Systems

2007/2008

USG is a leading manufacturer of building materials for the construction and remodeling industries. From major commercial development and renovation to residential housing, our products turn vision into reality everywhere people live and work.

Since our founding in 1902, USG has produced products and systems to help architects and builders create environments that make our lives comfortable, safe and productive. Steadfast commitment to our core beliefs – safety, integrity, innovation, quality and service – has helped us become one of the world’s top producers of ceiling systems, gypsum wallboard and related construction products.

Realize Your Vision

Beautiful, Lasting and Sustainable Environments

Design with Confidence

With over a century of service to the building industry, USG understands the issues you manage every day and the opportunities you see in the big picture. To help all customers—from architects, designers and specifiers to builders, contractors and installers—achieve their goals, we design our high-performance products to bring creative concepts to life and assure quality for the long term.

Choose Trustworthy Products

As the recognized innovator in ceilings and manufacturer of an extensive line of acoustical panels, specialty systems and suspension systems for drywall, USG is a leading ceilings supplier in North America. Our ceilings products are known and trusted because of our exacting performance standards.

Build Sustainably

With a firm belief that health, safety and environmental well-being are compatible with economic prosperity, USG maintains a longstanding commitment with our employees, customers and communities to reduce environmental impact, use recycled materials whenever feasible and eliminate manufacturing waste.

We are a founding member of the U.S. Green Building Council (USGBC), a diverse coalition of principals in the building industry. Promoting environmentally responsible design and construction, the council developed the LEED® (Leadership in Energy and Environmental Design) program to establish a rating system that defines “green building.”

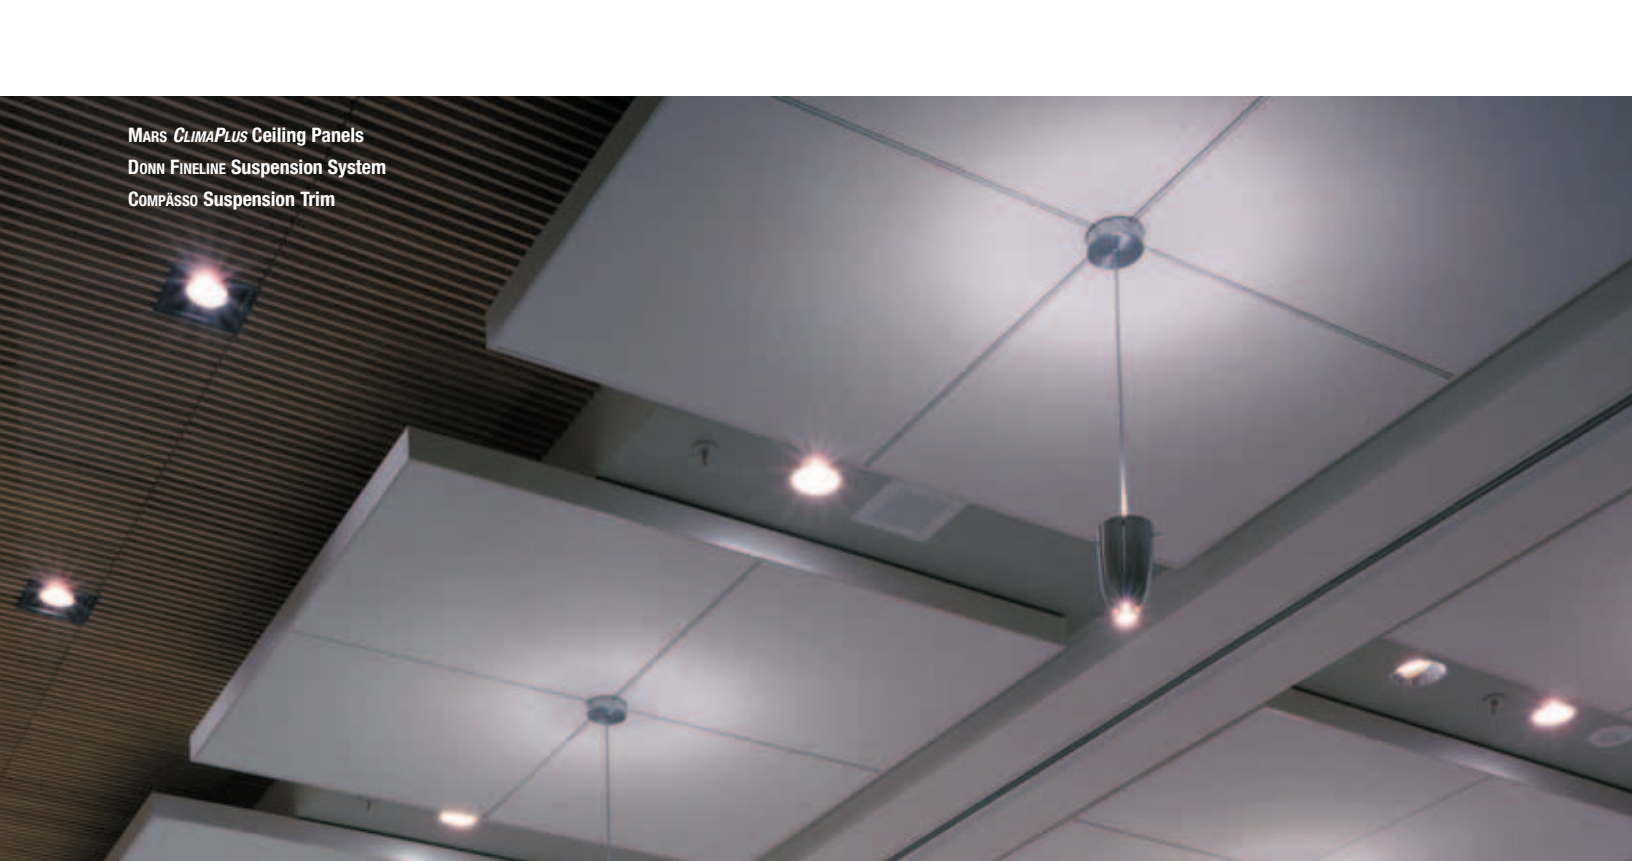

USG is committed not only to producing the highest-quality ceiling systems for creating inspired designs, but also to protecting and nurturing the environment we all share. Together, we can build a better world.

Contents

This handy desktop reference is an easy-to-use guide to the comprehensive selection of ceiling systems from USG. Inside, you'll discover clear, practical information on critical factors of ceiling design to help make the selection process enlightening and engaging.

Here's where to find the information you need to specify a USG ceiling system that looks as great as it performs.

	Pages	
Ceilings Overview	5–8	Imagine what you can achieve with our full range of products including high-quality acoustical ceilings, specialty ceiling systems that make a bold statement and the precision USG drywall suspension system.
Design Considerations	9–23	Find out more about the basics of good ceiling design and how to satisfy even the most stringent requirements in critical areas such as aesthetics, sustainability, acoustical control, abuse resistance, humidity resistance and fire resistance.
Specialty Ceiling Systems	25–81	Product-line overview, selectors for metal finishes and perforations, and detailed information for each specialty system.
Acoustical Ceiling Panels	83–173	Selectors for texture, light reflectance, colors, substrates, acoustical performance, patterns, sustainability, installed cost, edge detail options, ceiling perimeters, and detailed information for each ceiling panel.
DONN Brand Suspension Systems	175–211	Detailed information for each suspension system including the USG drywall suspension system, and information on all system accessories.
Technical Information	213–246	Environmental statement, item number index, packaging information, guide specifications, sound test data, Lencore Acoustics sound masking, standard seismic applications, fire-rated assemblies, and warranties and limitations.

Reach Higher with a USG Ceiling

From a simple white plane to a multidimensional domain energized with shape, texture and color, a USG ceiling provides the crowning touch that connects and completes the diverse elements of a space. Consider some of the great styles, materials and systems we offer to help you take your design to new heights.

Drywall Suspension System
for Curved Ceilings

Design Considerations

The optimal ceiling choice satisfies several critical requirements including aesthetics, acoustical performance, fire protection, sustainability and value. USG manufactures a wide variety of quality ceiling systems with strong capabilities in a range of performance categories. Take a closer look at the criteria to consider when specifying a ceiling system and the many USG products available to create a design that performs as well as it looks.

Sustainable Design

Aesthetic Performance

Because it is one of the most visible architectural features in a space, the ceiling plays a critical role in the overall aesthetic of any project. As the leading supplier of ceilings, USG understands that this fundamental design element must be able to support diverse designs and functional objectives.

We manufacture systems in a range of styles, textures and materials, and we offer the industry's most innovative collection of specialty and accent ceilings to faithfully bring alive your most imaginative concepts. Take a look at what you can create with USG ceilings.

Energy

Synthesize taut ceilings (walls, too!) with crisp lines, cadent planes and undulating surfaces.

Sustainable Design

Sustainable design seeks to create structures that require fewer natural resources to build, maintain and adapt to future uses. Key strategies include choosing quality, lasting materials and creating flexible, multi-functional spaces.

Consumers have become increasingly aware of the need to conserve energy, manage raw materials, reduce waste and safeguard against pollutants. In response, many developers and owners now demand buildings that will help save energy, preserve the integrity of surrounding land and assure a clean, healthy indoor environment.

Sustainable Solutions

USG has long supported sustainable building by emphasizing innovation, from the ingredients and resources we use to the manufacturing processes we employ. To help tell this story we are pleased to introduce *sustainableceilings.com*, a microsite that includes news articles, current events and interviews, as well as details about the many sustainable qualities of USG ceiling panels.

Take a closer look at the advantages that let you choose USG ceiling products with confidence.

Recycled and Renewable Materials

Recycled and renewable raw materials reduce consumption of energy and resources without diminishing the long-term performance of our products. Many USG ceiling products contain:

Synthetic mineral wool. We convert nearly 150,000 tons of slag, a waste product of steel making, to mineral wool every year, eliminating the need to mine and process raw materials and reducing landfill waste.

Recycled paper. Many of our ceiling panels contain paper recovered from both pre-consumer (cuttings from corrugated box manufacturing) and post-consumer (newspapers) use.

Corn and wheat starch binders. These renewable agricultural materials are an environmentally sound alternative to traditional binders derived from petroleum-based chemicals.

Recycled metal. Several of our metal specialty ceilings and ceiling and drywall suspension systems are made of steel and aluminum that includes recycled content. Aluminum offers additional benefits in that it can be fully re-purposed by re-melting and salvaging the metal.

For more information about recycled content in USG ceiling products, see the Sustainability selector on pages 101-102.

Sustainable Design

Responsible Manufacturing

Careful production methods are good for the environment and increase efficiency. Our practices include:

Using clean fuels. We use natural gas and low-sulfur oil whenever possible and conserve energy with heat-exchange processes throughout manufacturing operations.

Treating and recycling water. Managing water use saves more than 28 million gallons every day and reduces effluent discharges into municipal treatment systems.

Reducing waste. Waste from the production line and panels chipped or broken during processing are returned to the manufacturing cycle, keeping them out of landfills.

Offering specialized ceiling panels. Non-directional products such as RADAR™ ceiling panels allow more efficient use of material by reducing waste during installation.

High-durability acoustical panels extend the useful life of ceilings and reduce operating and replacement costs.

Panels with high light reflectance can enhance indirect lighting, reducing the number of light fixtures needed and lowering energy consumption.

For more information about the light reflectance of USG ceiling panels, see pages 88–89.

Recycling Old Ceiling Panels. USG can take back approved ceiling panels and recycle them into new building products. Reclaiming this waste can help meet the needs of a growing world and preserve natural resources.

To learn more about our recycling program for acoustical ceilings, see page 100.

Product Life Cycle. USG's commitment to health, safety and environmental responsibility is evident at every stage in the life cycle chain.

Antimicrobial Protection

Mold has become a significant concern due to today's tighter fabrication and fast-track scheduling, which can allow high levels of moisture to become trapped in a structure during construction or accumulate after occupancy. Architects, designers, contractors and maintenance engineers must work together to prevent and address moisture accumulation both during construction and throughout a building's life cycle. The best and most cost-effective strategy is to prevent water intrusion with good design, construction, and maintenance practices.

USG helps owners and specifiers provide additional safeguards against mold and mildew growth with several high-performance ceiling solutions:

Dual inhibition of mold/ mildew and bacteria

Many USG mineral-fiber panels with *CLIMAPLUS*[™] performance are treated with a patented, broad-spectrum antimicrobial standard formulation that inhibits and retards the growth of mold/mildew and odor/stain-causing bacteria.

Superior protection and warranty coverage

A variety of USG mineral-fiber ceiling panels provide *CLIMAPLUS* Superior Performance to achieve a "no growth" 10 rating per ASTM mold/mildew tests. These are the only standard ceilings panels on the market with a limited lifetime (30-year) warranty against mold and mildew growth.

For more information about USG ceiling panels with antimicrobial treatment, see the Sustainability selector on pages 101-102.

Sustainable Design

Formaldehyde-Free and Low-Formaldehyde Products

Indoor environmental quality (IEQ) is a vital consideration because it has such an impact on the health and wellbeing of a building's occupants.

The choice of building materials is a critical factor because many products can release volatile organic compounds (VOCs), which include thousands of synthetic and natural chemicals emitted by a wide array of materials, finished products, and even microorganisms such as mold and mildew.

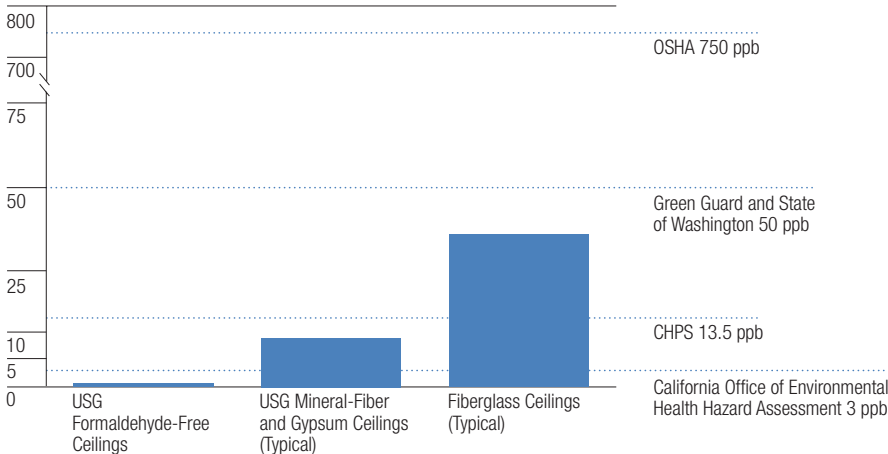

To help building professionals create healthy, comfortable spaces, USG formulates all ceiling panels and tiles with very little or no formaldehyde:

- Most panels outperform levels set by OSHA, Green Guard, and the State of Washington.
- Many mineral-fiber and gypsum-panel ceilings outperform standards established by the Collaborative for High-Performance Schools (CHPS).
- Several products meet or exceed the extremely stringent standard of the California Office of Environmental Health Hazard Assessment. Classified as formaldehyde-free, these products can help qualify for LEED EQ1 credit 3.2 and meet the intent of LEED credits 4.1, 4.2, 4.3, 4.4 and 5.0.

For more information about formaldehyde-free and low-formaldehyde ceiling products, see the Sustainability selector on pages 101-102.

Outperforming the Highest Standards

Formaldehyde (ppb)

Earn LEED Credits

The most widely accepted national guidelines for environmentally conscious building is the LEED (Leadership in Energy and Environmental Design) GREEN BUILDING RATING SYSTEM® developed by the United States Green Building Council. As a founding member of the USGBC, USG is committed to helping architects and builders create structures that efficiently meet the needs of occupants while also protecting the surrounding environment.

LEED provides a third-party certification tool for verifying that a project has met the technical requirements of sustainable building through various aspects of its design and construction. A project may be awarded one of four levels of certification by earning up to 69 points in six categories. Following are credits for which USG ceilings may help a project qualify.

LEED Category	Available Credits	Products/Programs that May Assist in Qualifying for Credit
Energy and Atmosphere	— EA 1: Optimize Energy Performance	— Ceiling panels with high light reflectance (LR) can reduce the number of light fixtures needed, curbing energy consumption. See pages 88-89.
Materials and Resources	— MR 1.3: Building Reuse – Maintain Interior	— Cast-mineral-fiber panels are baked solid in molds for abuse resistance and through-color to resist abrasion and mask scrapes. See page 92.
	— MR 2.1 and 2.2: Construction Waste Management – Divert from Disposal	— USG offers a nationwide recycling program that can take back approved mineral-fiber panels, reducing the impact on landfills. See page 100.
	— MR 3.1 and 3.2: Resource Reuse	— Panels may contain synthetic mineral fiber converted from slag, a byproduct of steel making. Metal ceilings and components may include recycled aluminum. See page 13.
	— MR 4.1 and 4.2: Recycled Content	— Panels may contain paper recovered from both pre-consumer and post-consumer use. See pages 101-102.
	— MR 5.1 and 5.2: Regional Materials – Extracted, Processed and Manufactured Regionally	— For manufacturing locations of USG ceiling products, see pages 101-102.
	— MR 6: Renewable Materials	— Panels may contain corn and wheat starch binders, renewable alternatives to traditional petroleum-based binders. See page 13.
Indoor Environmental Quality	— EQ 4.1, 4.2, 4.3 and 4.4: Low-Emitting Materials	— All USG products are low-VOC emitters, and many panels emit no formaldehyde or only a very low amount. See pages 101-102.
	— EQ 8.1 and 8.2: Daylight and Views	— Ceiling panels with high light reflectance (LR) can improve the quality and quantity of natural light by enhancing indirect lighting. See pages 88-89.

