** 320 psf < 0.02" deflection.

**Connections**

**Tiles interlock** tightly into grooves on supports. Screws and glue are not needed.

**Place tiles** in the recommended pattern for maximum stability.

8" Outset ramp

11 1/4" Outset ramp

**Ramp tiles** can be positioned on the 8" side or 11 1/4" side of the triangle tile. Connect as many ramp tiles as needed to create the ramp width needed. Individual ramp sections are manufactured at 8.3% slope (ratio of rise: run of 1:12) and designed to connect into the top of the individual supports when installed.

**Wiring & Cabling**

**Routing space** between supports is 4 3/8"W and 1 7/8"H.

**Architectural power components** are used to distribute and terminate power in Architectural Solutions Low-Profile Floor and zone cabling.

**Fire stop** creates a draft-tight enclosure and accommodates routing of wiring and cabling. Local codes may require fire stops to be installed every 100 square feet.

**Local electrical codes vary.** Consult a qualified electrical contractor or engineer for the proper installation of electrical equipment. *Tip: Any requirements for ground wiring should be addressed as part of the electrical contractor's work, along with other power connections to the building source.*

# Understanding Modular Power

  
**Statement of Line** **298**

  
**Product Details**  
Modular Power **299**

# Statement of Line

## Modular Power

### Modular components

provide branch circuit power distribution through a raised access floor or above a suspended ceiling. Eight, #10 gauge AWG conductors can be configured as 3+1, 2+2, or 3 circuits with separate neutrals.

# Modular Power

## Modular-to-Hardwire Harnesses

► Specifying, page 306

### Product Details

**Modular-to-hardwire harness** routes power from the building power source to modular components or to provide power to a customer-supplied device. It can be used either above a suspended ceiling or below a raised floor.

### Connections

**Modular connector** located on one end of the harness connects to a modular extension harness or transition harness, using a harness-to-harness connector, or to a branching connector or access box.

### Surface Materials

**Modular-to-hardwire harness** is concealed when it is properly installed.

### Actual Dimensions

Lengths 5', 10', 30', and 50'

## Modular Extension Harnesses

► Specifying, page 307

### Product Details

**Modular extension harness** routes power from three-way branching connectors or lengthens the overall harness distance by using harness-to-harness connectors.

**Modular extension harnesses** can be connected or disconnected as needed with:

- Architectural Solutions Modular Power
- Answer
- Montage
- Post and Beam

### Connections

**Modular connectors** located on each end of the modular extension harness, allow the harness to be relocated as power needs change.

**Two modular extension harnesses** can be connected together to extend the length by using a harness-to-harness connector.

### Surface Materials

**Harness** is concealed when it is properly installed.

### Actual Dimensions

**Modular extension harness**

Lengths 5', 10', 20', 30', 40', and 50'

## Modular Connector Faceplates

► Specifying, page 308

### Product Details

**Modular connection faceplate** provides a way to add a modular connection to a junction box. Faceplate available with a flush or 90° connection.

### Connections

**Faceplate** is attached to junction box with screws. Hardwire connection to power source within conventional 4" x 4" junction box is completed by electrician in the field. Modular extension harness can be connected or disconnected from faceplate as needed.

### Surface Materials

**Faceplate** is zinc-plated steel. Modular connector is black plastic for 3+1, brown plastic for 2+2, and rust plastic for 3 circuits with separate neutrals.

### Actual Dimensions

Depth 4<sup>11</sup>/<sub>16</sub>"

Width 4<sup>11</sup>/<sub>16</sub>"

Height 6"

**Zone Boxes**

► Specifying, page 309

**Product Details**

**Zone box** includes an infeed harness to allow electrical connection to a circuit breaker box. Zone box includes three modular output connection points for power distribution for 10-gauge zone boxes, and two modular output connection points for 8-gauge zone boxes.

**Connections**

**Zone boxes** have either two or three output connection points. For 4-circuit, 3+1 and 2+2 configurations, twelve circuits are distributed to provide four circuits at each of the three connection points for 10-gauge zone boxes. For 8-gauge zone boxes, 8 circuits are distributed to provide four circuits at each of the two connection points. For 3-circuit, separate neutrals or configurations, nine circuits are distributed to provide three circuits at each of the three connection points for 10-gauge zone boxes and six circuits are distributed to provide three circuits at each end of the two connection points for 8-gauge zone boxes.

**Surface Materials**

**Zone box** is concealed when it is properly installed.

**Actual Dimensions**

Depth	11"
Width	10½"
Height	17⁄8"

**Hardwired Zone Boxes**

► Specifying, page 309

**Product Details**

**Hardwired zone box** is designed to be hardwired to power source by the electrician in the field.

**Boxes** that will be wired up to 150 feet have three output connection points (maximum of 12 circuits). Boxes that will be wired 150 feet up to a maximum of 200 feet have two output connection points (maximum of 8 circuits). All connectors are pre-wired to terminal base inside the box.

**Connections**

**Connection** from terminal bars to the circuit-breaker box should be done by a qualified electrician using 10-gauge wire for 12-circuit boxes and 8-gauge wire for 8-circuit boxes.

**Boxes that have three output connectors** can be 3+1, 2+2, or 3 circuits with separate neutrals. The 3+1 and 2+2 systems have a total of 12 circuits—four circuits at each connector. The 3 circuits with separate neutrals system has a total of nine circuits—three at each connector.

**Boxes that have two output connectors** can be 3+1, 2+2, or 3 circuits with separate neutrals. The 3+1 and 2+2 systems have a total of 8 circuits—four circuits at each connector. The 3 circuits with separate neutrals system has a total of six circuits—three at each connector.

