Eames® Molded Fiberglass Stool

Designer

Charles and Ray Eames

Original Production Date

2015

Warranty

5 Years

Eames Stools represent the evolution of Charles and Ray Eames' iterative process, which continually pushed the boundaries of what a single-shell chair could be. The familiar form of the Eames Molded Fiberglass shell sits atop a 4-leg base design that makes it an ideal seating option at bar- or counter-height surfaces. Thanks to advances in safe fiberglass composition, the Eameses' distinctive single-shell form is safely produced by means of a less volatile, monomer-free "dry bind" process.

The process for making shells and the nature of fiberglass give each shell unique character traits that may include some surface cavities, areas of lighter or darker color, or faint circular shadows where stool base is attached to shell. Available in a choice of archival colors, the fiberglass shell can also be upholstered in an array of textiles or outfitted with an upholstered seat pad for enhanced comfort."