Acoustical Performance

The sound symbol on the product information pages in this catalog identifies USG ceiling panels designed to help improve privacy, comfort and productivity by effectively absorbing sound and blocking sound transmission. Privacy can be further enhanced with sound masking, which covers noise not absorbed or blocked.

In addition to making work spaces more acoustically comfortable, high-performance ceiling panels and sound masking can help highly regulated industries comply with federal privacy rules, such as the Health Insurance Portability and Accountability Act (HIPAA) in the healthcare industry and the Financial Services Modernization Act of 1999, also known as the Gramm-Leach-Bliley Act (GLBA), in the financial industry.

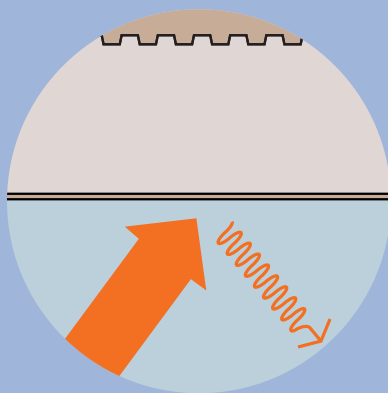

Here's a closer look at how quality USG ceiling panels and Lencore sound masking systems make spaces more pleasant, productive and industry compliant.

Sound Absorption

Noise Reduction Coefficient (NRC) measures the degree to which a ceiling panel absorbs sound. Ceiling panels with a high NRC value are most appropriate for open areas because they can reduce reverberation within a space.

NRC is represented by a number between 0 and 1.00, which indicates the percentage of sound reaching it that will be absorbed. For example, an acoustical ceiling panel with an NRC value of .60 will absorb 60% of the sound that strikes it and deflect 40% back into the space. A ceiling panel with an NRC of .50 or higher is considered to offer significant sound absorbing properties.

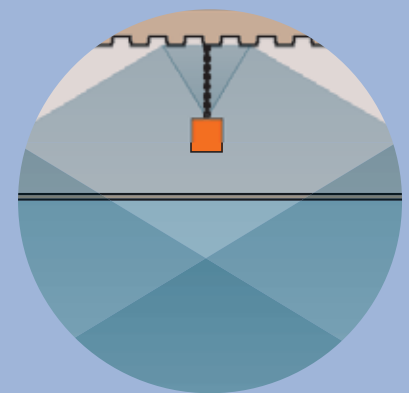

Sound Absorption

Sound Blocking

Sound Masking

Sound Blocking

Ceiling Attenuation Class (CAC) indicates the ability of a ceiling system to reduce sound transmission. Panels with a high CAC value can improve privacy in enclosed spaces by blocking sound from transmitting up into the plenum and down to adjacent rooms. A ceiling panel with a CAC of 40 will reduce transmitted sound by 40 decibels (dB). A ceiling panel with a CAC of 35 or higher is considered to offer significant sound attenuation properties.

Sound Masking

Quality ceiling panels can absorb and block significant amounts of sound, but noise may still transmit and reflect to adjacent areas. A critical design decision is to add sound masking, which can cover noise and “mask” conversation in open areas and improve speech privacy in enclosed offices.

To help you achieve this level of acoustical performance, USG has teamed up with Lencore Acoustics, an industry leader in sound masking, to offer an effective, affordable solution that can significantly improve sound control in the environments you create. Sound masking helps you:

Equalize background sound. Lencore sound masking works by electronically producing a unique sound spectrum similar to that of softly blowing air. This carefully engineered sound is amplified through individual speakers installed above the suspended ceiling. The sound masking fills the plenum area and gently filters down through the ceiling panels into the space below, uniformly raising the background sound level to cover distracting office noise.

Improve concentration and speech privacy. In open-plan offices, sound masking can help workers concentrate without interference from nearby speakerphones, conversations and meetings. In enclosed offices and conference rooms, sound masking and high-CAC ceiling panels work together to prevent intelligible conversation from being overheard outside.

Provide acoustical balance. Even exceptionally quiet environments can benefit from sound masking. In these spaces, the faintest sounds—rustling papers, drawers opening and closing—can be distracting. By providing greater acoustical balance, Lencore sound masking can make almost any space more comfortable, functional and productive.

To learn more about how sound masking can enhance the sound control and speech privacy performance of a USG ceiling, see pages 230-231 or visit Lencore Acoustics online at www.lencore.com. Local assistance is available from Lencore expert representatives in all 50 states to provide complete project services and support, from acoustical analysis through system installation and tuning.

Specialized Performance

Many interior environments with demanding functions (such as food preparation, hydrotherapy, exercise, athletics and cleanroom control) require performance beyond aesthetics, sound control and sustainability. USG offers many options to meet a diverse range of performance needs.

Abuse Resistance

Routine plenum access can blemish panels with unsightly scratches, and chips and dents can occur in high-traffic areas such as hallways, classrooms and gyms. When durability is key, consider the following products.

Cast ceiling panels, available exclusively from USG, are formed and cured in molds, making them up to three times stronger than standard panels. Cast panels feature an integrally color-coordinated substrate to mask nicks or scrapes. Panels include:

- BRIO™ *CLIMAPLUS*™
- “F” FISSURED™
- FRESCO™ *CLIMAPLUS*™
- FROST™ and FROST™ *CLIMAPLUS*™
- GLACIER™
- SANDRIFT™ *CLIMAPLUS*™
- SUMMIT™ *CLIMAPLUS*™

Specially formulated mineral-fiber ceiling panels feature higher-density construction and special finishes to enhance durability and damage resistance. Panels include:

RADAR™ *CLIMAPLUS*™ High-Durability panels deliver 20% greater durability than competitive “school products” and 55% more than standard acoustical panels.

ROCK FACE® *CLIMAPLUS*™ and TOUCHSTONE™ *CLIMAPLUS*™ panels feature special textures and coatings for enhanced abuse resistance.

MARS™ *CLIMAPLUS*™ panels resist visible damage in independently verified surface scratch tests and withstand 150 scrub cycles without surface break using the Gardner Scrubability Test, per ASTM D2486¹.

SUMMIT *CLIMAPLUS*

fine-textured panel

SANDRIFT *CLIMAPLUS*

medium-textured panel

1. Standard Test Methods for Scrub Resistance of Wall Paints.

Humidity Resistance

Moist air in indoor pool areas, shower and locker rooms, and buildings not fully enclosed can cause standard panels to visibly sag. For high-humidity areas, choose panels with *CLIMAPLUS* performance. These products resist sag in up to 95% relative humidity and up to 104 °F. *RADAR™* Ceramic *CLIMAPLUS™* panels even resist sag in up to 100% relative humidity. *CLIMAPLUS* products carry a limited warranty of up to 30 years when installed on a *DONN®* brand suspension system.

Fire Resistance

USG offers many ceiling panels with *FIRECODE™* formulation, which provides special additives for increased fire resistance. Fire-rated suspension main tees are manufactured with relief notches that will contract in high heat to hold the ceiling assembly together and prevent collapse. Fire-rated panels and suspension system components are identified with the fire icon on the individual product pages in this catalog.

Cleanliness

Cleanrooms, food preparation areas and computer rooms require ceilings with specific attributes and performance levels. *CLEAN ROOM™ CLIMAPLUS™* Class 10M-100M and Class 100 panels feature vinyl laminated surfaces and meet Federal Standard 209E, “Clean Room and Work Station Requirements Controlled Environments.” *SHEETROCK®* brand *CLEAN ROOM™* lay-in ceiling panels with gypsum core, sealed edges and vinyl face and back, can also be used in cleanrooms up to Class 100. Cleanroom-rated applications require a suspension system with gasketed tees such as the *DONN* brand CE system.

For food preparation areas, choose Class 100 panels or *SHEETROCK®* brand Vinyl *CLIMAPLUS™* lay-in ceiling panels, which meet U.S. Department of Agriculture Food Safety Inspection Service requirements.

Exterior Applications

Exterior soffits and ceilings in open parking garages and marine environments are subjected to large temperature swings, wind, humidity and incidental water exposure. USG offers several products that can be used in these challenging applications:

- *SHEETROCK* Vinyl *CLIMAPLUS* lay-in ceiling panels
- *DONN®* brand *ZXLA™* hot-dipped galvanized suspension system with aluminum cap
- *PARALINE®* linear metal ceiling system, wind-load tested to 120 mph.
- USG drywall suspension system for flat ceilings

Code Compliance

Building codes seek to ensure safer, stronger building systems and structures and minimize damage and liability in natural disasters and accidents. Key codes governing ceiling design address fire and seismic protection, design and construction.

Fire Resistance

Fire resistance refers to the ability of a ceiling, wall or floor assembly to serve as a barrier to fire and prevent its spread due to collapse, breaches in the barrier or excessive heat conduction.

Ratings

A fire-resistance rating (fire rating) classifies the length of time a ceiling can confine and isolate flame outside and resist heat transfer into a zone of fire resistance-rated wall, ceiling and floor assemblies. Fire-rated assemblies are tested and certified in their entirety by Underwriters Laboratories, Inc. USG offers more than 300 UL fire-rated ceiling assembly designs that have achieved UL fire ratings of up to three hours.

Another common life-safety rating is established by ASTM E84². With this test, a material is exposed to flame and analyzed for two performance factors: flame spread and smoke developed. All USG acoustical ceiling panels are rated Class A (the highest possible) based on this test. These materials do not sustain a fire when flame is removed and do not generate significant amounts of visibility-obscuring smoke. Class A is not a fire-resistance designation.

Components for Fire-Rated Ceiling Assemblies

USG ceiling panels with FIRECODE formulation contain special additives that increase fire resistance and may qualify for use in fire-rated assemblies. FIRECODE panels are identified with a fire resistance icon on the individual product pages in this catalog.

Fire-rated ceiling assemblies also require demanding suspension system performance: main tees with fire relief notches, which contract in high heat to hold the ceiling together and prevent collapse. Several USG suspension systems are available with this important feature and are identified with a fire resistance icon on individual product pages.

For more information on fire-rated ceiling designs, see the UL Fire Resistance Directory, which is updated every year and can be viewed at www.ul.com. For a summary of USG fire-rated assemblies, see pages 233-242.

2. Standard Test Method for Surface Burning Characteristics of Building Materials.

New Seismic Requirements

Seismic force levels and design criteria were once considered only in certain earthquake-prone locations. But major revisions to the International Building Code (IBC) now require seismic ceilings throughout the U.S.

In addition to geographic location, the new code considers soil type at the building site and building function (e.g., hospital, school). Based on these criteria, more than half of the U.S. is now considered to be at some level of risk for seismic activity.

Today, the design team, consulting engineers and code officials must work together to analyze these factors and determine the applicable seismic design category (A–F). This information is now required for every construction project and must be included in the construction documents.

Components for Seismic Ceilings

Seismic ceiling design requirements apply specifically to the suspension system. The new guidelines expand the use of heavy-duty grid and 2" wall angle, which are required in seismic design categories D, E and F.

DOWN interior suspension systems are designed and qualified for use in seismic designs throughout North America. All USG suspension system main-tee and cross-tee connections meet IBC requirements for tension and compression strength. In some cases (IBC design categories D, E, and F), heavy-duty main tees are required. Applicable IBC and UBC seismic design categories for each suspension system tee are identified on the individual product pages in this catalog.

We also offer a 2" seismic shadow molding (MS274), which features a 3/4" reveal located by the wall to disguise its width. Note that the IBC (2003 edition, section 1621.2.5.2) provides no allowance for anything other than 2" wall molding in seismic design categories D, E, and F. The ACM7 seismic clip supports tee ends at the wall, eliminating pop rivets and allowing either "fixed" or "floating" tee attachment to M7 wall molding. Even with this clip, however, 7/8" wall molding may not be used in IBC categories D, E, and F unless approved by local code officials. No manufacturer offers a clip that is exempt from this requirement.

Learn more at www.seismicceilings.com.

To find out more about new requirements for seismic ceilings, visit the USG Seismic Ceilings Resource Center at www.seismicceilings.com. This informative new online resource features in-depth articles about the code change, FAQs, and interviews with ceilings experts. It also includes a comprehensive library of architectural details downloadable in PDF and CAD formats.

Wave Pattern

Weave Pattern

Features and Benefits

- Organic, 3-dimensional panels punctuate flat ceiling planes with rhythm and depth to create eye-catching focal points.
- 2' x 2' pre-formed LEXAN® panels create myriad patterns with just one simple panel shape.
- Lightweight, lay-in panels install into 9/16" narrow-profile and standard 15/16" Donn® brand suspension systems, allowing full ceiling accessibility.
- Luminous panels may be backlit with fluorescent strip fixtures or integrated with standard lay-in fixtures.

Applications

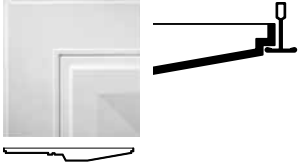

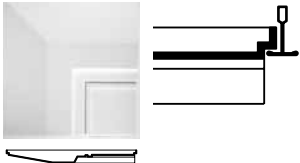

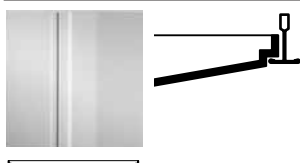

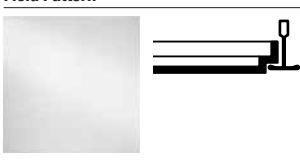

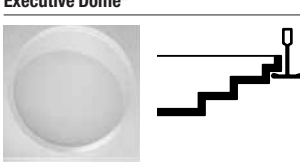

- All interior commercial applications.

Literature Number IC308

Product Information	Materials	Aluminum panels: Painted or anodized.		
	Finishes	Premium metal, anodized, and smooth or perforated panels in Flat White, Silver Satin and custom colors. See Metal Finishes and Metal Perforations selectors for more finish options.		
	Typical Sizes¹	2' x 2', 4' x 4' ² , 30" x 30"		
	Plenum Depth	Since panels are installed from below, the clearance for installation and removal of panels is minimal. Additional plenum clearance of up to 9" is required for air boot and lighting installations, depending on the unit selected.		
	Grid Layout	The modular nature of CELEBRATION ceilings must be considered when an installation is designed. Main tees and cross tees are exactly on module lines. Panels may be field-cut at walls and columns or terminated at a grid module for island installations.		
Acoustics	Description	Optional Acoustical Material	Sound Rating – NRC	
			Perforation A062	Perforation A116
	Perforated panel	ACOUSTIBOND backer	.65	.70
	Perforated panel	1-1/2", 6 lb. density fiberglass	.90	.95
Perforated panel	2", .75 lb. fiberglass in poly bag	.85	.90	
Air Handling	Air diffusers may be located around the perimeter of the ceiling or laid into the grid in place of CELEBRATION panels. The CELEBRATION diffuser is an extruded aluminum frame with matching faceplate and color-coordinated vanes, in 1-, 2-, 3-, and 4-slot configurations, with four-directional throw.			
Weight	Approximately .53 lbs. per sq. ft., not including lights and air diffusers.			
Code Approval	CELEBRATION panels provide a continuous interlock with the suspension system. Supporting grid is capable of sustaining loads greater than those imposed by the CELEBRATION system when installed in accordance with manufacturer's instructions.			

Perspective

CELEBRATION Air Diffuser
Available in 1-, 2-, 3- and 4-slot configurations, with four-directional throw.

Read material safety data sheets and related literature on products before specification and/or installation.

The following are trademarks of USG Interiors, Inc., or a related company: ACOUSTIBOND, CELEBRATION, DONN, FINELINE, USG.

Features and Benefits

- Aluminum panels combine great looks with the strength of metal.
- Precision 1/4" reveal and concealed suspension system provide a monolithic appearance.
- Available in numerous perforation patterns in painted, anodized metals.
- Snap-up installation with downward access is excellent for shallow plenum areas.
- Close tolerances provide exact fit and secure, vibration-free installation with clean intersections.
- Easy installation into USG's standard DONN® brand FINELINE® suspension system.
- ACOUSTIBOND® sound backer produces .65 NRC without additional acoustical material when used with perforated panels within an enclosed plenum. (minimum plenum depth 18")
- Systems up to 30" wide and 78" long windload tested to 120 MPH with proper bracing and exterior framing.

Applications

- Entertainment
- Gaming
- Exterior soffits
- Hospitality
- Transportation terminals

Office

Features and Benefits

- Creates free-form island ceilings or fascias with USG panels and grid to define space and provide visual impact.
- Available in six trim heights: 2-1/4", 4", 6", 8", 10" and 12".
- Costs a fraction of conventional drywall soffit construction.
- Made to order—arrives onsite pre-engineered.
- Strong, durable, and long-lasting steel or aluminum construction.
- Precision engineering guaranteed to fit all USG ceiling systems.