**Surface Materials**

**Hardwired zone box** is concealed when it is properly installed.

**Actual Dimensions**

Depth	11"
Width	10½"
Height	17⁄8"

**Three-Way Branching Connectors**

► Specifying, page 310

**Product Details**

**Three-way branching connector** has one power-infeed and three modular connection points for power distribution.

**Connections**

**Three-way branching connector** can route power to daisy chain power components such as floor boxes.

**Surface Materials**

**Three-way branching connector** is concealed beneath Architectural Solutions Low-Profile Floor when it is properly installed.

**Actual Dimensions**

Depth	2 <sup>5</sup> / <sub>8</sub> "
Width	1 <sup>1</sup> / <sub>2</sub> "
Height	1 <sup>3</sup> / <sub>4</sub> "

**Harness-to-Harness Connectors**

► Specifying, page 310

**Product Details**

**Harness-to-harness connector** has one power-infeed and one modular connection point for power distribution.

**Connections**

**Harness-to-harness connectors** join modular harnesses together to lengthen the overall harness distance.

**Surface Materials**

**Harness-to-harness connector** is concealed beneath the floor when it is properly installed.

**Actual Dimensions**

Depth	2 <sup>5</sup> / <sub>8</sub> "
Width	1 <sup>1</sup> / <sub>2</sub> "
Height	1"

**Transition Harnesses for Floor Power-Infeed or Base Power-In**

► Specifying, page 312

**Product Details**

**Transition harness** modularly connects the Modular Power system to Internode power kits. It also connects to Answer, Avenir, Montage, and Series 9000 in place of a standard base power-in.

**Connections**

**Modular connector** to connect to compatible system is included on one end of the transition harness.

**Surface Materials**

**Transition harness** is concealed beneath the floor when it is properly installed.

**Power transition cover**  
• Black plastic

**Actual Dimensions**

Power harness length	6'
Infeed harness length	3'

Modular Power, continued

**Ceiling Power Transition Harnesses**

► Specifying, page 316

**Product Details**

**Ceiling power transition harness** modularly connects Modular Power routed above a suspended ceiling to Kick, Avenir, and Series 9000.

**Connections**

**Modular connector** to connect to compatible system is included on one end of the ceiling power transition harness.

**Surface Materials**

**Ceiling power transition harness** is concealed when it is properly installed.

**Actual Dimensions**

Lengths 12' and 24'

**Shallow Floor Access Boxes**

**Shallow floor access box**

► Specifying, page 316

**Shallow floor access box for hardwire connection**

► Specifying, page 317

**Product Details**

**Shallow floor access box** includes a modular power block accepting two receptacles. Modular power block is available in three keying options, 3+1, 2+2, and 3-circuit, separate neutrals. Receptacle is specified separately for different lines and accommodates two modular furniture faceplates for communication outlets. A modular extension harness, ordered separately, of any length will connect to the shallow floor access box.

**Shallow floor access box for hardwire connection**

includes two duplex receptacle openings. Decora-style receptacles must be supplied in the field.

**Shallow floor access boxes** should be used with Low-Profile Floor and raised floors 2½"H or higher.

**Connections**

**Shallow access box for hardwire connection** can be used with a hardwire extension harness.

**Surface Materials**

**Shallow floor access box lid**  
• Black zinc

**Actual Dimensions**

Depth	11½"
Width	11½"
Height	2½"

**Floor Access Boxes**

**Floor access box**  
► Specifying, page 317

**Floor access box for hardwire connection**  
► Specifying, page 318

**Product Details**

**Floor access box** includes a modular power block accepting four receptacles—two on each side of the block. Modular power block is available in three keying options, 3+1, 2+2, and 3-circuit separate neutrals. Receptacle is specified separately for different lines and accommodates two NEMA single-gang outlet faceplates. A modular extension harness, ordered separately, of any length will connect to the shallow floor access box.

**Floor access box for hardwire connection** includes four duplex receptacle openings. Decora-style receptacles must be supplied in the field.

**Floor access boxes** should be used with raised floors 5"H or higher.

**Connections**

**Floor access box for hardwire connection** can be used with a hardwire extension harness.

**Surface Materials**

**Floor access box lid**  
• Black zinc

**Actual Dimensions**

Depth	11½"
Width	11½"
Height	4½"

**Modular Receptacles**

3/4"

3/8"

► Specifying, page 320

**Product Details**

**15-amp and 20-amp duplex receptacles**, ordered separately, are field installed inside floor access boxes. System ground and isolated ground receptacles are available to connect to 15-amp and 20-amp systems.

**Connections**

**Modular receptacles** snap into the power block in floor access boxes.

**Surface Materials**

**Modular receptacles**  
• Black plastic

**Actual Dimensions**

Depth	¾"	⅜"
Width	37/16"	1¾"
Height	37/16"	1¾"

