

UNIFRAME ROLLAWAY TABLE

Operating Instructions

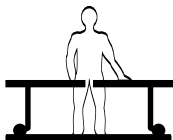

Round, Oval, Square, Hexagonal, Octagonal or
Round Stand-up Height
(UFRD, UFOV, UFSQ, UFHX, UFOC, UFSU)

TO OPEN

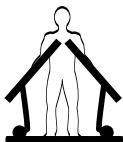

1. Find an appropriately sized area for opening of table. Be sure there are no small children, people or obstacles which could accidentally be injured or damaged by opening table.

2. While standing on either side of table, push table halves apart by applying an outward force to the center of each top. For safety, the gravity lock should engage at a semi-open position. With one hand, release the gravity lock. It may be necessary to lift slightly on table top to disengage gravity lock. Allow table to open until gravity lock engages.

WARNING: Failure to keep hands away from closing top center edges may result in serious injury.

WARNING: Failure to ensure gravity lock engagement may cause table to become unstable with possibility of serious injury.

TO CLOSE

1. Push down gently on top at table center and lift (turn) gravity lock from either side of table. While holding gravity lock, apply an upward force until table folds to storage position.