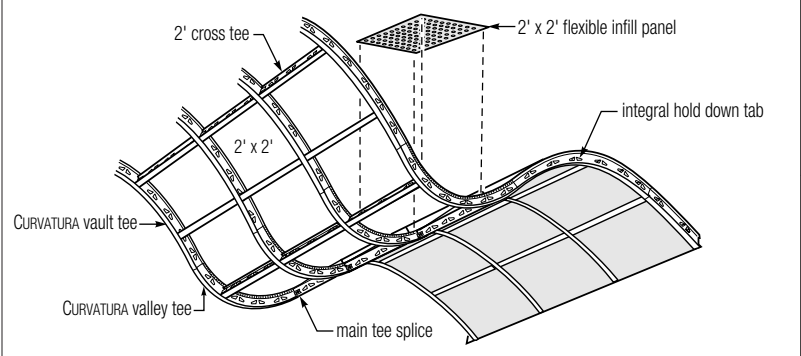

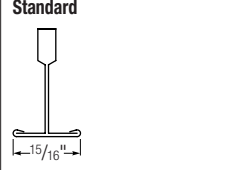

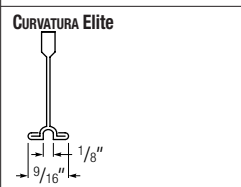

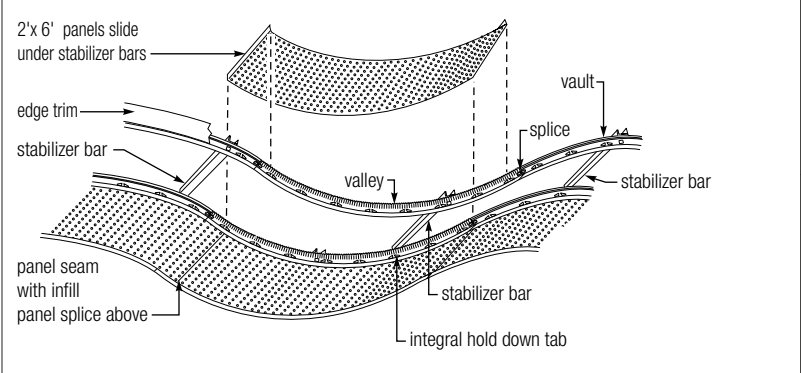

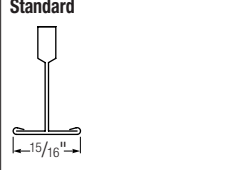

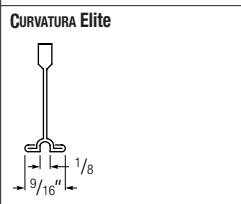

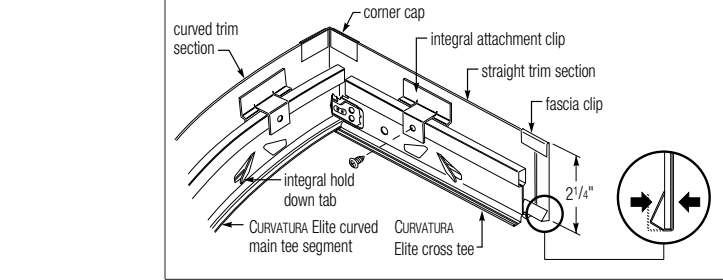

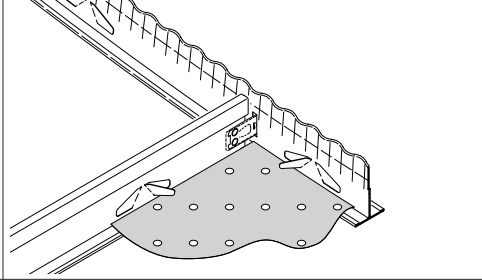

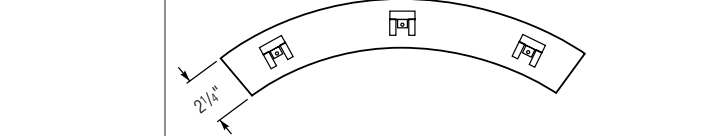

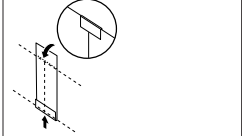

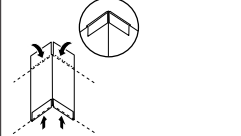

Applications

- Contemporary offices
- Entertainment
- Gaming
- High-bay areas
- Retail spaces
- Virtually anywhere

Curvatura™ 3-D System

Features and Benefits

- Create dramatic three-dimensional curved designs that combine shape, texture and lighting.
- Curved main tee segments and flexible panels provide endless combinations.
- Available in two configurations: One-Directional CURVATURA™ with 2'x 6' infill panels, and Two-Directional CURVATURA™ with 2'x 2' panels.
- Two system profiles: traditional CURVATURA (15/16" grid profile) and CURVATURA Elite (9/16" profile with 5/32" reveal).
- Available in Standard colors, Advantage colors and custom colors.

Applications

- Contemporary office environments
- Entertainment, gaming
- High-bay areas
- Retail space

Product Information	Materials	Panels: Aluminum ¹		
	Finishes	Panels are available in smooth metal or in a choice of five perforated patterns (C375, D250, D375, C062 and C062A). A black ACOUSTIBOND [®] backer is included on all perforated panels unless otherwise specified. ACOUSTIBOND backer is also available in white.		
	Colors	Standard colors are Flat White and Silver Satin. Custom colors are available on request.		
	Acoustics¹	Description	Optional Acoustical Material	Sound Rating – NRC

Basketweave Pattern

Alternating Sawtooth Pattern

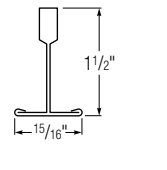

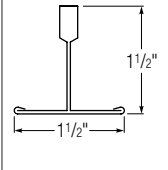

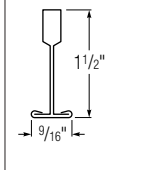

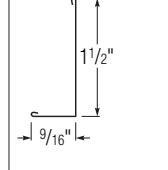

Features and Benefits

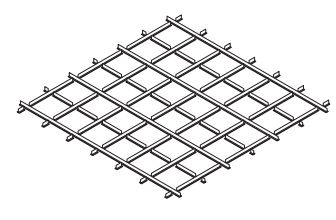

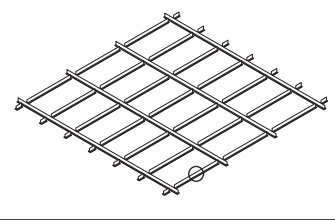

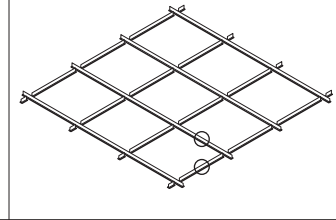

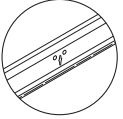

- Multiple profiles and depths lend new dimension to ceiling and wall design.
- Panel depths ranging from 1-1/4" to 3" allow a spectrum of possibilities, from subtle textures to bold rhythms.
- 2' x 2' lay-in panels are compatible with 9/16" - and 15/16" - profile DONN® brand suspension systems.
- Solid or perforated panels are available in Flat White, Silver Satin and custom colors for design versatility.

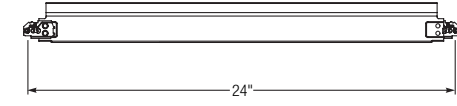

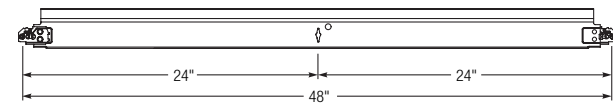

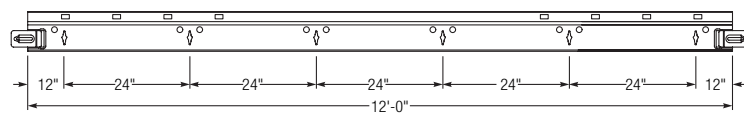

Applications

- All commercial applications

Product Information	Materials	Double-web, hot-dipped galvanized steel body and steel cap with chromated cross-tee clip.
	Finishes	<ul style="list-style-type: none"> - GWDX stocked in Flat Black, Flat White, and Silver Satin pre-painted, baked polyester paint finishes with exposed chromate cross tee clips; touch-up paint is available to field-paint cross tee clips to match the finish. Spray-painted, baked polyester finish with 100% tee coverage available as a special order. - GWDXW and GWDXT available as a special order only; finish is spray-painted, baked polyester with 100% tee coverage.
	Typical Sizes	2' x 2' module; 2' x 2', 2' x 4' and 4' x 4' cells

1. ACOUSTIBOND backer not standard with DIAMONDFLEX panels.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Features and Benefits

- Simple lay-in design provides 100% access.
- ACOUSTIBOND® sound backer produces .65 NRC without additional acoustical material when panels are installed within an enclosed plenum (minimum plenum depth: 18”).
- Aluminum panels are easy to clean and durable.
- Available in numerous perforation patterns in painted, anodized, DIAMONDFLEX™ and natural metals.
- Uniquely designed trim provides reveal edge on field-cut panel.
- Available with same edge details as USG acoustical panels.

Applications

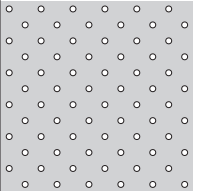

- Computer and utility rooms
- Entertainment
- Gaming
- Frequently accessed plenums

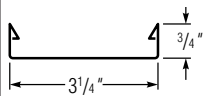

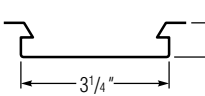

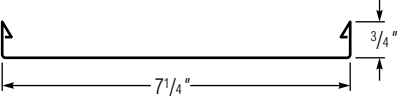

Paraline

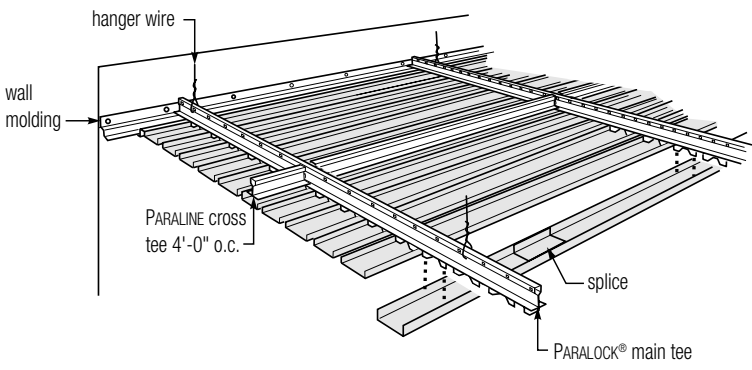

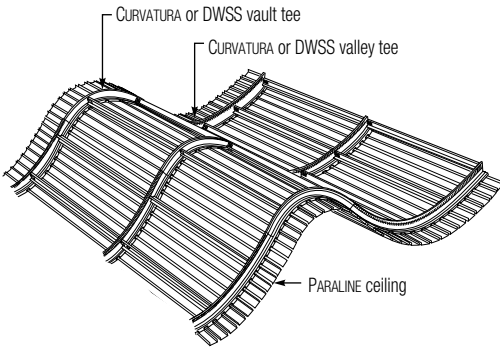

Specialty Ceilings
Linear Metal Ceiling System

Literature Number IC315

Product Information	Materials	PARALINE I, II, and III: Aluminium.
	Finishes	Painted colors: Flat White, Silver Satin, Metallic Oyster, Metallic Copper, Metallic Gold; also available in Polished Aluminum and Brushed Aluminum. Perforations available: PARALINE II only.
	Typical Sizes	3-1/4" x 12', 7-1/4" x 12'

PARALINE II Perforation Pattern		Round—1/16" perforations .235 o.c., 5% open area (Perforation shown 50% actual size)
--	---	--

Details	PARALINE I	PARALINE II	PARALINE III
			
	PARALINE I ceilings use 3-1/4" wide pans with roll-finished edges. Once assembled, the pans provide an open reveal for excellent acoustical control (sound is absorbed by acoustical material in the plenum).	PARALINE II ceilings maintain the 3-1/4" wide pan dimension, but are constructed with integral flanges that overlap to form a reveal closure that is appropriate for exterior soffit applications. Perforated available.	PARALINE III ceilings have bolder, 7-1/4" wide pans for larger-scale applications. Pans have a roll-finished edge to provide the same open reveal as PARALINE I with similar acoustical control.

Perspective	USG Drywall Suspension System or CURVATURA Suspension For PARALINE Wave Ceilings

The following are trademarks of USG Interiors, Inc., or a related company: CURVATURA, PARALINE, PARALOCK, USG.

Features and Benefits

- Elegant linear metal ceiling system features 12' long linear metal pans attached to a specially engineered suspension system, such as the CURVATURA™ 3-D System.
- Closed reveal PARALINE II pans are appropriate for exterior ceiling applications under protected soffits, as well as interior applications.
- Available in painted, anodized, and polished finishes.
- Snap-up design offers unlimited access with minimum plenum depth requirements.
- Wind load tested (120 mph) for exterior applications.
- Available with perforated pans for PARALINE II for NRC ratings as high as .95 when backed with fiberglass.

Applications

- Exterior soffits
- High bay areas
- Retail stores
- Transportation terminals

Topo™ 3-Dimensional System

Utility circle at suspension intersection

Utility circle centered in panel

System At a Glance

Transform flat ceiling planes into gently rolling landscapes with pre-formed panels that install easily into the narrow-profile DONN® brand Topo suspension system.

Features and Benefits

- Two system depths (8" and 12") create varying ceiling topographies.
- Translucent and opaque LEXAN® infill panels in five colors enhance existing lighting for added visual interest.
- Optional pre-engineered utility circles accommodate additional lighting and utility access.

Applications

- All commercial applications

Product Information

Materials	0.045" (FRP Smooth); 0.060" (LEXAN®)
Finishes	LEXAN Glass Green Matte, LEXAN Clear Matte, and Natural FRP. Coordinating suspension system colors.
Typical Sizes	2' x 2' (23-3/4" x 23-3/4").
Acoustics	This product does not offer any acoustical properties.
Lighting	Fluorescent strip fixtures should be placed a minimum of 18" above the ceiling and 18" o.c. for best results.
Light transmission	64% (FRP Smooth); 79% (LEXAN Glass Green Matte); 85% (LEXAN Clear Matte)
Suspension Systems	Lays into standard DOWN DX/DXL and CENTRICITEE (DXT) suspension systems. Also can be used with the CURVATURA 3-D System and GRIDWARE suspension system.
System Weight	Approximately 0.7 lbs. per sq. ft.

Product Information	Materials	Blocks: 100% acrylic. Grid: Steel.
	Finishes	Panels: Clear Highlighters: Red, Green, Yellow, Blue, and Orange (used to change one block or the entire panel color).
	Typical Sizes	2' x 2'
	Module Size	Full 2' x 2' modules only.
	Plenum Depth	Plenum depth requirements are generally a function of lamp spacing. The minimum recommended plenum depth for uniform lighting distribution is 18", measured from the bottom of the fluorescent tubes to the bottom of the grid.
	Acoustics	If noise reduction is vital, adjacent ceiling, wall, and floor materials should be chosen with consideration of their acoustical properties.
	Lighting	Fluorescent strip fixtures should be placed a minimum of 18" above the ceiling and 18" o.c. for best results.
	Grid Layout	Each 2' x 2' TRANSPARENCIES panel consists of nine 8" simulated glass block squares spaced 9/16" apart. Center lines of main and cross runner T-bar webs are exactly on module lines.
Weight	Approximately 1-1/2 lbs. per sq. ft.	
Code Approval	Permitted for use where Class 1 finish materials are required under the provisions of Chapter 8 (1997) of the Uniform Building Code. The roll-formed grid is Class A and non-combustible. Load limits of the grid exceed those imposed by the TRANSPARENCIES system when installed in accordance with the manufacturer's instructions.	

Patterns	Ice Cube	Icicle	Melting Ice	Crushed Ice

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

The following are trademarks of USG Interiors, Inc., or a related company: CENTRICTEE, DONN, TRANSPARENCIES, USG.

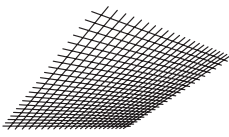

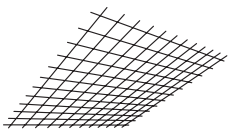

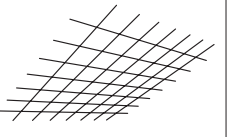

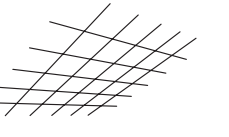

Features and Benefits

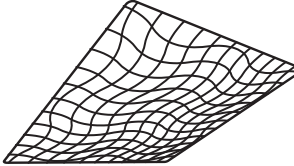

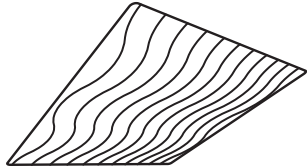

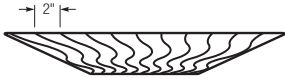

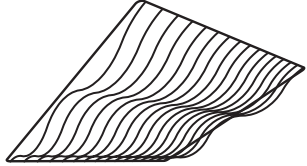

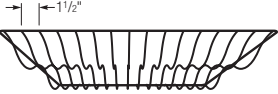

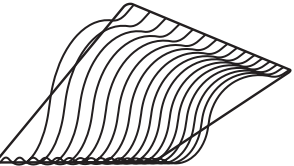

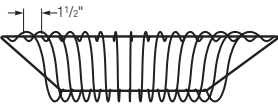

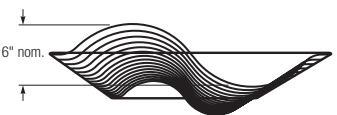

- Fully accessible luminous ceiling system provides the aesthetic of sunlit glass block with just a fraction of the weight, cost, and installation time of real glass.
- Panels consist of nine injection-molded 8" x 8" blocks, factory assembled into a 2' x 2' lay-in panel for fast installation and full accessibility.
- Special DONN® brand CENTRICITEE™ suspension system is texturized to create "mortar joints."
- Standard fluorescent strip fixtures can be used to give the feel of sunlight even on interior floors.
- 8" x 8" highlighters, available in five translucent colors, change the color of an individual block or an entire panel.
- Four unique textures based on real glass block patterns ensure an authentic look.