# QtPro Soundmasking

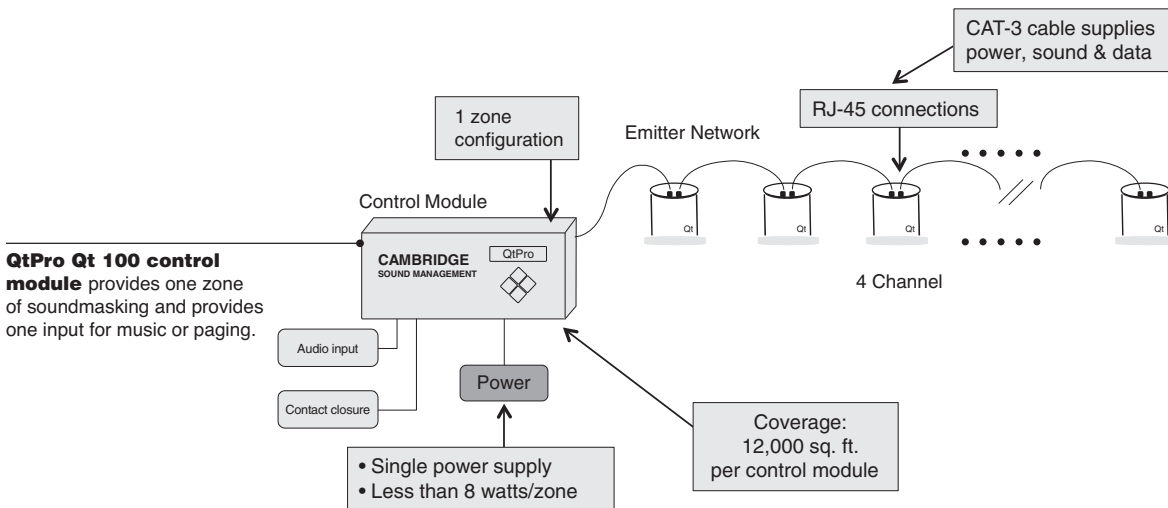

**Soundmasking** is the adding of background sound to an environment in order to make existing sounds less intelligible and less distracting. This added background sound is designed to cover up or mask unwanted conversation because it contains the same frequencies as human speech.

**Qt quiet technology** is a patented, low-voltage, direct field, distributed audio system designed for soundmasking, paging, and music distribution. Qt quiet technology overcomes significant design and installation issues with previous generations of soundmasking systems. Qt quiet technology is a technology that is flexible, uncomplicated, and cost effectively installed.

**QtPro Soundmasking** is typically installed in suspended ceiling tiles or in open plenum spaces. A network of emitters is interconnected with low-voltage cable. The entire system is operated via centrally located control modules.

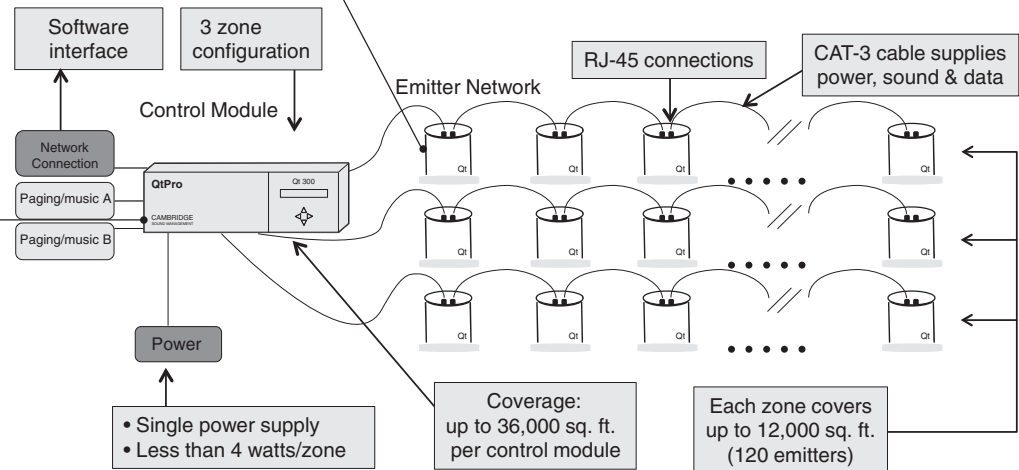

## QtPro Qt 100 Configuration

## QtPro Qt 300 Configuration

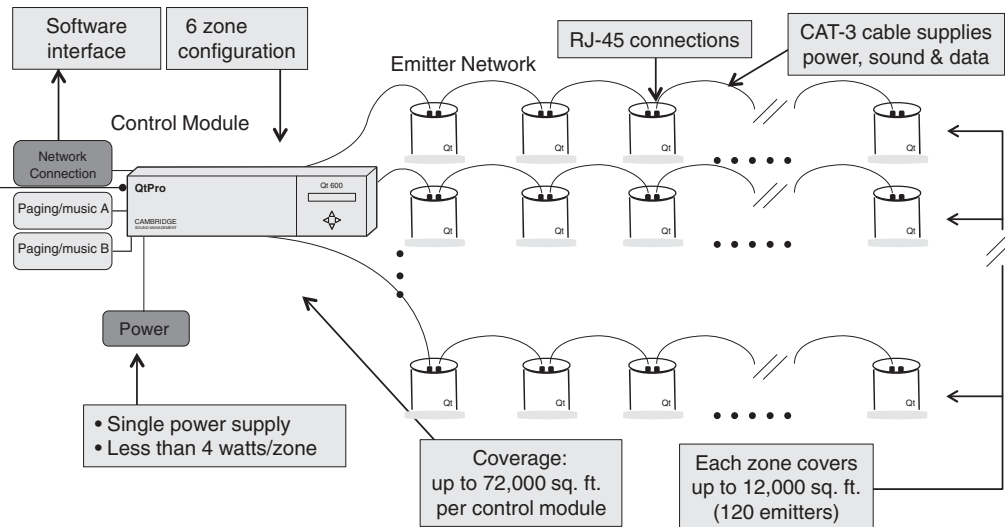

**Emitters** are direct-field miniature ceiling-mounted speakers. The emitters are driven directly from the control modules and require no external power. To compensate for different acoustic conditions within a zone, the emitters are adjustable. The soundmasking input can be reduced by up to 9dB in 3dB decrements.

