

Sandstone - Wallcovering

Care 19

MAINTENANCE INSTRUCTIONS

Cleaning Code S: Clean only with a water free cleaning solvent. Do not saturate. Do not use water.
(Damp cloth can be used)

- Quickly blot out fresh spills with a white absorbent cloth.
- Spot using a mild pure water-free cleaning solvent or dry cleaning product.
- This product contains an "Easy clean" finish which allows for the use of a damp cloth to wipe gently. Aggressive scrubbing can damage the surface, so great care should be used when wiping.
- Do Not Over Wet.
- Pre-test the cleaner in a less visible area before using, and be sure to not over- saturate surface. Blot out the excess solution with dry, clean cloth.
- Allow the area to dry completely
- If the stain persists, rub lightly in a circular motion using a clean part of the cloth. Reverse the circular motion using a clean part of the cloth each time.
- Consult with a professional cleaning service for more difficult stains or when overall cleaning is needed