Applications

- Accent areas
- Grocery stores
- Libraries
- Retail stores

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Features and Benefits

- Metal, woven lay-in panels with powder-coated finish are abuse resistant and highly durable.
- Four cell sizes offer flexibility to meet design and budget needs.
- Combine with the GRIDWARE™ suspension system to create custom ceiling system.
- Easy installation into standard DONN® brand suspension systems.
- Easily accommodates lightweight signage.
- Available in High-Gloss White, Advantage colors, Chrome, and custom colors.

Applications

- Accent areas
- Educational
- Health care
- Retail stores

The Light Reflectance selector identifies USG ceiling panels that efficiently reflect light within a space to enhance indirect lighting, reduce energy consumption and create a warm, luminous aesthetic. Measured per ASTM E1477¹, LR value represents the percentage of light reflected from the surface of a material. The industry average for panels is LR .70 to .80, and values above LR .85 are considered high. USG offers numerous panels with LR values at these levels, including MARS *CLIMAPLUS*, RADAR ILLUSION and RADAR *CLIMAPLUS* ILLUSION with LR .89.

Indirect lighting, combined with high-LR panels, can eliminate dark, shadowy areas and too-bright hot spots, improving the look and feel of a space and minimizing eyestrain (a cause of employee fatigue). High-LR ceilings can also help conserve energy and cut operating costs by achieving the same light levels with fewer fixtures and lower-wattage bulbs. Fewer fixtures also mean less repairs and lower maintenance costs.

Architects typically select high-LR ceilings for spaces that make extensive use of indirect lighting. However, these panels can enhance almost any lighting scheme and so can be an effective choice for many design applications. Many USG panels with high LR values also feature high NRC and CAC ratings so you don't have to compromise acoustics for aesthetics. Panels are available in a range of textures including smooth and very fine, many include *CLIMAPLUS* sag resistance, and several are cast products, which provide a higher level of durability to resist and hide scrapes and scratches.

Choosing high-LR ceiling panels is a great way to improve the utility and comfort of the spaces you design and make your projects bright and inviting.

1. Standard Test Method for Luminous Reflectance Factor of Acoustical Materials by Use of Integrating-Sphere Reflectometers.

Performance Substrates

USG is the only manufacturer with the capabilities to produce acoustical ceiling panels with five different substrate technologies to achieve the full range of functional and aesthetic needs. Available substrates include cast mineral fiber, X-Technology mineral fiber, water-felted mineral fiber, fiberglass, and gypsum panel ceilings.

Profile	Construction	Applications	Available Panels	Page No.
Cast Mineral Fiber 	Formed and baked solid in molds to create a long lasting, abuse-resistant surface in a range of textures.	Open-plan areas subject to frequent plenum access that require strong sound absorption (NRC) and sound blocking (CAC) performance. Enclosed areas requiring speech privacy. Ceilings requiring exceptionally durable, long-lasting panels. High-visibility areas that require color and/or a range of texture options.	BRIO CLIMAPLUS	114
	Through-color masks nicks and scratches.		"F" FISSURED	122
	Orients fibers for excellent sound absorption and high noise reduction coefficients (NRC).		FRESCO CLIMAPLUS	126
	Composition enhances sound blocking (CAC) and resists "breathing" (air passing through panel) so surface stays cleaner, longer.		FROST	128
	Surface cleans easily with a soft brush or vacuum.		FROST CLIMAPLUS	130
X-Technology Mineral Fiber 	Unique process creates a smooth surface with high noise absorption (NRC) and blocking (CAC).	Open-plan areas that require strong sound absorption (NRC) and sound blocking (CAC) performance. Ceilings that require a level of dimensional stability beyond that of standard water-felted mineral-fiber panels. Designs that require a ceiling with a smooth appearance that can be cleaned easily with a soft brush or vacuum.	ASTRO CLIMAPLUS	112
	Superior sag resistance and outstanding dimensional stability.		ECLIPSE CLIMAPLUS	118-123
	Surface cleans easily with a soft brush or vacuum.		MARS CLIMAPLUS	136
			MILLENNIA CLIMAPLUS	138-141
			ORION 210 CLIMAPLUS	144
Water-Felted Mineral Fiber 	Surface perforations aid sound absorption.	General-use areas requiring a balance of acoustical control and economy. High ceilings subject to infrequent plenum access and out of the way of activity below.	ASPEN	110
	Creates a variety of surface textures.		CLEAN ROOM CLIMAPLUS Class 100	116
	Surface cleans easily with a soft brush or vacuum.		CLEAN ROOM CLIMAPLUS Class 10M-100M	116
			FISSURED	124
	Lowest initial cost.		OLYMPIA MICRO CLIMAPLUS	142
			PEBBLED CLIMAPLUS	148
	CLEAN ROOM panels have a vinyl face and back and sealed edges to meet federal standards for cleanrooms.		RADAR	154
			RADAR CLIMAPLUS	156-161
			RADAR Ceramic CLIMAPLUS	162
			ROCK FACE CLIMAPLUS	164

The Acoustical Ratings selector identifies USG ceiling panels that offer enhanced sound control properties. By absorbing sound and reducing sound transmission better than standard panels, these products can significantly improve acoustical comfort, privacy and productivity. Here's a closer look at what to consider when selecting a high-performance acoustical ceiling for your project.

High-NRC Panels Absorb More Sound

The Noise Reduction Coefficient (NRC) of a panel measures how effectively it absorbs sound. High-NRC ceiling panels are most effective in open areas because they can reduce reverberation within the space. NRC is represented by a number between 0 and 1.00, which indicates the percentage of sound reaching it that will be absorbed. For example, an acoustical ceiling panel with an NRC value of .60 will absorb 60% of the sound that strikes it and deflect 40% back into the space.

NRC of .50 or higher offers significant sound absorption, and USG panels designed for increased acoustical performance feature NRC ratings of .70 or above. Our HALCYON *CLIMAPLUS* ceiling panel offers an NRC of 1.00, the highest rating.

High-CAC Panels Reduce Sound Transmission

Ceiling Attenuation Class (CAC) indicates the ability to reduce sound transmission. High-CAC panels can improve privacy in enclosed spaces by blocking sound from transmitting up into the plenum and down to adjacent rooms. A ceiling panel with a CAC of 40 will reduce transmitted sound by 40 decibels (dB); CAC of 35 or higher offers significant sound attenuation.

Beyond Good Design

High acoustical performance is critical for clients that must comply with federal privacy rules. For example, the Health Insurance Portability and Accountability Act (HIPAA) requires that all physician offices, pharmacies and other healthcare facilities in the U.S. protect personal health information. This includes consultation areas, where doctor-patient conversations could be overheard.

The Financial Services Modernization Act of 1999, also known as the Gramm-Leach-Bliley Act (GLBA), requires that banks, investment companies and other financial institutions protect customer financial information from being inadvertently disclosed.

To provide an effective, affordable solution for speech privacy, USG has teamed up with Lencore Acoustics to offer the most comprehensive sound masking ceiling systems available. For more information on how USG ceiling panels and Lencore sound masking work together to improve speech privacy and enhance acoustical comfort, see pages 18-19 and 230-231.

1. Performance values do not include 12"x12" or Pedestals products.
 2. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.
 3. CAC is 40 when installed in FINELINE or FINELINE 1/8 suspension system.

Many USG ceiling panels are available with a choice of attractive face patterns, providing easy opportunities to enhance visual interest, adjust dimensional scale or add thematic cues.

Illusion Face Scoring

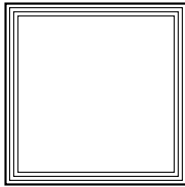

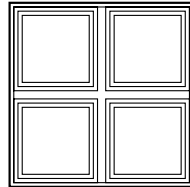

Create the appearance of a smaller-scaled ceiling system without compromising accessibility or increasing the complexity of the installation. Options include:

Illusion Two/24	Illusion Four/48	Illusion Eight/12	Illusion Thirty-Two/16
 <p>2'x4' panels with the look of 2'x2' panels.</p>	 <p>2'x4' panels with the look of 6"x4" panels.</p>	 <p>2'x4' panels with the look of 12"x12" panels.</p>	 <p>2'x4' panels with the look of 6"x6" panels.</p>

Pedestals Triple-Step Scoring

Available with select 2'x2' panels, Pedestals triple-step scoring adds detail and depth to the ceiling plane, providing an easy way to enhance the interest of your design.

Pedestals IV panels are scored in 12"x12" modules to further refine the ceiling with the look of a smaller-scaled system.

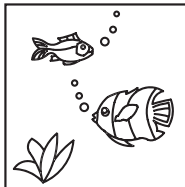

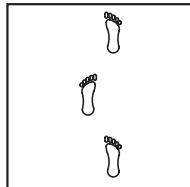

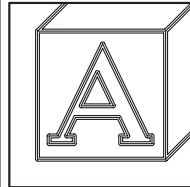

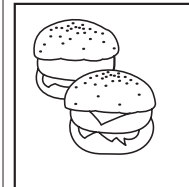

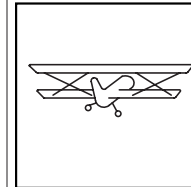

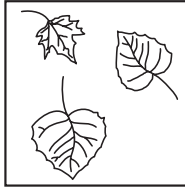

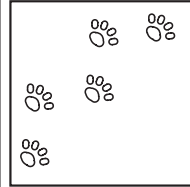

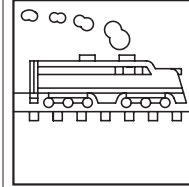

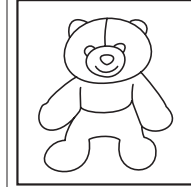

Pedestals I	Pedestals IV
	

RENDITIONS Face-Routed Ceiling Panels

Combine the fine texture of 2'x2' ECLIPSE, FROST or MILLENNIA panels with computer-generated face-routed designs to add detail, highlight a theme or differentiate areas within the

space. RENDITIONS panels are available in two standard series: Animations and Boundaries. In addition, virtually any custom design, including company logos or trademarks, can be produced.

Animations
Whimsical patterns designed for childcare facilities, educational environments, children's healthcare facilities and other themed environments.

Aquarium	Barefootin'	Blocks	Fast Food	Flying Things
				
Leaves	Night Sky	Paws	Railway	Stuffed Animals
				

	Curls	Deco	Dentil	Diagonal	
Boundaries Choose from simple and ornate border patterns to define space and add visual interest. Designs may cross grid lines to enhance wayfinding. Boundaries patterns may be especially suited to educational facilities, healthcare environments and retail spaces.					
	Renditions I	Tara			

Custom designs

Custom Renditions designs can be made from sketches or AutoCAD® drawings, and your designs may cross grid lines for the ultimate in flexibility. Numbered ceiling panels match shop drawings to ensure easy installation.

FROST panels with RENDITIONS face routing are available in Standard colors, Advantage colors and custom colors. ECLIPSE and MILLENNIA panels are available in White only. Panels with face routing do not carry the USG CLIMAPLUS non-sag warranty. Refer to standard commercial ceilings warranty. For more information about RENDITIONS face routing, see pages 66-71.

1. Panels with face routing do not carry the USG CLIMAPLUS non-sag warranty. Refer to standard commercial ceilings warranty.

Today's building industry focuses on conservation, recycling and long-term performance in a comprehensive strategy known as sustainable design. This practice involves the careful selection of building materials, construction methods and design details to create structures that consume fewer natural resources to build, maintain and remain viable in the future.

USG ceiling products are designed to enhance the sustainability of your design by providing:

Recycled and Renewable Ingredients

Many USG acoustical ceiling panels contain mineral wool derived from slag, a byproduct of steelmaking, reducing the need to mine and process raw materials and minimizing landfill waste. Many panels also contain recycled paper. Binders are derived from corn and wheat starch, which are renewable agricultural resources.

The metal in many of our specialty ceiling and drywall suspension systems includes recycled content. Aluminum offers additional benefits in that it can be fully re-purposed by re-melting and salvaging the metal.

Support for Healthy Environments

Assuring a high level of indoor environmental quality (IEQ) is a key to sustainability because spaces that deliver comfort and functionality are likely to meet occupant needs long into the future without requiring extensive upgrades or renovations. To increase long-term practicality, architects must choose materials that not only perform well and look good but also support a healthy environment.

Many USG ceiling panels help to support healthy environments with:

Reduced volatile organic compounds (VOCs).

VOCs include thousands of synthetic and natural chemicals emitted by a wide array of products, building materials, and microorganisms. One common VOC is formaldehyde, a colorless and pungent gas. VOCs can cause numerous health effects in sensitive individuals, including eye, nose and throat irritation, headaches, skin reactions, fatigue, dizziness, loss of coordination and nausea.

To help building professionals create healthy spaces, USG offers many *CLIMAPLUS* ceiling panels and tiles that contain no formaldehyde or such low levels as to exceed stringent standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI). This high performance comes standard on these products, with no additional charge or lead time.

Choosing formaldehyde-free and low-formaldehyde ceiling products can also help earn LEED credits. Section 3.2, IAQ Management Plan, Before Occupancy, requires a total formaldehyde concentration of 50 ppb or less. As one of the largest surfaces in a space, a ceiling with low- or no-formaldehyde panels make a strong contribution toward achieving valuable credits – and creating a healthy, sustainable space.

Inhibition of mold, mildew and bacteria.

The presence of mold, mildew and other microbes is a symptom of a larger construction or maintenance problem such as condensation, building leaks, or improperly maintained ductwork or water pipes. Causes below the ceiling can include poor enclosure or exposure to outdoor elements, window leaks, slow air circulation, improper humidity control and low surface temperature.

Because mold spores are everywhere and they can grow on virtually any surface where moisture is present, preventing mold begins with moisture control through best building and maintenance practices. Adding the right protection in the right places is the second critical aspect of the mold-control equation.

USG helps architects and specifiers address the issue of mold and microbial growth by providing two levels of antimicrobial performance.

CLIMAPLUS Superior Performance ceiling panels (all ASTRO panels, select ECLIPSE panels and all CLIMAPLUS cast-mineral-fiber panels). The only standard ceiling panels on the market with a limited lifetime (30-year) warranty against mold and mildew growth, subject to use under normal conditions.

Panel face and back surfaces feature a USG-patented antimicrobial treatment that provides broad-spectrum control for mold/mildew, fungi, yeast, algae, and bacteria over the warranty period. After a 28-day incubation period, panels tested in accordance with ASTM D3273-00¹ and evaluated per ASTM D3274-95² have achieved a 10 rating. This is the highest rating achievable and signifies “no growth.”

CLIMAPLUS AntiMicrobial Treatment mineral-fiber ceiling panels and tiles. Controlled laboratory tests have demonstrated the effectiveness of USG CLIMAPLUS ceilings³ treated with a patented antimicrobial standard formulation that inhibits and retards the growth of mold/mildew, fungi, yeast and odor/stain-causing Gram-positive and Gram-negative bacteria. This formulation is a broad-spectrum antimicrobial treatment applied to panel face and back surfaces.

For more information about sustainable design issues that affect ceiling selection, see *Indoor Environmental Quality, Acoustical Ceiling Solutions* (SC2452). For details on products with low or no formaldehyde and antimicrobial treatments, see *Indoor Environmental Quality Certification of Performance for Acoustical Ceilings* (SC2451).

1. Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.
 2. Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Microbial (Fungal or Algal) Growth or Soil and Dirt Accumulation.
 3. See pages 101-102 for a complete list of qualifying products.

Sustainability

Complete the Cycle

Acoustical Ceilings Recycling Program

USG has manufactured wallboard with recaptured gypsum for more than 30 years. And, we're one of the nation's top users of recycled paper. Now USG can help meet the needs of a growing world and preserve natural resources by taking back approved ceiling panels from any manufacturer and recycling them into new building products. Recycling is:

The right thing. Recycling reduces waste and relieves pressure on overburdened landfills. Incorporating renovation waste into new building products can also slow the rate at which raw materials are extracted from the land.

Efficient. In the time required to haul small loads of old panels to the waste container, workers can palletize panels as they are removed.

Cost-effective. Panels can be palletized about as quickly as they are hauled and loaded into waste containers. And, you'll reduce container and landfill fees.

How it Works

We've designed this program to be fast, easy and cost effective. Just follow these simple steps:

1. Verify that the panels are recyclable

We can accept mineral-fiber ceiling products for recycling. Material must be clean, dry and approved by USG. No wood, metal or construction debris of any kind is permitted. Panels must not have come into contact with any hazardous material that requires special handling or disposal.

2. Stack the panels

Instead of hauling and loading old panels into a waste container, stack them neatly on shipping pallets. When a pallet is full, simply wrap it with plastic and set aside for pickup by a local USG distributor.