**QtPro Qt 300 control module** provides three zones of soundmasking and provides two inputs for music or paging. Qt 300 and Qt 600 include pre-installed software for control and monitoring accessed via direct-PL connection or via Local Area Network.

## QtPro Qt 600 Configuration

**QtPro Qt 600 control module** provides six zones of soundmasking and provides two inputs for music or paging. Qt 600 includes pre-installed software for control and monitoring accessed via direct-PL connection or via Local Area Network.

Soundmasking

### Actual Dimensions

	Qt 100	Qt 300	Qt 600
Length	7"	11"	13 1/2"
Width	3 1/2"	3 1/2"	3 1/2"
Depth	7/8"	3 1/2"	3 1/2"

**QtPro 100** supports up to 120 emitters on one zone, covering up to 12,000 square feet.

**QtPro 300** supports up to 360 emitters on three zones, covering up to 36,000 square feet.

**QtPro 600** supports up to 720 emitters on six zones, covering up to 72,000 square feet.

## QtPro Active Emitter Configuration

**QtPro QT 300 control module** provides three zones of soundmasking and provides two inputs for music or paging. QT 600 module provides six zones of soundmasking and provides 2 inputs for music or paging. Both control modules include preinstalled software for control and monitoring access via direct\_PL connection or Local Area Network.

**Active emitter power supply** powers up to 150 active emitters; three output connectors which power 50 emitters each.

**Active emitter power injectors** supply power to up to 50 active emitters each; two output ports that can power 25 active emitters each.

- Power Cable 14/2 AWG
- - - Signal Cable CAT 3 UTP
- · - Powered Signal Cable CAT 3 UTP

**Active emitters** are direct-field miniature ceiling-mounted speakers. The active emitters are driven directly from the control modules and require no external power. To compensate for different acoustic conditions within a zone, the active emitters are adjustable. The soundmasking input can be reduced by up to 4.5dB in 1.5dB decrements.

## Product Details

**Qt quiet technology systems** project sound directly into the workspace. The emitters disperse a uniform, pre-programmed sound that requires no tuning.

**QtPro soundmasking** system can be controlled both at the control module and also by a connected computer by using the pre-installed software. The software allows remote control of time-of-date ramping, equalizer functions for acoustic professional, email notifications of problems, and day/night customization.

**QtPro soundmasking** can be applied in many environments, including open plan workstations, private offices, reception and lobby areas, cafes and break rooms, banks, waiting areas, doctors', dentists' and other practitioners' offices, and in libraries.

**QtPro soundmasking** is designed to cover normal human voice, light office sounds such as keyboard and paper shuffling, some echoes in reverberant space, and light traffic noise.

**QtPro active emitter applications include** spaces where lower frequencies, paging, or music with sound masking is desired.

**Emitters** have an adjustable sleeve that captures the emitter in the ceiling tile from 1/2" to 1 1/2". Additional components are available for mounting emitters external to the ceiling, to rafters, or into drywall.

## Connections

**QtPro control modules** typically mount onto walls or inside utility closets. Screws and drywall sleeves included. The Qt 300 and Qt 600 control modules can mount in equipment racks with the use of the rack mount bracket.

**Emitters** generally are mounted in acoustical ceiling tiles. A holesaw (provided with each control module) is used to create the opening for the emitters.

**Emitters** can also be mounted in drywall ceilings by using the drywall mounting bracket.

**For ceilings with beams or open plenum spaces**, external mounting brackets or external mounting clamps can be used.

## Wiring & Cabling

**QtPro emitters** are plug and play ready with pre-terminated, industry standard RJ 45 connectors.

**Active emitters** are 17dB louder than standard emitters and are ideal for paging and music.

**Emitters** are adjustable. With standard emitters, soundmasking input can be reduced up to 9dB in 3dB decrements and with active emitters soundmasking input can be reduced up to 4.5dB in 1.5dB decrements lower than what the volume is set from the control module.

**Emitters** are available with 16' or 30' cables. 30' cables are typically used for open-plenum installations.

**Emitters** are daisy-chained together using input and output jacks and Cat 3 cables. The chains of emitters then route back to zone panels within the control module.

QtPro Soundmasking, continued

**Standard cables** are available in lengths of 10, 16, 25, 50, 75, and 100 feet. Active emitter home run cable is available in a length of 400 feet. Custom lengths can be created onsite with cable couplers, two way splitters, and four way splitters.

**Couplers and splitters** are used to create custom cable lengths and also join together different sections of soundmasking zones.

**Surface Materials**

**Emitters** are off-white plastic while mounting components are white. Couplers and splitters are grey plastic.

**Control modules** are dark grey.

**Application Topics**

**QtPro control modules** should be placed in a location with access to standard AC outlets and routing for zone cabling.

**A Qt 100 control module** has a capacity of 120 emitters.

**A Qt 300 control module** has a capacity of 360 emitters.

**A Qt 600 control module** has a capacity of 720 emitters.

**Emitters** are planned generally one emitter per each 10' x 10' space. In private offices, balanced soundmasking is achieved with two emitters placed per 120 square feet.

**For non-acoustical tile ceilings**, additional mounting components may be required.

**Technical Specifications**

**QtPro Qt 100 power consumption:** 7 watts per unit.

**QtPro Qt 300 power consumption:** 15 watts per unit.

**QtPro Qt 600 power consumption:** 27 watts per unit.

**QtPro Qt 100** is a modular 100-240 VAC 50/60Hz - 0.6A input, 24.0 VDC 1.0A output CE/ETL/UL/GS/FCC/TUV - rated unit (included).

