TORRES

## The Ultimate Complement

Torres lights quietly take their place within a composition—a beautiful complement to urban landscapes and traditional and contemporary architecture. Designer Rodrigo Torres took an iconic streetlight design and shaped it into a sleek, elongated form with both rational and expressive character. The introvert that makes an impression.

### **A Family Of Individual Personalities**

A graceful, minimalist design is the common language among the area, path, wall, and catenary lights that comprise the Torres line. While the lights share a resemblance, each light's LED array and optics are designed for their individual applications.

The pole-mounted area light is available in two sizes, in single, dual and staggered configurations, and with 12', 14', 16', 20', and 25' pole heights. A 3' tall path light, wall light, and catenary light round out the family. Lights have cast aluminum frames with a powdercoat finish and are offered in a selection of colors.

## An Intelligent Performance

Rodrigo Torres and Landscape Forms in collaboration with lighting designer Chip Israel engineered a luminaire with advanced performance in a compact space. Each luminaire offers superior visibility, minimal glare, and no uplighting. The luminaire's output, aiming angles, high color rendering, and warm white light create a sense of comfort and security. LED technology accommodates adaptive lighting and complies with occupancy codes.

## A Lasting Design

Energy efficiency is a recognized advantage of LED technology, but the ecological benefits of Torres extend to the line's high quality, designed for longevity and sustainability. Light components are serviceable, LED cartridges are replaceable, and aluminum and steel materials are recyclable. The tenon-mounted luminaires can be fit to existing poles.