3. Contact USG for pickup

We'll arrange and pay to haul away the old panels. Just be sure to have a full truckload (30,000 square feet), and call your local USG representative at least five days before pickup is required. If you cannot fill a truck, additional options are available. Our goal is to prevent recyclable materials from being discarded into landfills.

Recycling can also qualify your project for LEED points. To find out more, contact your local USG representative or visit www.usg.com.

● CLIMAPLUS Superior Performance: Features a lifetime-warranted, high-performance antimicrobial treatment and achieves "no growth" 10 rating per ASTM mold/mildew tests. Panel face and back surfaces are treated with USG's patented, broad-spectrum antimicrobial treatment. This standard formulation inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. Treated panels achieved a 10 rating (signifying "no mold growth") when tested and evaluated per ASTM D3273-00 and D3274-95.

○ CLIMAPLUS AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria. Panel face and back surfaces treated with a patented, broad-spectrum antimicrobial standard formulation that inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria.

1. Formaldehyde VOC Classification, according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).
 2. Federal Trade Commission guidelines define recycled content as material recovered or diverted from the solid-waste stream, either during the manufacturing process (pre-consumer) or after consumer use (post-consumer).

Relative installed costs per square foot are approximate and based on USG ceiling panel and suspension system combinations shown. These estimates are different from panel-only costs shown on other product data pages.

Costs are calculated from national average ranges for a typical installation under ideal height and job site conditions. Actual installed costs may vary based on several installation factors.

1. Costs do not include 12"x12" products.

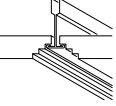

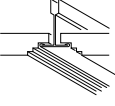

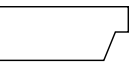

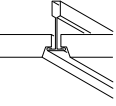

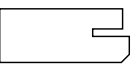

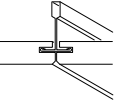

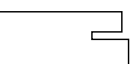

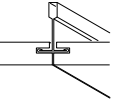

Suspension Systems

USG offers numerous suspension system and edge detail options to help meet your design requirements. Select a suspension system and match it with a corresponding panel edge detail, or vice versa, to assure proper system fit and assembly.

Footnotes

1. LR values are shown as averages.
2. Formaldehyde VOC Classification. Classified as low-formaldehyde according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).
3. For details, see the Sustainability selector.
4. Panels have a 15/16" routing.

Safety First!
 Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Medium-textured panel

Indoor Environmental Quality

- Classified as low-formaldehyde according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- Random, naturally sculptured appearance offers upscale look without upscale cost.
- Sizes and formulations meet most design criteria. Suitable for general applications.

Applications

- Schools
- General offices
- Retail stores

Texture

The manufacturing process for cast ceiling panels creates natural, subtle texture variations, which is a distinguishing feature of these products. Because of potential variances between production dates, we recommend ordering and installing cast products by production date code.

Footnotes

1. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.

2. LR values are shown as averages.

3. Formaldehyde VOC Classification. Classified as formaldehyde-free according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).

4. For details, see the Sustainability selector.

5. Panel face and back surfaces are treated with USG's superior performing, patented, broad-spectrum antimicrobial treatment. This standard formulation inhibits and retards the growth of mold/ mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. Treated panels achieved a 10 rating, signifying "no mold growth", when tested and evaluated per ASTM D3273-00 and D3274-95). For details, see *Ceiling Systems Warranties and Limitations* (SC2102) and *ClimaPlus Ceilings Certification of Performance* (SC2451).

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Thermal resistance

R-16 for CLEAN ROOM Class 100 and 10M-100M Panels
R-0.44 for SHEETROCK brand lay-in ceiling panel.

Maximum backloading

See Warranty for details.
Maintenance
Can be cleaned easily with a damp sponge, mild detergent and water. Do not use acetate, ammonia, or highly concentrated chlorine, bromide or other harsh chemicals.

Humidity resistance

Tested by 48-hour cycles of 90% and 25% relative humidity repeated continuously for 24 days with no delamination.

Footnotes

1. NRC rating for SHEETROCK brand CLEAN ROOM CLIMAPLUS lay-in ceiling panel and CLEAN ROOM CLIMAPLUS Class 100 is .10. USG does not consider a ceiling panel to be acoustically rated if NRC is less than .50
2. LR values are shown as averages.
3. For details, see the Sustainability selector.
4. Not UL Classified for acoustics.
5. Field-cut edges of CLEAN ROOM panels must be sealed with white latex paint, shellac, or a mixture of 50% water and 50% water-soluble glue.
6. Clean-room-rated applications require a suspension system with gas-vented tee flanges such as DONN CE.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Fine-textured panel

Indoor Environmental Quality

- *CLIMAPLUS*™ AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria.
- Classified as low-formaldehyde according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- A variety of face scores create the illusion of a smaller-scaled ceiling system without compromising accessibility.
- Solid NRC performance of .70 meets general office acoustical needs for sound absorption.
- *CLIMAPLUS* 30-year lifetime system warranty to withstand temperature and humidity conditions up to 104 °F (40 °C)/95% relative humidity without visible sag when used with a USG Donn® brand suspension system.
- Panel used in Renditions™ face-routed ceiling systems (see IC327).

Applications

- Boutiques
- Schools
- Reception lobbies
- Transportation terminals

 See Warranty for details.
Maintenance
 Can be cleaned easily with a soft brush or vacuum.

Texture
 The manufacturing process for cast ceiling panels creates natural, subtle texture variations, which is a distinguishing feature of these products. Because of potential variances between production dates, we recommend ordering and installing cast products by production date code.

Footnotes
 1. LR values are shown as averages.
 2. Formaldehyde VOC Classification. Classified as formaldehyde-free according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).
 3. For details, see the Sustainability selector.
 4. Contact USG for adhesive recommendations for 12"x12" glue-up applications.
 5. Not UL Classified for acoustics.

Safety First!
 Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Texture
The manufacturing process for cast ceiling panels creates natural, subtle texture variations, which is a distinguishing feature of these products. Because of potential variances between production dates, we recommend ordering and installing cast products by production date code.

Footnotes
1. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.
2. LR values are shown as averages.
3. Formaldehyde VOC Classification. Classified as formaldehyde-free according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).
4. For details, see the Sustainability selector.

5. Panel face and back surfaces are treated with USG's superior performing, patented, broad-spectrum antimicrobial treatment. This standard formulation inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. Treated panels achieved a 10 rating, signifying "no mold growth", when tested and evaluated per ASTM D3273-00 and D3274-95. For details, see *Ceiling Systems Warranties and Limitations* (SC2102) and *ClimaPlus Ceilings Certification of Performance* (SC2451).

Safety First!
Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Heavily textured panel

Indoor Environmental Quality

- *CLIMAPLUS™* Superior Performance: Achieves “no growth” 10 rating per ASTM mold/mildew tests.
- Classified as formaldehyde-free according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- Uniquely textured cast product with durable surface that resists scrapes commonly caused by accessing the ceiling plenum.
- Integral color masks nicks and scratches and enhances lifelong panel appearance.
- *CLIMAPLUS* 15-year system warranty to withstand conditions up to 104 °F (40 °C)/90% relative humidity without visible sag when used with a USG *DONN®* brand suspension system.

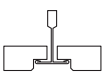

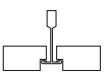

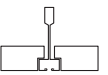

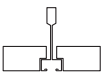

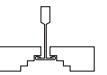

Applications

- Conference and lobby areas
- Department stores
- Entertainment and gaming
- Executive offices
- Hotels
- Media centers
- Restaurants

Halcyon™ ClimaPlus™

Fine-textured panel

Features and Benefits

- Fine, monolithic texture.
- Light reflectance of LR .88 is part of an “indirect lighting” solution.
- Exceptional noise reduction with NRC values up to 1.00 to meet the demanding sound control needs of open-plan offices.
- Low-maintenance panels look new for years to come.
- *CLIMAPLUS™* 15-year warranty to withstand conditions up to 104 °F (40 °C)/95% relative humidity without visible sag when used with a USG *DOWN®* brand suspension system.
- Lightweight fiberglass basemat makes installation fast and easy.

Applications

- Offices with indirect lighting
- Open-plan offices
- Reception and lobby areas

ASTM E1264 classification
 Type IV, Form 1 and 2, Pattern E, G
ASTM E84 surface burning characteristics
 Class A
 Flame spread: 25
 Smoke developed: 25
Weight
 .96 lb./sq. ft.
Thermal resistance
 R-2.2
Maximum backloading
 See Warranty for details.
Maintenance
 Can be cleaned easily with a soft brush or vacuum.

Scrubability
 Using the Gardner Scrubbability Test, 150 scrub cycles without surface break (ASTM D2486).
Surface scratch
 No visual damage by a metal shim of up to 20 mils using a surface scratch test.
Edge damage resistance
 Weight loss not to exceed 25-35% using the Friability Tests per ASTM C367. Panel edge should withstand compression of a 1/4" blunt pin for at least 100 lbs. per square inch. Independently verified performance test results available upon request.

Water resistance
 Absorption of 1,660 gm/m² per Cobb test (T 441 om-84)
Footnotes
 1. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.
 2. LR values are shown as averages.
 3. Formaldehyde VOC Classification. Classified as low-formaldehyde according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).

4. For details, see the Sustainability selector.
 5. Panel face and back surfaces treated with a patented, broad-spectrum antimicrobial standard formulation that inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. For details, see *Ceiling Systems Warranties and Limitations (SC2102)* and *CLIMA PLUS Ceilings Certification of Performance (SC2451)*.

Safety First!
 Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Millennia™ ClimaPlus™

Fine-textured panel

Indoor Environmental Quality

- *CLIMAPLUS*™ AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria.
- Classified as low-formaldehyde according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- Market's fastest-installing fine-textured ceiling is an economical alternative to face-laminated panels.
- NRC meets general office acoustical needs for sound absorption.
- *CLIMAPLUS* 30-year lifetime system warranty to withstand conditions up to 104 °F (40 °C)/ 95% relative humidity without visible sag when used with a USG Donn® brand suspension system.
- Panel used in Renditions™ face-routed ceiling systems (see IC327).

Applications

- Retail stores
- Hospitality
- Office and conference areas
- Party rooms
- Reception and lobby areas
- Transportation terminals

- CLIMAPLUS AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria.
- Inhibits or retards the growth of Gram-positive and Gram-negative bacteria.

ASTM E1264 classification
Type III, Form 2, Pattern CE
ASTM E84 surface burning characteristics
Class A
Flame spread: 25
Smoke developed: 10
Weight
0.72 lb./sq. ft.

Thermal resistance
R-1.4
Maximum backloading
See Warranty for details.
Maintenance
Can be cleaned easily with a soft brush or vacuum.

Footnotes
1. LR values are shown as averages.
2. Formaldehyde VOC Classification. Classified as low-formaldehyde according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).
3. For details, see the Sustainability selector.

4. Panel face and back surfaces treated with a patented, broad-spectrum antimicrobial standard formulation that inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. For details, see *Ceiling Systems Warranties and Limitations* (SC2102) and *CLIMAPLUS Ceilings Certification of Performance* (SC2451).

Product Information
See usg.com for the most up-to-date product information.
Safety First!
Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Pebbled[™] ClimaPlus[™]

Medium-textured panel

Indoor Environmental Quality

- CLIMAPLUS[™] AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria.
- Classified as low-formaldehyde according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- Economical, medium-textured ceiling panel has upscale appearance.
- CLIMAPLUS 15-year lifetime system warranty to withstand conditions up to 104 °F (40°C)/ 90% relative humidity without visible sag when used with a USG DONN[®] brand suspension system.

Applications

- Schools
- Corridors
- General offices
- Retail stores

Radar™ *ClimaPlus™* Illusion

Medium-textured panel

Indoor Environmental Quality

- *CLIMAPLUS™* AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria.
- Classified as low-formaldehyde according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- Non-directional pattern offers fast, efficient installation.
- Select items available in Standard colors.
- Face scores create illusion of a smaller-scaled ceiling system.
- *CLIMAPLUS* 15-year system warranty to withstand conditions up to 104 °F (40 °C)/90% relative humidity without visible sag when used with a USG *DONN®* brand suspension system.
- Optional *FIRECODE™* formulation designed to meet life safety codes.

Applications

- Schools
- Corridors
- General offices
- Retail stores

Texture
The manufacturing process for cast ceiling panels creates natural, subtle texture variations, which is a distinguishing feature of these products. Because of potential variances between production dates, we recommend ordering and installing cast products by production date code.

Footnotes
1. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.
2. LR values are shown as averages.
3. To highlight the unique texture of SANDRIFIT CLIMAPLUS panels, choose light colors. See Colors selector for more information.
4. Formaldehyde VOC Classification. Classified as formaldehyde-free according to standards established by the Collaborative for High-Performance Schools (CHPS), the State of Washington, the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE), and the American National Standards Institute (ANSI).

5. For details, see the Sustainability selector.
6. Panel face and back surfaces are treated with USG's superior performing, patented, broad-spectrum antimicrobial treatment. This standard formulation inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. Treated panels achieved a 10 rating, signifying "no mold growth", when tested and evaluated per ASTM D3273-00 and D3274-95). For details, see *Ceiling Systems Warranties and Limitations (SC2102)* and *ClimaPlus Ceilings Certification of Performance (SC2451)*.

Safety First!
Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Thermal resistance
1/2" = up to R-0.45
Maximum backloading
See Warranty for details.
Maintenance
Can be cleaned easily with a damp sponge. Use mild detergent and water – do not use acetate, ammonia or high concentration of chlorine, bromide or other harsh chemicals.

Humidity resistance
Tested by 48-hour cycles of 90% and 25% relative humidity repeated continuously for 24 days with no delamination.
U.S. Coast Guard acceptance
Approved for use on merchant ships.

Footnotes
1. NRC rating is .10. USG does not consider a ceiling panel to be acoustically rated if NRC is less than .50
2. LR values are shown as averages.
3. For details, see the Sustainability selector.
4. Field-cut edges of CLEAN ROOM panels must be sealed with white latex paint, shellac, or a mixture of 50% water and 50% water-soluble glue.
5. Clean-room-rated applications require a suspension system with gasketed tee flanges such as DONN CE.

Safety First!
Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

4. Panel face and back surfaces treated with a patented, broad-spectrum antimicrobial standard formulation that inhibits and retards the growth of mold/mildew, fungi, yeast, and odor/stain-causing Gram-positive and Gram-negative bacteria. For details, see *Ceiling Systems Warranties and Limitations* (SC2102) and *CLIMAPLUS Ceilings Certification of Performance* (SC2451).

Safety First!
Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Touchstone™ ClimaPlus™

Medium-textured panel

Indoor Environmental Quality

- *CLIMAPLUS*™ AntiMicrobial Treatment: Provides dual inhibition of mold/mildew and odor/stain-causing bacteria.
- Classified as low-formaldehyde according to standards established by CHPS, the State of Washington, ASHRAE, and ANSI.

Features and Benefits

- Panels are scuff- and abuse-resistant and can withstand day-to-day activity in high traffic areas.
- *CLIMAPLUS* 15-year system warranty to withstand conditions up to 104 °F (40 °C)/90% relative humidity without visible sag when used with a USG Down® brand suspension system.
- FIRECODE™ formulation designed to meet life safety codes.

Applications

- Schools
- General offices
- Retail stores

Substrate

Water-felted mineral fiber

Material

Double web aluminum tee with aluminum cap and stainless steel Quick-Release Clip.

Recycled content

90%. For details, see the Sustainability selector.

Installation

Must be installed in compliance with ASTM C636, CISCA, and standard industry practices.

Limitations

Severe Environmental Requirements: For exposed grids in non-fire-rated, extreme-humidity applications, this system is acceptable.

ICBO Evaluation Report Compliance

See ICBO Evaluation Service, Inc., Evaluation Report No. 2244 for allowable values and/or conditions of use concerning material presented in this document, as it is subject to re-examination, revision, and possible cancellation.

L.A. Research Report Compliance

Down brand suspension systems manufactured by USG Interiors, Inc., have been reviewed and are approved by listing in one or more of the following L.A. Research Report numbers: 22179, 23451, 24095.

ASTM C635 Standard for Load Compliance

This system meets or exceeds UL load compliance specifications per ASTM C635. Main tees will not deflect more than 1/8" over a 48" span (or (L/360) in Light Duty, Intermediate Duty or Heavy Duty categories.

Footnotes

1. Load test data shows uniform load in lbs./LF based on simple span tests in accordance with ASTM C635 deflection limit on L/360.
2. For detailing and module loading, request AC274QRC.
3. For more information on moldings, see Perimeter Interface selector.
4. Panels must be specified to be field-cut to size and field-revealed to provide as wide a lay-on edge as possible.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

**LIFETIME
LIMITED
WARRANTY**

Features and Benefits

- Non-corrosive aluminum 15/16" exposed grid system ideal for high-humidity environments or wet-cleaned areas.
- Aluminum components can be used in non-magnetic environments and meet USDA/FSIS requirements.
- Patented QUICK-RELEASE™ cross tees are easy to remove without tools and help decrease renovation costs.
- Cross tees with override ends resist twisting and give a professionally finished look with no exposed edges.
- Available in Flat White.
- Lifetime limited warranty when used with USG ceiling panels ensures owner satisfaction.

Applications

- Food processing areas
- High-humidity areas
- Light-duty applications
- Magnetic-free zones
- MRI rooms

- System meets or exceeds UL load compliance specifications per ASTM C635.