**QtPro Qt 300 and Qt 600 power supply** is a modular 100-240 VAC 50/60Hz - 0.9A input, 24.0 VDC 1.5A output CE/UL/CUL - rated unit (included).

**QtPro page input impedance:** 10K ohms, differential input.

**QtPro music input impedance:** 10K ohms, single ended. Two inputs mixed to mono.

**QtPro digital compression and limiting:** performed via DSP.

**QtPro frequency response (paging and music):** band pass limited from 315 Hz to 25k Hz (+/- 1.5 dB).

# Sonet Individual Soundmasking

**Soundmasking** is the adding of background sound to an environment in order to make existing sounds less intelligible and less distracting. This added background sound is designed to cover up or mask unwanted conversation because it contains the same frequencies as human speech.

**Qt quiet technology** is a patented, low-voltage, direct field, distributed audio system designed for soundmasking, paging, and music distribution. Qt quiet technology overcomes significant design and installation issues with previous generations of soundmasking systems. Qt quiet technology is a technology that is flexible, uncomplicated, and cost effectively installed.

**Sonet individual soundmasking** is an individual speech privacy system based on Qt quiet technology, consisting of two emitters (can be expanded to four) and a volume control that is plugged into any wall outlet.

**Sonet individual soundmasking system**

## Actual Dimensions

	Emitters	Volume Control
Length	5"	3 <sup>2</sup> / <sub>3</sub> "
Width	3"	6 <sup>1</sup> / <sub>3</sub> "
Depth	1 <sup>1</sup> / <sub>2</sub> "	1 <sup>1</sup> / <sub>2</sub> "

### Product Details

**Sonet** is a cost-effective solution for spot treatment of situations where one individual is being distracted by voices or other noise around them.

**Sonet** installs in an individual workstation and gives the user control over the placement and level of their soundmasking.

### Connections

Soft wall mount

Hard wall mount

### The Sonet emitters and volume control

mount to the walls or panels in a workstation. A mounting plate is included for soft walls and Velcro pulls are included for hard walls.

**The Sonet volume control** should be placed wherever there is access to an electrical outlet.

### Wiring and Cabling

**The Sonet emitters** are connected to the volume control with pre-terminated modular telephone cords (included).

### Surface Materials

**The Sonet emitters and volume control** are light gray plastic.

### Application Topics

**Sonet** is designed for individual use and is meant for applications no larger than 400 square feet. The two speakers that come standard will provide coverage for 200 square feet. To cover 400 square feet, the two speaker extension kit must be ordered. For larger spaces, QtPro is recommended.

### Technical Specifications

**Sonet power consumption:** 4 watts

**Sonet radiated acoustic power:** 0.001 acoustic watts.

**Sonet power supply** is 110v 50-60Hz. AC.

# QtPro Room Control

## Product Details

**Room control** allows users to adjust the sound masking level for an individual room or a space with two to eight emitters.

## Connections

**Room control unit** is wall mounted. It fits in most standard electrical boxes and includes open back low voltage brackets. The unit supports 1-gang low voltage class two backless brackets or standard 1-gang electrical boxes. Install using RJ-45 connectors. There are no requirements for grounding since it is done over the CAT cables.

## Wiring and Cabling

**Room control** can be its own run from the controller or part of a run to other areas.

**Wiring:** CAT 3, 5, 6 cables.

**When using the room control,** the controller needs to supply enough power over the cable run for the emitters and the room control(s). From the control modules, a single cable run can support 60 emitters; however, an added room control reduces the number of emitters that can be supported, because each room control counts as an emitter in the total for the run. The cable run can support up to a combination of 60 emitters and room control(s).

## Surface Materials

**Room control units** are white.

## Application Topics

**Room control** can be used to adjust the sound masking level for an individual room or a space with two to eight emitters. Since the Qt room control is designed for a room of up to eight emitters, a separate zone should be used in larger areas. The room control controlled room can be its own run from the controller or part of a run to other areas.

**Room control** is designed to work with any QtPro Soundmasking systems. It can be added to an existing QtPro Soundmasking installation.

**The unit** features a six position switch that adjusts the sound masking volume nominally in 2.5 dBA decrements.

---

 **For Canadian Pricing**  
 Multiply U.S. Price by the Canadian price factor.  
 ▶ See page 1 for details.

# Emitters

*Tip: Emitters are used to project soundmasking, paging, and music.*

*Tip: Each emitter includes a 16' or 30' cable used to daisy chain to adjacent emitters.*

*Tip: Emitters with 16' cables will be used for most standard installations.*

*Tip: Emitters with 30' cables will be used for open-plenum installations to allow for appropriate visual management of cables.*

# QtPro Room Control

*Tip: The QtPro room control can be used to adjust the sound masking level for an individual room or a space with two to eight emitters. A separate zone should be used in larger areas.*

*Tip: The length of the power cord on the Qt 100, Qt 300, and Qt 600 is 6'.*

# Privacy Package

*Tip: Privacy signs can be mounted on glass, surface-mounted with self-adhesive tape, or mounted using 1-gang electrical box.*

*Tip: Control module can be mounted to wall or flush-mounted with supplied box on suitable 4-gang electrical box.*

*Tip: Privacy package comes standard with one control module and two lighted privacy signs.*

Standard Includes	Required to Specify
-------------------	---------------------

- One wall mounted control module
- One 4-gang adaptor plate for control module
- Two automatically lighted privacy signs
- Two privacy sign adaptor plates
- Two 50' plenum rated cables for privacy sign
- One power supply
- Eight QT emitters
- Seven 16' audio cables
- One 50' home run audio cable
- One hole saw

# Active Emitter

*Tip: Active emitters are used to project soundmasking, paging, and music.*

*Tip: Each active emitter includes a 16' or 30' cable used to daisy chain to adjacent emitters.*

*Tip: Active emitters with 16' cables will be used for most standard installations.*

*Tip: Active emitters with 30' cables will be used for open-plenum installations to allow for appropriate visual management of cables.*

*Tip: Active emitters are compatible with the QT300 and QT600 control modules.*

*Tip: Active emitters require proper quantities of injectors and power supplies compliant with the application and specification instructions.*

*Tip: Active emitters' volume can be adjusted by 4.5 dB on 1.5 dB decrements from the overall system volume level.*

*Tip: Active emitters' are 17 dB louder than standard emitters.*

Standard Includes	Required to Specify
<ul style="list-style-type: none"> <li>▶ Need help? # Surface Materials

<b>Surface Materials</b>	<b>354</b>
<b>Availability Matrices</b>	<b>358</b>

# Surface Materials

**This listing** includes all the surface material choices that are available for the products in this specification guide.

*Tip: See Availability Matrices on page 358 for exact surface material availability on each Privacy Wall component.*

## Resources

For more information about surface materials, refer to the following resources:

**Additional surface materials specification tools** are available to assist you in the specification process—the Surface Materials Binders.

**The global surface materials palette** is a core collection of finishes that is available across multiple geographies (Americas/EMEA – Europe, Middle East, and Africa/APAC – Asia Pacific) and on global product lines, where applicable. For a list of finishes included in the offering, see the *Surface Materials Reference Manual*. Additional details, like product approvals by geography and finish number conversions, can also be found in the *Surface Materials Reference Manual* or see [steelcase.com/surface-materials](http://steelcase.com/surface-materials).

## Surface Materials Binders

- Surface Materials Reference Manual
- A complete set of swatch cards for hard surfaces, vertical surface fabrics, and seating upholstery

## Architectural Solutions Binder

- Brochures
- Swatch cards

## Paint

### Steelcase Surfaces

Applies to:

- Privacy Wall solid swing door

### Price Group 1

#### Architectural Paint

- 4843 Linen
- 4844 Glacier
- 4849 Vapor

#### Smooth Paint

- 4242 Milk
- 4858 Seagull
- 4859 Silk

Applies to:

- Privacy Wall panel surface
- Privacy Wall panel frame
- Privacy Wall glass swing door
- Privacy Wall glass door frame
- Privacy Wall slider door
- Privacy Wall door frame
- Privacy Wall ceiling track
- Privacy Wall base trim
- Privacy Wall post, wall channel, adapter, and mini end
- Privacy Wall feature strips
- Privacy Wall furniture reveal strips
- Clerestory Panel surface

### Price Group 1

#### Architectural Paint

- 4843 Linen
- 4844 Glacier
- 4849 Vapor

#### Smooth Paint

- 4242 Milk
- 4858 Seagull
- 4859 Silk

#### Textured Paint

- 7207 Black
- 7225 Sand
- 7236 Fog **E**
- 7237 Slate **E**
- 7238 Fieldstone
- 7239 Midnight
- 7241 Arctic White
- 7243 Seagull
- 7278 Dark Bronze
- 7360 Merle

## Price Group 2

### Smooth Metallic Paint

- 4743 Mineral Metallic
- 4744 Pearl Metallic
- 4750 Champagne Metallic
- 4752 Steel Metallic **E**
- 4788 Gold Dust Metallic **E**
- 4798 Sterling Metallic
- 4799 Platinum Metallic
- 4803 Near Black Metallic

### Textured Metallic Paint

- 7245 Carbon Metallic
- 7246 Midnight Metallic

*Tip: Metallic paint is not available on solid and Clerestory panels larger than 36"W.*

*Tip: Textured and metallic paint is difficult to field repair and replicate original finish on large solid and Clerestory panel surfaces.*

## Select Surfaces

### Price Group 3

#### Accent paint

Accent paints allow you to choose from a pre-matched color palette of trend driven colors that are available without the PerfectMatch registration fee. Refer to the *Surface Materials Reference Manual* for more information about this program.

## Custom Surfaces

### Price Group 3

#### PerfectMatch

PerfectMatch is a service that allows you to create your own paint color. Refer to the *Surface Materials Reference Manual* for more information about this program.

## Wood

Applies to:

- Privacy Wall door

Steelcase carefully selects veneer and solid wood for consistent color and grain structure. Wood is a natural material and variations will occur in color, grain and texture. These variations are part of the inherent natural beauty of wood and are not considered defects.

All wood products will darken with age and exposure to ultra-violet light. This is especially apparent with cherry and maple veneer. We recommend that desk accessories be rearranged periodically to ensure even aging of wood surfaces.

When storing your wood furniture, please follow the following guidelines:

- Do not store products in trailers
- Store products in areas that simulate office temperatures (60°F to 90°F)
- Store products in areas that maintain constant, office-like humidity levels
- Keep product away from light. Cover products to make sure they are not exposed to light.

## Steelcase Surfaces

### Veneer

Veneers are matched for proper balance and consistency. Veneers are available flat cut or quarter cut, except for Oak, which is rift cut. Refer to the *Surface Materials Reference Manual* for descriptions of each cut.

**Open-pore finish** is a medium gloss finish that leaves the wood grain texture visible to the eye and distinguishable to the touch.