Recycled content
 25%. For details, see the Sustainability selector.

Installation
 Must be installed in compliance with ASTM C636, CISCA, and standard industry practices.

Limitations
 Severe Environmental Requirements: For exposed grids in non-fire-rated high-humidity applications, use aluminum or ZXLA™ suspension systems. For exterior applications, suspension should be reviewed by a structural engineer.

ICBO Evaluation Report Compliance
 See ICBO Evaluation Service, Inc., Evaluation Report No. 5636 for allowable values and/or conditions of use concerning material presented in this document, as it is subject to re-examination, revision, and possible cancellation.

L.A. Research Report Compliance
 Donn brand suspension systems manufactured by USG Interiors, Inc. have been reviewed and are approved by listing in one or more of the following L.A. Research Report numbers: 22179, 23451, 24095.

ASTM C635 Standard for Load Compliance
 This system meets or exceeds UL load compliance specifications per ASTM C635. Main tees will not deflect more than 1/8" over a 48" span (or (L/360) in Light Duty, Intermediate Duty or Heavy Duty categories.

Testing
 Particulate Test and Ceiling Integrity Tests per Federal Standard 209(e) are available from Technical Service.

Footnotes

1. Load test data shows uniform load in lbs./LF based on simple span tests in accordance with ASTM C635 deflection limit on L/360.
2. Do not use standard lay-in light fixtures with this system.
3. HEPA filters must be supported at all four corners of grid module.
4. For detailing and module loading, please request AC3128.
5. For more information on moldings, see Perimeter Interface selector.
6. Panels must be field-cut to size at the perimeter.

Safety First!
 Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

**LIFETIME
LIMITED
WARRANTY**

Features and Benefits

- 1-1/2" exposed, gasketed heavy-duty grid system. Designed for controlled-environment rooms that require a clean, particulate-free, sealed ceiling system.
- Hot-dipped galvanized body with enamel paint finish provides unequalled corrosion protection.
- Certified for Class 100 clean room environment per Federal Standard 209(e).
- Meets or exceeds all national code requirements, including seismic.
- Heavy-duty 1-1/2" face grid supports clean room HEPA filters and lights.
- Factory-applied closed-cell foam gaskets eliminate labor-intensive field application.
- Patented stainless steel Quick-Release™ cross tees simplify installation and can be removed without tools.

Applications

- Controlled environments
- Hospitals
- Food processing areas
- Clean rooms to Class 100

- System meets or exceeds UL load compliance specifications per ASTM C635.

Centricitee™ DXT/DXLT

Features and Benefits

- Narrow-faced 9/16" exposed grid offers subtle appearance.
- Patented panel-centering device allows use of standard square edge panels.
- Cross tees with override ends resist twisting and ensure a finished look with no exposed steel edges.
- Meets or exceeds all national code requirements, including seismic and fire-rated assemblies up to 2 hours. Design flexibility helps meet life safety codes.
- Patented Quick-Release™ cross tees are easy to remove without tools and help decrease renovation costs.
- Optional integrated air diffuser provides clean HVAC interface.
- Excellent color selection coordinates with USG ceiling panels.
- Lifetime limited warranty when used with USG ceiling panels.
- Hot-dipped galvanized steel body inhibits red rust.

Applications

- Interior general-use areas.
- Fire-rated interior general-use areas.

- System meets or exceeds UL load compliance specifications per ASTM C635.

Material
 Double-web hot-dipped galvanized steel body; steel cap finished with four-step protective coating.
Recycled content
 25 percent. For details, see the Sustainability selector.
Installation
 Must be installed in compliance with ASTM C636, CISCA or standard industry practices, within all applicable code requirements. See UL Fire Resistance Directory for rated assembly details.

Limitations
 Severe Environmental Requirements: Panels in exposed grids in non-fire-rated, high-humidity applications: use all-aluminum AX™ or ZXLA™ painted HDG suspension systems with aluminum cap. Panels in exposed grids in fire-rated, high-humidity applications: use ZXLA suspension systems. For all exterior applications, suspension should be reviewed by a structural engineer.
ICBO Evaluation Report Compliance
 See ICBO Evaluation Service, Inc., Evaluation Report No. 2244 for allowable values and/or conditions of use. All reports are subject to re-examination, revision and possible cancellation.

L.A. Research Report Compliance
 DOWN brand suspension systems manufactured by USG Interiors, Inc., have been reviewed and are approved by listing in one or more of the following L.A. Research Report numbers: 22179, 23451, 24095.
ASTM C635 Standard for Load Compliance
 System meets or exceeds UL load compliance specifications per ASTM C635. Main tees will not deflect more than 1/8" over 48" span (or L/360) in Light Duty, Intermediate Duty or Heavy Duty categories. See UL load label on carton.
Footnotes
 1. All DX/DXL main-tee and cross-tee connections meet IBC requirements for tension and compression strength.

2. Load test data shows uniform load in lbs./LF based on simple span tests in accordance with ASTM C635 deflection limit of L/360. For detailing and module loading, request AC269QRC.
 3. UL fire-rated listing, labeling and follow-up applies only to fire-rated components.
 4. DX color program for imperial only. Consult Customer Service for colors of metric tees.
 5. Non-fire-rated only.
 6. Cross-tee hole punch spacings also available for 20" and 30" modules.
 7. Available in metric; add "ME" to Item No. Consult Customer Service for colors of metric tees.
 8. DX cross tees available in additional sizes and lengths. Non-fire-rated applications may mix DX and DXL parts.

9. For moldings information, see Perimeter Interface selector.
 10. Panels must be specified to be field-cut, field-revealed and to provide widest possible lay-on edge.
 11. For DXL, channel moldings are also acceptable in some designs. Check UL Fire Resistance Directory for molding options.
Safety First!
 Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Report Compliance

See ICBO Evaluation Service, Inc., Evaluation Report No. 5636 for allowable values and/or conditions of use concerning material presented in this document, as it is subject to re-examination, revision, and possible cancellation.

ASTM C635 Standard for Load Compliance

This system meets or exceeds UL load compliance specifications per ASTM C635. Main tees will not deflect more than 1/8" over a 48" span (or (L/360) in Light Duty, Intermediate Duty or Heavy Duty categories.

Footnotes

1. Load test data shows uniform load in lbs./LF based on simple span tests in accordance with ASTM C635 deflection limit on L/360.
2. Cross-tee hole-punch spacings available for 24" and 48" modules.
3. Where needed, perimeter panels are field-cut to fit.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

**LIFETIME
LIMITED
WARRANTY**

Features and Benefits

- 15/16" Type 316 stainless steel grid system.
- Resistant to direct and indirect contact with many corrosive agents. Superior to Type 304.
- Stainless steel QUICK-RELEASE™ clips on cross tee ends provide plug-in, positive-lock insertion for quick installation and easy removal without tools.
- Non-magnetic.
- Cross tees with override ends resist twisting and give a professionally finished appearance.
- Meets USDA/FSIS requirements.
- Cap material is protected with removable PVC coating, reducing post-construction cleaning.
- Lifetime limited warranty.

Applications

- Food processing areas
- Industrial applications
- Laboratories

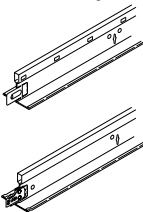

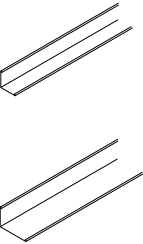

- System meets or exceeds UL load compliance specifications per ASTM C635.

Color

Contact your Customer Service representative for color requests.

Material

Double-web hot-dipped galvanized steel body; steel cap finished with four-step protective coating.

Recycled content

25%. For details, see the Sustainability selector.

Installation

Must be installed in compliance with ASTM C636, CISCA, and standard industry practices.

Limitations

Severe Environmental Requirements: For exposed grids in non-fire-rated, high-humidity applications, use aluminum or ZXLA™ suspension systems. For exterior applications, suspension should be reviewed by a structural engineer.

ICBO Evaluation

Report Compliance

See ICBO Evaluation Service, Inc., Evaluation Report No. 5636 for allowable values and/or conditions of use concerning material presented in this document, as it is subject to re-examination, revision, and possible cancellation.

L.A. Research

Report Compliance

DOWN brand suspension systems manufactured by USG Interiors, Inc., have been reviewed and are approved by listing in one or more of the following L.A. Research Report numbers: 22179, 23451, 24095.

ASTM C635 Standard

for Load Compliance

This system meets or exceeds UL load compliance specifications per ASTM C635. Main tees will not deflect more than 1/8" over a 48" span (or (L/360) in Light Duty, Intermediate Duty or Heavy Duty categories.

Footnotes

1. Load test data shows uniform load in lbs./LF based on simple span tests in accordance with ASTM C635 deflection limit on L/360.
2. For detailing and module loading, request AC3002QRC.
3. For more information on moldings, see Perimeter Interface selector.
4. Panels must be field-cut to size at the perimeter.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

**LIFETIME
LIMITED
WARRANTY**

Features and Benefits

- 1-1/2" exposed grid system. Design alternative for high-bay areas and large panel modules.
- Cross tees with override ends resist twisting and give a professionally finished look with no exposed steel edges.
- Meets or exceeds all national code requirements, including seismic. Design flexibility helps meet life safety codes.
- Patented Quick-Release™ cross tees are easy to remove without tools and help decrease renovation costs.
- Lifetime limited warranty when used with USG ceiling panels ensures owner satisfaction.
- Hot-dipped galvanized steel body inhibits red rust.

Applications

- Interior general use areas
- High-bay areas
- Large-module ceilings

- System meets or exceeds UL load compliance specifications per ASTM C635.

Fineline® DXF/DXLF

Features and Benefits

- Narrow-profile, slotted grid system with 1/4" reveal provides streamlined appearance.
- 1/4" slot accommodates partition attachments and pendant-mounted light fixtures.
- Mitered intersections offer a clean, tailored appearance.
- Meets or exceeds all national code requirements, including seismic and fire-rated assemblies up to 1 hour.
- Optional air diffuser provides clean, uninterrupted ceiling plane.
- Accepts Celebration™ metal ceiling panels for ceiling area accents without changing grid system.
- Hot-dipped galvanized steel body inhibits red rust.

Applications

- All interior general use areas
- Fire-rated, interior general use areas

- System meets or exceeds UL load compliance specifications per ASTM C635.

**LIFETIME
LIMITED
WARRANTY**

Features and Benefits

- 15/16" exposed, hot-dipped galvanized grid system with aluminum cap, ideal for use in extreme environments.
- Polyester paint finish and stainless steel clip provides unequalled corrosion protection.
- Meets or exceeds all national code requirements, including seismic and fire-rated assemblies up to 2 hours. Design flexibility helps meet life safety codes.
- Aluminum-capped grid system, suitable for use in food processing areas, meets USDA/FSIS requirements.
- Patented QUICK-RELEASE™ cross tees are easy to remove without tools and help decrease renovation costs.
- Intermediate- and heavy-duty assemblies provide design flexibility.
- Lifetime limited warranty when used with USG ceiling panels ensures owner satisfaction.

Applications

- Exterior soffits
- Fire-rated service environments
- Industrial applications

- System meets or exceeds UL load compliance specifications per ASTM C635.

Environmental Statement

Visit the USG Sustainable Ceilings Resource Center at sustainableceilings.com

Integrity, dependability and innovation are the standards by which USG operates. We believe that health, safety and environmental well-being are compatible with economic health. We have a longstanding commitment to our employees, our customers and our communities to:

- Provide product and manufacturing solutions that reduce environmental impact
- Eliminate manufacturing waste at our plants
- Use recycled materials in product formulation and development

Reducing Environmental Impact

As a manufacturer, we are dedicated to safeguarding the environment. USG has a solid history of environmental responsibility and is constantly seeking environmentally sound products and manufacturing solutions.

Environmentally friendly alternatives

United States Gypsum Company's FIBEROCK® brand AQUA-TOUGH™ floor underlayment not only incorporates a patented technology that delivers outstanding performance benefits, but also offers an environmentally friendly alternative to conventional wood-based underlayments. Produced on a new manufacturing line at our Gypsum, Ohio plant, FIBEROCK Brand Underlayment is made from 100 percent recycled gypsum and 100 percent recycled cellulose fibers, recycled from scraps of cardboard box manufacturing. This plant also produces FIBEROCK® brand AQUA-TOUGH™ sheathing using the same technology.

In recognition of these achievements, United States Gypsum Company has earned independent certification from Scientific Certification Systems (SCS).

Using recaptured gypsum

Recaptured gypsum, also called synthetic gypsum, is a byproduct of several processes including flue gas desulfurization (FGD), which reduces acid rain by removing sulfur dioxide from the emissions of fossil-fuel-burning power plants. Our use of recaptured gypsum reduces the amount of this material that gets disposed in landfills. Wallboard made from recaptured gypsum offers the same properties and benefits as wallboard made from mined gypsum rock.

United States Gypsum Company has used recaptured gypsum to manufacture wallboard since 1974. Currently, we produce 24 percent (2.3 million tons per year) of our total production with recaptured gypsum cores. Nearly 50 percent of our wallboard plants use recaptured gypsum to some degree.

Eliminating Manufacturing Waste

United States Gypsum Company and USG Interiors, Inc. have used environmental control equipment since before the Clean Air Act was passed in 1969. Our plants consume clean fuels, such as low-sulfur oil and natural gas, wherever possible. Water treatment equipment installed at our paper mills and ceiling panel plants recycles water and reduces effluent discharges into municipal treatment systems.

Recycling heat

USG plants also conserve energy by recycling heat. Heat-exchange processes are used throughout our manufacturing operations to conserve energy and maximize efficiency. For example, we use heat from thermal process discharges to warm other parts of the plants.

Reusing waste

Our gypsum plants recycle plant waste back into the manufacturing process. U.S. Gypsum wallboard plants have a 95 percent recovery rate, and part of the remaining 5 percent is repurposed as protective material to support stacks of gypsum panels. Ceiling panels that are chipped or broken during manufacturing are also recycled and then returned to the process.

Using Recycled Materials

The foundation of United States Gypsum Company is built on gypsum rock, which we complement with alternative resources, such as recycled industrial material, post-consumer waste and renewable agricultural sources. Incorporating these alternatives helps to preserve natural resources, support clean air and ease disposal problems for public utilities and other companies.

Reusing byproducts

- United States Gypsum Company has used recaptured gypsum to manufacture wallboard for more than 25 years. (See recaptured gypsum section for more information).
- United States Gypsum Company uses fly ash, a byproduct of coal-fired utility plants, in the core of its cement board products. Lignin sulfonate, a byproduct from the paper industry, is also part of the formulation for gypsum wallboard.
- USG Interiors, Inc. uses slag, a byproduct of steel manufacturing, in manufacturing mineral wool for acoustical ceiling panels.
- USG Interiors, Inc. and U.S. Gypsum use post-industrial wastepaper for its acoustical ceiling panels and wallboard products.

Reusing discarded material

- Since the 1960s, United States Gypsum Company has made its own wallboard paper from 100 percent recycled paper including newspapers, phone books, corrugated cartons and cardboard cuttings.
- USG Interiors, Inc. grid can be recycled completely by remelting and salvaging the metal. Twenty-five percent of the material used in our steel fabrication plants is recycled. We also use waste newspaper to manufacture acoustical ceiling panels.

Reusing renewable agricultural sources

- Our plants use corn and wheat starches as binders in the manufacture of drywall and ceiling products.
- These agricultural sources can be harvested and replanted in a continuous cycle of renewal.

Leadership

USG supports environmental initiatives and is involved with a variety of environmental organizations.

U.S. Green Building Council

In 1993, USG helped establish the U.S. Green Building Council (USGBC), a diverse coalition of principal groups involved in the building industry. The council's mission is to promote buildings that are environmentally responsible, profitable and healthy places to live and work.

LEED Program

Developed by the USGBC, the Leadership in Energy and Environmental Design (LEED) program created a building rating system to evaluate environmental performance from a "whole building" perspective, providing a standard for "green building." Credits are earned for satisfying specific building criteria. USG endorses this program by contributing environmentally sound products that help a builder earn credits toward a green building.

National Association of Home Builders

USG is involved in construction recycling demonstration projects with the National Association of Home Builders (NAHB).

Acoustical Ceilings

Manufacturer's Guide Specifications

Section 09511— Acoustical Panel Ceilings

1: General

**1.01
Description of Work**

- A.** Related work specified elsewhere:
 - 1. Insulation: -Section _____.
 - 2. Mechanical equipment: Section _____.
 - 3. Electrical: -Section _____.
 - 4. Gypsum board systems: -Section _____.
 - 5. Ceiling suspension systems: -Section _____.
- B.** Work installed but furnished under other sections (include applicable requirements):
Sound masking systems
Section 16727
(Contact Lencore Acoustics for a complete specification)
- C.** Work furnished but installed under other sections: (include applicable requirements):

**1.02
System Description**

Standard Panels: -Suspended (New Fire-Rated) ceiling system consisting of acoustical panel ceiling suspension system. System shall be rated NRC () in accordance with ASTM C423 and CAC () in accordance with ASTM test method E1414 and classification E4131 as tested by an independent agency.

Firecode™ formulation panels: Suspended (non-fire-rated) (fire-rated) ceiling system consisting of acoustical panel ceiling suspension system. System shall be rated NRC () in accordance with ASTM C423 and CAC () in accordance with ASTM test method E1414 and classification E4131 as tested or witnessed by an independent agency.

CAC: Ceiling Attenuation Class.
LR: Light Reflectance coefficient.
NRC: Noise Reduction Coefficient.

Recycled Content: Average percentage based on weight of component materials. Material recovered or diverted from the solid waste stream, either during the manufacturing process (pre-consumer) or after consumer use (post-consumer).

Sound Masking: Ceiling system to (include) (not include) Lencore sound masking with appropriate system customization to accommodate zoned masking and/or paging. (See Sound Masking System, section 16727.)

**1.03
Delivery and Storage
of Materials**

- A.** All materials shall be delivered in their original unopened packages and stored in an enclosed shelter providing protection from damage and exposure to the elements.
- B.** Storage time of materials at the jobsite should be as short as possible, and environmental conditions should be as near as possible to those specified for occupancy (see no. 1.04 below). Excess humidity during storage can cause expansion of material and possible warp, sag, or poor fit after installation. Chemical changes in the mat and/or coatings can be aggravated by excess humidity and cause discoloration during storage, even in unopened cartons. Cartons should be removed from pallets and stringers to prevent distortion of material. Long-term (6-12 months) storage under uncontrolled environmental conditions should be avoided.
- C.** Damaged or deteriorated materials should be removed from the premises. Immediately before installation, to stabilize tile and panels, store them at a location where temperature and humidity conditions duplicate those ambient during installation and anticipated for occupancy.

**1.04
Environmental
Conditions**

- A.** Installation of acoustical panels shall not begin until building is enclosed, permanent heating and cooling equipment is in operation, and residual moisture from plaster, concrete, or terrazzo work has dissipated. *CLIMAPLUS™* acoustical ceilings and *CLIMAPLUS* Ultra acoustical ceilings can be installed prior to building enclosure and permanent heating and cooling equipment is in operation.

Manufacturer's Guide Specifications

- B.** Do not use ceiling panels in extreme or continuous high humidity, or areas exposed directly to weather or water. Ceiling panels are sized and designed for use within the standard occupancy range of temperature and humidity, 65-85 °F (18-29 °C), no more than 70% RH (relative humidity). Humidity can greatly affect product dimensional stability and sag resistance. Sag can become noticeable during periods of high humidity lasting only a few hours. *CLIMAPLUS* ceilings and *CLIMAPLUS* Ultra ceilings, if used with Donn® Brand Suspension Systems, can withstand temperatures up to 90-104 °F (32-40 °C) and relative humidity 90%-100% RH. See USG Interiors Inc. for standard Warranty information.
- C.** Allow time for dimensional changes in ceiling panels stored at temperature/humidity conditions well outside of those recommended for service. With increases in temperature/humidity, these products expand (up to 1/64 in./ft. (4.3 mm/m) at 85 °F (29 °C)/90% RH) and may not fit into a fixed grid. Conversely, with decreases, these products will be undersize, but expand to normal when standard ambient conditions return.
- D.** For some pattern edge details, if perimeter panels must be cut smaller, the cut edge must be field-rabbetted, or the wall angle must be lowered by (1/4") (3/8") (Reveal Depth).

**1.05
Quality Assurance**

- A.** Single Source Responsibility: To obtain Lifetime ceiling system warranty, 15-year ceiling system warranty, color match or ceiling panel and suspension system compatibility, all acoustical panel and suspension system components shall be produced and supplied by one manufacturer. Materials supplied by more than one manufacturer are not acceptable.
- B.** Subcontractor qualifications: Installer shall have successful experience in the installation of suspended ceiling systems on projects with requirements similar to requirements specified.
- C.** Requirements of regulatory agencies: Codes and regulations of authorities having jurisdiction.
- D.** Source quality control:
 1. Test reports: Manufacturer will provide test certification for minimum requirements as tested in accordance with applicable industry standards and/or to meet performance standards specified by various agencies.
 2. Changes from system: System performance following any substitution of materials or change in assembly design must be certified by the manufacturer.

**1.06
References**

- A.** ASTM C635 and C636: Manufacturing of metal suspension systems and Installation of Suspended Ceilings.
- B.** Underwriters Laboratories, Inc.: Fire Resistance Directory, Acoustical Materials (BYIT).
- C.** ASTM E84: Surface Burning Characteristics Classification.
- D.** ASTM E119: Fire Tests of Building Construction and Materials.
- E.** ASTM C423: Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
- F.** CISCA Ceiling Systems Installation Handbook.
- G.** ASTM E1414-00: For CAC Testing

**1.07
Submittals**

- A.** Samples: Submit representative sample of color and finish of all exposed materials.
- B.** Shop drawings:
 1. Reflected ceiling plans: Contractors shall submit a layout arrangement of ceiling design, dimensions and locations of related integrated lighting and air distribution components.
 2. Installation drawings: Detail complete installation including suspension system, installation of related lighting and air distribution components, access requirements, sound absorption requirements, and fire rating requirements when applicable.
 3. Manufacturer's data: Submit manufacturer's catalog cuts or standard drawings showing details of system with project conditions clearly identified and manufacturer's recommended installation instructions.
 4. Maintenance materials: Submit ____ (one) percent of amount of ceiling components installed.

Acoustical Ceilings

Manufacturer's Guide Specifications

- C. Warranty: Manufacturer's standard warranty for extent of conditions allowable and duration of warranty.
- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each acoustical panel ceiling and suspension system.
 1. UL Acoustical Compliance: For acoustical performance, each carton of material must carry Underwriters Laboratories certification for CAC and NRC.
 2. UL Suspension System Load Compliance: Manufacturer must certify that the metal suspension system is UL Classified to be load compliant per ASTM C635. For load compliance, each carton of main tees must carry Underwriters Laboratories certification for load compliance.

**1.08
Project Conditions**

- A. Existing conditions: (include specific alteration work requirements for project).
- B. Environmental requirements for interior installation: Building shall be enclosed with windows and exterior doors in place and glazed, and roof watertight before installation of ceiling system and related ceiling components. Climatic condition range of 60-85 °F (16-29 °C) with a max 75% RH. *CLIMAPLUS* and *CLIMAPLUS* Ultra ceilings used with Donn Brand Suspension Systems can be used when building is not enclosed and in higher temperature, relative humidity range.
- C. Coordination with other work:
 1. Mechanical work: Ductwork above ceiling shall be complete, and permanent heating and cooling systems operating to climate conditions prior to installation of ceiling components.
 2. Electrical work: Installation of conduit above ceiling shall be complete before installation of ceiling components.
 3. Fire protection work: Fire protection lines and/or equipment occurring above ceiling shall be completed and tested before ceiling components are installed.
- D. Protection: Protect completed work above ceiling system from damage during installation of ceiling components.

2: Products

**2.01
Manufacturer**

- A. Ceiling panels as manufactured by USG Interiors, Inc., Ceilings Division, Chicago, Illinois, U.S.A.
- B. Sound masking, as manufactured by Lencore Acoustics Corp., Woodbury, New York, U.S.A.¹
- C. Fill in the following information for the product you want to specify (see Color Selector, SC1859, for color numbers):

Pattern Name	Item No.	Color No.	Plastic Coating ²	Sound Masking
			Yes/No	Yes/No

¹See sound masking specification at www.lencore.com

²Plastic coating only available on certain panels. See Literature or Sales Representative.

3: Execution

**3.01
Inspection**

- A. Examine areas to receive ceiling panels for conditions that will adversely affect installation. Provide written report of discrepancies.
- B. Do not start work until unsatisfactory conditions are corrected.
- C. Work to be concealed: Verify work above ceiling is complete and installed in manner that will not affect layout and installation of ceiling panels.
- D. Beginning of installation shall signify acceptance of conditions in areas to receive ceiling panels.
- E. Fire-rating requirements: Construction above fire-rated assembly shall meet requirements of UL Design specified in *2: Products*.

**3.02
Preparation**

- A. Field dimensions must be verified prior to installation.

Manufacturer's Guide Specifications

3.03 Installation

- A. Standard reference: Install ceiling panels and suspension system, including necessary hangers, grillage, splines, and other supporting hardware, in accordance with ASTM C636, CISCA Installation Sysds., (UL Design) and any applicable code requirement.
- B. Manufacturer's reference: Install ceiling panels in exposed grid systems, supported on all edges, in accordance with manufacturer's current printed recommendations.
- C. Drawing reference: Install ceiling panels in accordance with approved shop drawings.

3.04 Maintenance

- A. Cleaning: Panels can be cleaned easily with a soft brush, vacuum, or dry chemical sponge.
- B. Repainting: Spray a thinned, nonbridging vinyl-acrylic flat wall paint. The type of paint selected and the method of application can alter the acoustical performance and fire ratings of any acoustical product. Therefore, USG Interiors, Inc. cannot guarantee that the field-painted panels will match the published performance.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Manufacturer's Guide Specifications

3.02 Installation

- A. Field dimensions: Installer must verify actual field dimensions prior to installation.

3.03 Preparation

- A. Standard reference: Install in accordance with ASTM C636, CISCA installation standards, UL fire-rating classification, and any other applicable national or local code requirements.
- B. Manufacturer's reference: Install in accordance with manufacturer's current publications.
- C. Hanger wires:
 - 1. Spacing: Space hanger wires on main tees a maximum of 48" or 60" (1200 or 1500 mm) o.c. attaching hangers directly to structure above. A hanger wire shall occur directly adjacent to the fire expansion notch on every main tee, and as required per design requirements.
 - 2. Limitations: Do not support wires from mechanical and/or electrical equipment, piping, or other equipment occurring above ceiling.
 - 3. Fixtures at ceiling: Provide additional hanger wires where lighting fixtures and/or air supply and return units occur in ceiling.
- D. Allowable tolerances: Per ASTM C636.
- E. Hold-down clips: Install hold-down clips when FIRECODE™ formulation panels weigh less than 1.0 lb./sq. ft. (4.5 kg/m²)

3.04 Maintenance

- A. Cleaning: Remove panel material and perform any necessary cleaning maintenance with nonsolvent-based commercial cleaner.
- B. Immediately remove any corrosive substances or chemicals that would attack painted finishes (e.g., wallpaper adhesives).
- C. Touch up all minor scratches and spots, as acceptable, or replace damaged sections when touch-up is not permitted.
- D. Painting: Repainting of suspension members shall be with a high-quality solvent-based paint and applied as recommended by paint manufacturer.
- E. Removal of debris: Remove all debris resulting from work of this section.

Safety First!

Follow good safety and industrial hygiene practices during handling and installation of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.

Sound Test Data¹

Note: All sound testing is conducted at the USG Research CSL Acoustical Test Facility, which is certified under the NVLAP Voluntary Accreditation Program and under the UL Client Data Test Program.

1. Data on physical properties for sound control products were obtained by testing at recognized laboratories. Sound-test surfaces were painted. Procedures were according to:
 —ASTM C1477 for light reflectance (LR)
 —ASTM C423 for sound absorption (NRC)
 —ASTM 1414 for sound attenuation(CAC)
 2. Sound absorption test specimen mountings: B—adhesive application to gypsum board; D20—stapled to wood furring strips; E400 or E405—metal suspension system. Mountings are designations from ASTM Standard E795.
 3. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.
 4. Sound attenuation test specimen mountings, coded: (1st letter) Ad—Adhesive attachment, C—Continuous at partitions, I—Interrupted at partitions; (2nd letter) C—Concealed suspension system,

E—Exposed suspension system; (3rd or 4th letter)
 F—Flat splines, T—Tee splines, X—accessible feature; a—one layer 1-1/2" Thermafiber® sound attenuation fire blankets, laid on ceiling continuous; d—two layers 1-1/2" Thermafiber sound attenuation fire blankets, laid on ceiling in an 8-ft width centered over the partition; t—inverted-T plenum barrier of 3" Thermafiber sound attenuation fire blankets, centered above partition continuous.
 5. Shadowline (rabbeted) edge configuration.
 6. For current acoustical data, verify with 800.USG.4YOU.
 7. Minimal requirement under the U.L. acoustical compliance program.
 8. From recent test data as tested at USG Research and Technology Innovation Center.

Lencore Acoustics Sound Masking

Achieve Speech Privacy and Acoustical Comfort with Lencore Sound Masking

Acoustics are an important aspect of any design, whether to enhance productivity and comfort in office environments or comply with federal speech privacy regulations in healthcare and financial settings. To meet these demands, architects increasingly turn to sound masking to optimize the acoustical performance of a quality ceiling system.

From Worker Comfort to Legal Compliance

Sound masking provides a constant, random and unobtrusive background sound that effectively overrides sound not absorbed or blocked by ceiling panels, acoustical wall panels, carpeting, partitions and other design elements. In open-plan offices, sound masking reduces distractions from coworkers' conversations, meetings and speakerphones. In enclosed offices and spaces with wall and ceiling penetrations for lighting, HVAC and other systems, sound masking complements high-CAC ceiling panels by further reducing the amount of intelligible conversation that may reach others outside.

Even exceptionally quiet environments can benefit from sound masking. In these spaces, the faintest sounds—rustling papers, drawers opening and closing—can be distracting. Without ambient background sound, intermittent noise becomes intrusive.

Beyond reducing distraction and allowing people to speak in confidence, sound masking can help ensure compliance with privacy regulations. The Health Insurance Portability and Accountability Act (HIPAA) regulates the transmission of health information in electronic, paper and oral forms, while the Financial Services Modernization Act of 1999, also known as the Gramm-Leach-Bliley Act (GLBA), requires financial institutions to protect customer financial information from inadvertent disclosure. Both regulations include requirements that affected facilities adopt systems and procedures to prevent consultations with and about patients and customers from being overheard. Sound masking can help architects, specifiers and building owners and managers achieve compliance.

USG offers an extensive selection of acoustical ceiling panels with high NRC and CAC ratings, performance that can be further enhanced with Lencore sound masking:

	NRC	CAC ¹
ECLIPSE CLIMAPLUS	.70	35
FROST CLIMAPLUS	.70	38/40
HALCYON CLIMAPLUS	1.0	25
MARS CLIMAPLUS	.70	35
SANDRIFT CLIMAPLUS	.70	38
SUMMIT CLIMAPLUS	.70	38/40

The Lencore Advantage

Sound masking systems from Lencore Acoustics employ a unique design to provide even, uniform coverage throughout a space. Take a closer look at the comprehensive benefits of the high-quality Lencore Spectra® sound masking system.

- Performance. Masking is directed upward to create a reverse “cone of sound” that fills the plenum and filters down through the ceiling panels, preventing “hot” and “cold” spots common to other system types, such as direct-field and centrally controlled systems. Coverage from adjacent units overlaps, distributing even, uniform sound throughout the workspace.
- Flexibility. Lencore sound generating units hang above the ceiling system, where they won't interfere with ceiling renovations or have to be reconfigured if the layout of office furniture, workstations or partitions changes. Lencore systems support optional, integrated paging and music capabilities vastly superior to conventional systems, and individual and/or central controls are available.

- Savings. Each unit is hung on 15-ft. centers, providing 225 sq. ft. coverage – up to three times as much coverage as panel-mounted, direct-field and some centrally controlled sound masking units, significantly reducing equipment and labor costs.

Units operate on low-voltage power, with no special electrical requirements. Documented workplace productivity gains of 3-20 percent can provide a full return on investment in less than one year.

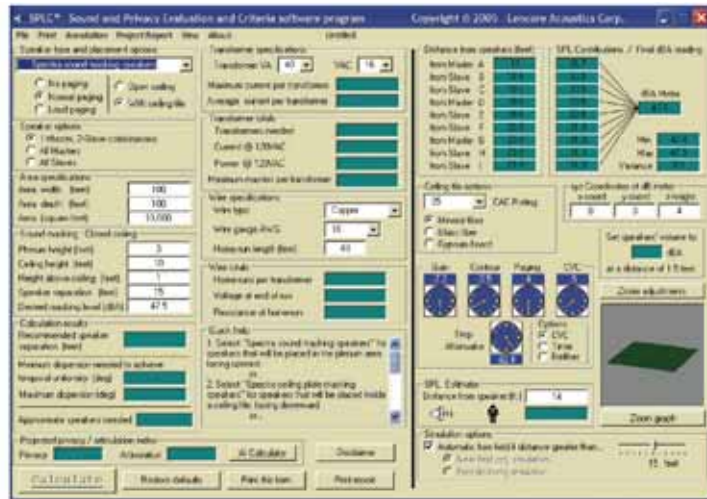

- Comfort. Ensuring that the sound generated is not distracting is the most nuanced aspect of sound masking, and where many other systems fail. Lencore technology creates digital, non-repeating masking cycles with the tightest masking variance (+/- ½ dBA) of any available system. These advantages ensure uniformity in masking and speech privacy levels, producing a sound preferred by 99 percent of listeners in competitor system comparisons.
- Quality. Lencore systems have a 30-year record of performance in the field, and many Spectra systems have been in use for 10+ years. All systems are made in the U.S. A., UL-listed and backed by a 10-year warranty from date of installation.
- Zero maintenance. No system maintenance or tuning is required after installation.

To learn more about how sound masking can enhance the sound control and speech privacy performance of a USG ceiling, visit Lencore Acoustics online at www.lencore.com. Local assistance is available from Lencore expert representatives in all 50 states to provide complete project services and support, from acoustical analysis through system installation and tuning.