### Flat-cut open-pore finish choices

- 3062 FC/OP Graphite Walnut
- 3402 FC/OP Clear Cherry (Aged)
- 3412 FC/OP Natural Cherry **E**
- 3422 FC/OP Medium Cherry
- 3522 FC/OP Clear Maple\*
- 3572 FC/OP Amber on Maple **E**
- 3592 FC/OP Blonde on Maple
- 3702 FC/OP Clear Walnut
- 3712 FC/OP Natural Walnut
- 3722 FC/OP Dark Mahogany on Walnut
- 3752 FC/OP Medium Walnut
- 3762 FC/OP Dark Walnut
- 3772 FC/OP Medium Mahogany on Walnut

### Quarter-cut open-pore finish choices

- 3222 QC/OP Clear Maple\*
- 3272 QC/OP Amber on Maple **E**
- 3292 QC/OP Blonde on Maple

### Rift-cut open-pore finish choices

- 3602 RC/OP Desert Oak
- 3612 RC/OP Warm Oak **E**
- 3692 RC/OP Espresso Oak

*\*To ensure an understanding of the color ranges and characteristic variations of natural veneer, a sign-off sheet is required prior to orders being accepted for this clear-coat finish. The sign-off sheet is available through Steelcase advertising stock. Form number 05-0001370.*

**E** = Established

## Select Surfaces

For information on products within Select Surfaces, including accent paints and fabrics from Designtex, Gabriel, Kvadrat, and Pollack, please refer to the *Surface Materials Reference Manual* or visit [steelcase.com/surface-materials](http://steelcase.com/surface-materials) under the Select Surfaces section.

### Natural Veneer

Natural veneer is available in the Select Surfaces offering. Natural veneer may have extended leadtimes. Place your order as you normally would for any other finish, calling out the appropriate finish code. Natural veneers are Graded-In as Wood Group 1 pricing.

The following finishes are available through the natural veneer offering:

### Flat-cut open-pore finish choices

35A2 FC/OP Blanch Maple  
37A2 FC/OP Thunder Walnut

### Quarter-cut open-pore finish choices

32A2 QC/OP Blanch Maple  
33A2 QC/OP Thunder Walnut

### Rift-cut open-pore finish choices

36A2 RC/OP Volcanic Oak

### Planked Veneer

Planked veneer is available in the Select Surfaces offering. Planked veneer may have extended leadtimes. Place your order as you normally would for any other finish, calling out the appropriate finish code.

The following finishes are available through the planked veneer offering:

### Wood Group 1

3P61 OP Planked Oak  
3P71 OP Planked Walnut

*Tip: Known for its uniqueness, planked veneer has intentional and natural variations that include, but are not limited to: character marks, grain pattern, color, and natural color aging.*

Ⓔ = Established

## Custom Surfaces

**Customiz stain** is a service that allows you to create your own stain colors and finishes on standard veneer. Customiz stain color is available on all product lines that offer wood veneer.

A \$500 stain-matching fee applies on CUSTOMIZ requests (Exception: The \$500 fee does not apply on matches to Coalesse standard finishes or for a low-gloss finish request on a standard color). The \$500 fee covers the cost of formulating the Customiz color finish and applies regardless of whether or not an order for product is placed.

In addition, an approval form must be signed to indicate customer acceptance of Customiz match. A \$1,500 initiation fee will be charged prior to first order entry. This initiation fee activates the finish for unlimited use on any Steelcase product for an 18 month time period. After the 18 month time period has lapsed, the Customiz finish may be reactivated for another 18 months for a \$1,000 fee at any point within five years after the \$1,500 initiation fee was paid. If the finish is not reactivated within five years after the \$1,500 initiation fee was paid, the finish will be culled and the customer will need to pay the \$1,500 initiation fee again. All style number related Customiz charges products are no cost as of April 2014. The matching and initiation fees are not discountable.

Customiz stain takes 10 days to formulate. Consult the *Surface Materials Reference Manual* for more information. Custom veneers are also available and must be quoted by Steelcase specials group. Customiz stain on custom veneers takes 2 to 4 weeks to formulate.

Requirements and information on ordering a Customiz stain color are found in the *Surface Materials Reference Manual*.

## Plastic

### Steelcase Surfaces

Applies to:

<b>How to Calculate Power Needs</b>	<b>366</b>
<b>Style Number Index</b>	<b>368</b>

# Wiring Schematics

Details for the Electrician

**Modular power components** are offered in three different wiring schematics to allow you to match your specific wiring strategy to any typical building wiring plan.

*Tip: All the components in an electrical system must use the same wiring schematic. The components are color coded and keyed to make it impossible to connect mismatched parts.*

Black = Four-circuit, 3+1

Brown = Four-circuit, 2+2

Rust = Three-circuit, separate neutrals

Shared neutral conductors = 10 gauge

Separate neutral conductors = 10 gauge

Hot conductors = 10 gauge

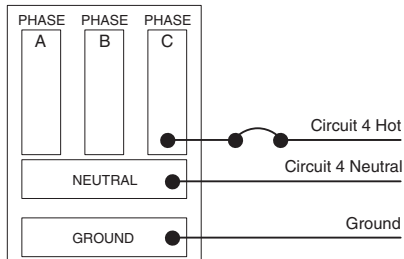

Grounding conductors = 10 gauge

## Four-Circuit, 3+1

Circuit Panel 1

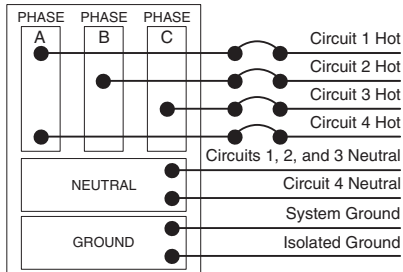

Circuit Panel 2

**In the four-circuit 3+1 schematic,** circuits 1, 2, and 3 are distributed from the first circuit panel and are supported with one shared neutral and one shared ground. Circuit 4 is distributed from a second circuit panel and is supported with a separate neutral and ground.