Proof of Speech Privacy Levels

Lencore’s award-winning Sound and Privacy Evaluation and Criteria (SPEC™) software analyzes and compares the sound levels and speech privacy of a space (existing or in design) with a standard ceiling system and with a high-performance USG acoustical ceiling and Lencore sound masking.

Provided as a free service, Lencore representatives use SPEC to tailor a sound masking solution to your design and acoustical performance requirements. Upon installation, the facility owner or manager receives a PRIVACY INDEX REPORT™ fully documenting that the desired Articulation Index² has been attained.

1. Adding sound masking can be as effective as using a ceiling panel with a higher CAC rating, providing increased privacy between enclosed office spaces.
2. Speech privacy is measured per ASTM E1130, Standard Test Method for Objective Measurement of Speech Privacy in Open Offices Using Articulation Index, which classifies speech privacy levels as minimal, normal or confidential.

For lay-in acoustical panels and direct-hung acoustical tiles.

Visit the USG Seismic Ceilings Resource Center at www.seismicceilings.com

	IBC Category C ¹	IBC Category D, E, F ²	UBC 25-2 ³
Basic Connections, Perimeter, and Lateral Splay Bracing			
Minimum intersection strength limits @ MT / CT ⁴	60 lbs	180 lbs	180 lbs
Vertical hanger wire 12-gauge @ 4' o.c.	Required	Required	Required
Connection device from vertical wire to the structure above must sustain min 100 lbs	Not required	Required	Required
Main tee classifications ⁵	Intermediate- or heavy-duty	Heavy-duty	Intermediate- or heavy-duty ⁶
1 in 6 max plumb of vertical hanger wires	Required	Required	Required
Perimeter vertical hanger wires not more than 8" from wall	Not required unless molding < 7/8"	Required	Required
Grid end/wall clearance	Min 3/8"	Min 3/4"	Some clearance on two non-attached walls, if applicable
Perimeter closure (molding) width	Min 7/8" (or use perimeter wires)	Min 2"	Min 7/8"
Grid connection to perimeter attached on two adjacent walls	Not permitted	Required	Optional
Perimeter tee ends tied together at perimeters	Required	Required	Required
Horizontal restraint (splay wires or rigid bracing) within 2" of intersection and splayed 90° apart at 45° angles	Not required	Required ^{7,8}	Required ^{8,9}
Compression posts (struts) 12' o.c. in both directions, starting 6' from walls	Not required	Required ^{7,8}	Required ^{8,9}
Splay bracing connection strength 200 lbs or the design load, whichever is greater	Not required	Required	Required
Partition attachment	Allowed only if ceiling is able to move laterally	Bracing independent of ceiling splay bracing	Allowed with bracing
Seismic separation joint	Not required	Required for areas > 2,500 sq. ft. (or full height partition) ⁸	Not required
Rigid bracing for ceiling plane elevation changes	Not required	Required	Not required
Light Fixture Attachment			
Light fixture (all types) mechanically attached to grid per NEC 410-16 (two per fixture unless independently supported)	Required	Required	Required ⁸
– Surface-mounted fixtures attached to grid	Not required	Not required	Required (including safety wires to vertical wire or structure) ⁶
– Pendant-hung fixtures directly supported from structure with 9-gauge wire (or approved alternative)	Required	Required	Required
– Rigid lay-in or can light fixtures			
< 10 lbs – one wire to structure (may be slack)	Required	Required	Lower limit is 20 lbs.
10 to 56 lbs – two wires from housing to structure (may be slack)	Required	Required	Required – lower limit is 20 lbs.
> 56 lbs – supported directly to structure by approved hangers	Required	Required	Required
Service Applications			
Air terminals			
< 20 lbs – positively attached to grid	Required	Required	Required
20 to 56 lbs – positively attached to grid and two 12-gauge wires to structure (may be slack)	Required	Required	Required
> 56 lbs – directly supported to structure	Required	Required	Required
Sprinkler heads and other penetration clearance	Min 3/8" on all sides	Min 2" dia. opening or a swing joint	Not required
Cable trays and electrical conduit independently supported and braced	Not required	Required	Not required

Notes

The above information is correct to the best of our knowledge at the date of issuance. Because codes continue to evolve, check with a local official prior to designing and installing a ceiling system. This is only intended as a quick reference. A thorough understanding of IBC 2003 and UBC 25-2 is necessary when designing and installing ceiling suspension systems.

1. Refers to CISCA installation recommendations for zones 0-2 via ASCE 7-02. Max ceiling weight: 2.5 psf.
2. Refers to CISCA installation recommendations for zones 3-4 via ASCE 7-02.
3. UBC 25-2 continues to be the code adopted by the state of California.
4. All USG Down® brand ceiling suspension systems meet these requirements.
5. Per ASTM C635.

6. When intermediate-duty systems are used, No. 12-gauge hanger wires shall be attached to the suspension members within three inches of each corner of each fixture.
7. Required for ceilings larger than 1,000 square feet.
8. Where substantiating design calculations are not provided.
9. Seismic bracing standards generally apply to ceilings larger than 144 square feet.

General Notes

1. Hanger wire should be located between the main tee splice and the expansion relief notch and a maximum 48" o.c., or per the requirements of the specific UL design.
2. All 60" cross tees are to have hanger wires at their midpoint.
3. Assemblies are tested with the method and criteria established in Standard UL 263, also known as A2.1, ASTM E119 and NFPA 251.
4. Hold-down clips are required when fire-rated board weighs less than 1.0 lb./sq. ft.
5. % Fixtures column indicates 24" x 48" fixture only, unless noted. Check for suspension requirements.
6. Some designs pertain to DXL only. Contact UL Fire Resistance Directory and revisions to confirm all information listed in these tables.
7. DXLR and ZXLA are also listed by UL.
8. DXL has been used in many other industry fire tests and listed in reports such as the National Evaluation Reports, for example, NER-148 and NER-399 (wood truss constructions).
** Check UL Designs for deck options.

Lifetime (30-Year) Limited Warranty

All USG DONN® brand suspension systems, when used with any USG ceiling panels or tiles or SHEETROCK® brand gypsum lay-in ceiling panels, carry a lifetime (30-year) warranty that our products shall be free from manufacturing defects and that the suspension systems shall be free from the occurrence of 50% red rust.

USG ceiling panels and tiles with *CLIMAPLUS*™ performance are specially formulated to endure environments with up to 100% relative humidity and temperatures up to 104 °F. These panels carry a limited warranty against visible sag for up to 30 years when installed in a DONN suspension system.

Controlled laboratory tests have demonstrated the effectiveness of USG *CLIMAPLUS* mineral-fiber ceiling panels treated with a patented antimicrobial standard formulation that inhibits and retards the growth of mold/mildew, fungi, yeast and odor/stain causing Gram-positive and Gram-negative bacteria.¹ This formulation is a broad-spectrum antimicrobial treatment applied to panel face and back surfaces.

In addition, USG *CLIMAPLUS* Superior Performance ceiling panels (all ASTRO™ panels and tile, select ECLIPSE™ panels, and all cast-mineral-fiber *CLIMAPLUS* panels) treated with USG's high-performance, broad-spectrum antimicrobial surface formulation have shown superior performance when tested against untreated panels per ASTM D3273-00² and evaluated in accordance with the ASTM D3274-95³ rating scale.

After a 28-day incubation period, USG *CLIMAPLUS* Superior Performance ceiling panels tested in accordance with ASTM D3273-00 and evaluated per ASTM D3274-95 have achieved a 10 rating. This is the highest rating achievable and signifies "no growth."

CLIMAPLUS Superior Performance ceiling panels and tiles are the only standard ceilings products on the market with a limited lifetime (30-year) warranty against mold and mildew growth, subject to use under normal conditions. *CLIMAPLUS* Superior Performance products include:

- ASTRO *CLIMAPLUS* panels and tile
- BRIO™ *CLIMAPLUS* panels
- Select ECLIPSE *CLIMAPLUS* panels
- FRESCO™ *CLIMAPLUS* panels
- FROST™ *CLIMAPLUS* panels
- SANDRIFT™ *CLIMAPLUS* panels
- SUMMIT™ *CLIMAPLUS* panels

CLIMAPLUS Superior Performance products feature a USG-patented antimicrobial treatment that provides broad-spectrum control for mold/mildew, fungi, yeast, algae, and bacteria over the warranty period.

When installed in a DONN suspension system, these panels are guaranteed for the lifetime (30 years) of the product, subject to use under normal conditions, to inhibit or retard microbial growth on product treated surfaces that can result from high humidity conditions.

Continued mold inhibition cannot be assured if ceiling panels and tile with *CLIMAPLUS* Superior Performance are installed in or exposed to abnormal conditions. Abnormal conditions include chemical fumes, vibrations or moisture coming in direct contact with the ceiling, such as building leaks or condensation.

Notes

1. See SC2451 for a complete list of qualifying products.
2. Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.
3. Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Microbial (Fungal or Algal) Growth or Soil and Dirt Accumulation.

Warranties and Limitations

By “lifetime” we mean the useful life of the ceiling system, up to a maximum of 30 years.

In addition, these panels are warranted against visible sag.

The *CLIMAPLUS* warranty periods for these and other USG products and systems are as follows:

Warranties (Defects, Panel Sag, 50% Red Rust)	Ceiling Systems	Panel/Tile	Suspension System
		<i>CLIMAPLUS</i> Ultra Panels & Tile plus <i>DOWN</i> Suspension System	Lifetime 30 Years
	<i>CLIMAPLUS</i> Panels & Tile plus <i>DOWN</i> Suspension System	15 Years	Lifetime 30 Years
	All Other USG Ceiling Panels & Tile plus <i>DOWN</i> Suspension System	1 Year	Lifetime 30 Years
	USG Specialty Ceilings	1 year	—

	Individual Products	Panel/Tile	Suspension System
	<i>CLIMAPLUS</i> Ultra Panels & Tile	10 Years	—
	<i>CLIMAPLUS</i> Panels & Tile	10 Years	—
	All Other USG Ceiling Panels & Tile	1 Year	—
	<i>DOWN</i> Suspension Systems	—	10 Years

All warranties are subject to the following terms and conditions:

Who is covered? Except where stated otherwise on specific product warranties, all USG warranties cover the original owner of the building at the time of installation.

What will USG do? In the unlikely event of product performance failure, at our election USG will replace the goods or we will refund or credit an amount equal to the (original) purchase price of the goods within warranted conditions.

The building owner is responsible for all costs associated with removal and installation.

What does this warranty not cover? All ceiling products and systems must be installed and maintained in accordance with current USG written instructions and best industry practice, including the CISCA Handbook and ASTM C 636, “Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.” *SHEETROCK® brand gypsum panels used with the USG drywall suspension system are not covered.*

Also, you must observe the following:

- Care must be taken that the products are not damaged during delivery and while they are stored at the job site.
- The products must always be protected from vibration, direct contact with water including condensation, and chemical fumes, both before and after installation.
- These products cannot be used in exterior applications.

Except for *CLIMAPLUS* Superior Performance ceiling panels and tiles with USG’s patented anti-microbial treatment, the growth of mold is not covered by this warranty nor is it the responsibility of USG.

Damage that may occur from vibrations is not covered by this warranty.

If subject to abnormal conditions, the products should be removed immediately and replaced once conditions are normal.

What are the environmental limitations?

CLIMAPlus Ultra Ceilings Prior to, during, and after installation, the ceiling tiles or panels shall be maintained within the following conditions and free of chemical fumes or vibration. These products include:

60-104 °F (16-40 °C) up to 95% RH	
ASTRO CLIMAPlus	MILLENNIA® CLIMAPlus
ASTRO CLIMAPlus Illusion	MILLENNIA CLIMAPlus High NRC
ECLIPSE CLIMAPlus	MILLENNIA CLIMAPlus Illusion
ECLIPSE CLIMAPlus Illusion and Pedestals	ORION™ 270 CLIMAPlus
MARS™ CLIMAPlus	

CLIMAPlus Ceilings Prior to, during, and after installation, the ceiling tiles or panels shall be maintained within the following conditions and free of chemical fumes² or vibration. These products include:

60-90 °F (16-32 °C) up to 90% RH	60-104 °F (16-40 °C) up to 90% RH	60-104 °F (16-40 °C) up to 95% RH	60-104 °F (16-40 °C) up to 100% RH
ORION 210 CLIMAPlus	BRIO CLIMAPlus	HALCYON™ CLIMAPlus	RADAR Ceramic CLIMAPlus ¹
	CLEAN ROOM™ CLIMAPlus Class 100	PREMIER NUBBY™ CLIMAPlus	
	CLEAN ROOM CLIMAPlus Class 10M-100M	PREMIER HI-LITE™ CLIMAPlus Twill	
	FRESCO CLIMAPlus	PREMIER HI-LITE CLIMAPlus Kapok	
	FROST CLIMAPlus		
	SHEETROCK Lay-In Ceiling Panel CLIMAPlus, CLEAN ROOM		
	SHEETROCK Lay-In Ceiling Panel CLIMAPlus		
	OLYMPIA MICRO™ CLIMAPlus		
	OLYMPIA MICRO CLIMAPlus Illusion		
	RADAR™ CLIMAPlus		
	RADAR CLIMAPlus Illusion		
	RADAR CLIMAPlus High-Durability		
	RADAR CLIMAPlus High NRC/High CAC		
	ROCK FACE® CLIMAPlus		
	SANDRIFT CLIMAPlus		
	SUMMIT CLIMAPlus		
	TOUCHSTONE™ CLIMAPlus		
	TRUE™ CLIMAPlus		

Standard Commercial Ceilings Prior to, during, and after installation the ceiling tiles or panels shall be maintained free of chemical fumes, vibration, and within a temperature range of 60-85 °F (16-29 °C). Relative humidity shall not exceed 70%.

CLIMAPlus Superior Performance Products The ceiling should be maintained to avoid excessive dirt or dust buildup that would provide a media for microbial growth on ceiling panels protected with USG's patented anti-microbial treatment. Microbial protection does not extend beyond the treated surface as received from the factory, and does not protect other materials that contact the treated surface such as supported insulation materials.

Note

1. RADAR Ceramic ceiling panels with CLIMAPlus performance will withstand corrosive chemical fumes and contain coatings and/or a formulation to inhibit or retard the growth of mold and mildew.

Warranties and Limitations

Suspension Systems Prior to, during, and after installation, the suspension systems (excluding DXLA™, AX™, ZXLA™ and the USG drywall suspension system) shall be maintained in a temperature range of 60-104 °F (16-40 °C) and relative humidity shall not exceed 90%. DXLA shall be maintained in a temperature range of 60-104 °F (16-40 °C) and relative humidity shall not exceed 95%. AX, ZXLA and the USG drywall suspension system shall be maintained in a temperature range from 60-104 °F (16-40 °C) and relative humidity can be up to 100%. The warranty does not cover rusting that occurs from building leaks or condensation.

General notes

The ceiling panels must not be used to support any material including insulation. Where insulation must be used, it should be no heavier than 0.26 lbs./sq. ft. and installed with the following USG recommendations: insulation must be applied perpendicular to the suspension cross tees with the suspension system supporting the weight of the insulation. Insulation is also not recommended to be used as follows: with FIRECODE® panels, unless specified and use described by Underwriters Laboratories, Inc. Mold or mildew growth on insulation or placed above the ceiling panel or tile are not covered by this warranty.

This warranty does not cover damage caused by fire, water, accident, or by any form of abuse except normal wear and tear.

Please see USG written instructions about proper maintenance, touch up, and repainting of our ceiling systems. Please note that not all products can be repainted and that repainting will affect acoustical performance, appearance, microbial resistance, fire resistance, and ventilation through the ceiling panels or tiles.

Normal environmental conditions must prevail to warrant product performance. This warranty will not cover situations where the panels are subject to vibrations or chemical fumes or where moisture comes in contact with the ceiling panel or tile as a result of a leaking roof, a sweating pipe, a leaking radiator, a flood, condensation on windows, condensation on more subtle surfaces where dew points are reached, humidified air from the HVAC system or any other similar causes.

How do you get service?

You must notify USG of the problem within 30 days of the time the problem first became apparent to you at the following address: USG Interiors, Inc., 550 West Adams Street, Chicago, IL 60661. Please send us any photographs of the problem area as these are often helpful. (Or, call us at 800-950-3839.) We will contact you within 30 days and, if we authorize a replacement or payment, that will be done within 30 days thereafter.

How does state law apply?

This warranty gives you specific legal rights and you may also have other rights, which vary from state to state.

Replacement or refunding the purchase price of defective material shall constitute the sole and total obligation of USG. We shall not be responsible for any labor charges or other installation or replacement costs or for incidental or consequential damages of any nature whatsoever. THIS WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER WARRANTIES NOT EXPRESSLY SET FORTH HEREIN, WHETHER IMPLIED BY OPERATION OF LAW OR OTHERWISE, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS.

Notice

We shall not be liable for incidental and consequential damages, directly or indirectly sustained, nor for any loss caused by application of these goods not in accordance with current printed instructions or for other than the intended use. Our liability is expressly limited to replacement of defective goods. Any claim shall be deemed waived unless made in writing to us within thirty (30) days from date it was or reasonably should have been discovered.

Safety First!

Follow good safety and industrial hygiene practices during handling and installing of all products and systems. Take necessary precautions and wear the appropriate personal protective equipment as needed. Read material safety data sheets and related literature on products before specification and/or installation.