Single 3-Phase  
Circuit Panel

**On a single 3-phase circuit panel,** all four circuits are distributed as shown.

## Four-Circuit, 2+2

Circuit Panel 1

Circuit Panel 2

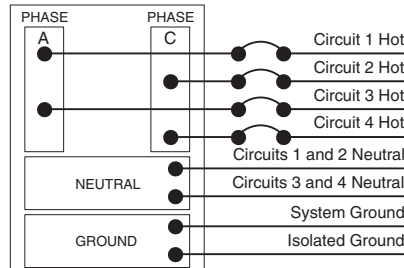

**In the four-circuit 2+2 schematic,** circuits 1 and 2 are distributed from two different phases from the first circuit panel and are supported with one shared neutral and one shared ground. Circuits 3 and 4 are distributed from a second circuit panel and supported by their own shared neutral and ground.

Single 3-Phase  
Circuit Panel

**On a single 3-phase circuit panel,** all four circuits are distributed as shown.

Split-Phase  
Circuit Panel

**On a split-phase circuit panel,** all four circuits are distributed as shown.

## Three-Circuit, Separate Neutrals

Circuit Panel 1

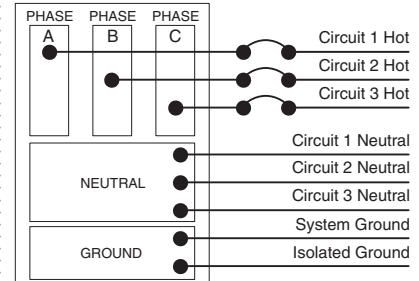

Circuit Panel 2

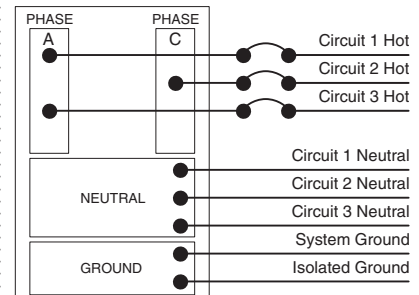

**In the three-circuit, separate neutral schematic,** circuits 1 and 2 are distributed from two different phases from the first circuit panel. Each circuit is supported with its own neutral and a common ground. Circuit 3 is distributed from the second circuit panel and is supported by its own neutral and ground.

Single 3-Phase  
Circuit Panel

**On a single 3-phase circuit panel,** three circuits are distributed as shown.

Split-Phase  
Circuit Panel

**On a split-phase circuit panel,** three circuits are distributed as shown.

# Locations with Special Requirements

## Local electrical codes

**vary.** Consult a qualified electrical contractor or engineer for the proper installation of all electrical components. Here are the special conditions for the cities of Chicago, New York, Los Angeles, and San Francisco.

### Chicago

**Chicago electrical code** requires the power distribution network to be hardwired on site. There are no hardwired versions of Internode or Modular Power.

**Architectural Solutions Low-Profile Floor can accommodate hardwiring** using the standard conduit, wires, junction boxes, and receptacles that electrician's routinely use.

### New York City

**Privacy Wall modular power components, Architectural Solutions modular power, and Internode modular components** are not approved for use in NYC.

### Los Angeles

**All modular power components** are acceptable for use in Los Angeles. Cord-connected power connections are not acceptable. Wire and cable managers are not approved for use in Los Angeles.

### San Francisco

**Internode components** are not approved for use in the city of San Francisco.

**Architectural Solutions Low-Profile Floor can accommodate hardwiring** using the standard conduit, wires, junction boxes, and receptacles that electrician's routinely use.

# How to Calculate Power Needs

Use This to Determine How Many Power-Ins You'll Need

**When planning a power network,** you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

**If your usage is not known in advance:**

The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in and 40 receptacles for each 4-circuit power-in.

**If your usage is known in advance:**

Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60 amps (20 amps times 3 circuits) or 80 amps (20 amps times 4 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.

▶ See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

**Approximate power consumption for common devices**

• Device	• Wattage	• Amperage	• Voltage	• Number of Devices Supported on Single 20 Amp Circuit*
Laptop	90	0.8	110	20
CPU/Desktop Computer	120	1.1	110	15
Monitor	60	0.5	110	29
Phone	5	0.0	110	352
High Power Tablet (e.g. Surface Pro)	40	0.4	110	44
Low Power Tablet (e.g. iPad Air)	15	0.1	110	117
Desktop Printer	40	0.4	110	44
42" LCD Screen	210	1.9	110	8
DVD Player	25	0.2	110	70
Projector	175	1.6	110	10
Desktop Lamp	19	0.2	110	93
Large Printer/Copier (high)	1900	17.3	110	1
Large Printer/Copier (low)	850	7.7	110	2
Paper Shredder	360	3.3	110	5
Desktop Fan	20	0.2	110	88
Standing Fan	180	1.6	110	10
Coffee Maker (high)	1200	10.9	110	1
Coffee Maker (low)	600	5.5	110	3
Microwave (high)	400	13.6	110	1
Microwave (low)	150	5.5	110	3
Refrigerator (high)	1500	3.6	110	4
Refrigerator (low)	200	1.4	110	12
Vacuum (high)	1500	13.6	110	1
Vacuum (low)	200	1.8	110	9
Space Heater (high)	1500	13.6	110	1
Space Heater (low)	750	6.8	110	2

*Tip: These calculations are estimations and are meant solely for informational purposes. It is important to conduct proper power planning for each installation to prevent overloading a circuit.*
